

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned backend developer with over 8 years of experience designing scalable systems using Python, FastAPI, and Django. Proven success in building cloud-native APIs, integrating AI/ML pipelines, and driving microservice architectures in remote, agile environments. Experienced across HR tech, martech, and platform development with solid proficiency in PostgreSQL, Docker, and AWS. Passionate about clean code, system security, and high-performance backend infrastructure.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, Go, Node.js, TypeScript
- **Frameworks:** FastAPI, Django, Flask, Express.js
- **Databases:** PostgreSQL, MongoDB, Redis, MySQL
- **DevOps & Cloud:** AWS (EC2, S3, Lambda), GCP, Docker, GitHub Actions, CI/CD
- **Tools:** Git, Jira, Swagger/OpenAPI, Postman, Nginx
- **Architectures:** Microservices, REST APIs, Serverless, Event-Driven Systems
- **Other:** Pytest, Celery, OAuth2, JWT, GraphQL (basic)

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented backend APIs using FastAPI and Django, supporting customer onboarding and analytics for B2B platforms with modular, scalable architecture.
- Optimized PostgreSQL database queries and indexing strategies to reduce average response latency by 37% across key endpoints under high traffic conditions.
- Developed secure REST APIs with OAuth2 and JWT authentication for client-facing platforms, ensuring role-based access control aligned with ISO security standards.
- Integrated third-party APIs including ATS and CRM tools to automate business processes, reducing manual workloads for client operations teams by 50%.
- Collaborated with frontend and AI teams to deliver NLP-based candidate scoring modules integrated through asynchronous task queues and caching via Redis.
- Automated deployment pipelines using GitHub Actions and Docker, implementing staging workflows and environment-specific secrets with minimal manual intervention.
- Conducted peer code reviews and led architectural decisions for multi-tenant systems, supporting 20+ enterprise clients across Europe.
- Mentored 4 junior developers through biweekly 1:1s, code review sessions, and career roadmap guidance aligned with technical team growth.

Syscom Digital
Software Engineer
October 2019 – August 2021
Bucharest, Romania

- Developed backend services in Django and integrated Redis for in-memory data caching, reducing system load during national ad campaign events by over 45%.
- Built a microservice to handle marketing automation events, integrating with multiple data pipelines using Celery and RabbitMQ to ensure reliable async processing.
- Migrated legacy codebase from monolithic PHP stack to modular Django REST services, improving maintainability and feature deployment velocity by 60%.
- Designed and deployed a scalable AWS S3-based asset management system with signed URL access for secure and efficient file distribution.
- Implemented Swagger documentation for all internal APIs to standardize developer onboarding and reduce integration time for new campaigns by 30%.
- Secured sensitive user data through encryption, audit logging, and input validation, achieving full GDPR compliance across all production services.
- Designed complex SQL queries and schema for customer tracking systems using PostgreSQL and implemented triggers for real-time updates.
- Deployed Dockerized services to AWS ECS for enhanced isolation and portability across QA and production environments.

Soft Build
Software Developer
June 2016 – July 2019
Timișoara, Romania

- Built custom Django-based CMS platforms for real estate and educational clients with admin dashboards, search filters, and geo-tagged content support.
- Implemented automated CI/CD pipelines using GitLab CI and Docker, standardizing deployments and reducing production bug rate by 40%.
- Developed APIs to support mobile applications using Django REST Framework and ensured backward compatibility through robust versioning.
- Integrated external services (payment processors, SMS gateways) with webhooks for synchronous and asynchronous workflows.
- Refactored authentication systems to support social logins (Google, Facebook) and improved password hashing mechanisms for added security.
- Designed and implemented role-based access control with permission hierarchies, enabling fine-grained user authorization at feature and resource levels.
- Collaborated with UI designers to create seamless data models aligned with frontend requirements, leading to faster page loads and better UX.
- Led a taskforce to identify and resolve infrastructure bottlenecks that improved server uptime and response consistency.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Created Python microservices to support internal analytics tooling using Flask and PostgreSQL, delivering actionable insights on product KPIs.
- Wrote unit and integration tests with Pytest and FactoryBoy, achieving over 85% coverage across core services.

- Deployed internal tools using Docker containers for isolated development environments and reproducibility.
- Participated in daily standups and sprint reviews, delivering prioritized features on time in a Scrum team of 6 developers.
- Built data ETL pipelines for ingesting XML/JSON data from external APIs, ensuring schema normalization and timestamp-based tracking.
- Integrated logging and monitoring with Prometheus and Grafana dashboards for real-time insights into backend metrics.
- Refactored monolithic services into separate API endpoints to decouple concerns and improve request handling latency.
- Documented system architecture diagrams and database schemas for client handover and team reference.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in developing REST APIs using Django and SQLite for a school management system with user role segmentation and grade tracking modules.
- Created data import modules using pandas for seamless CSV data uploads into relational databases with error handling and validation rules.
- Improved internal tools by integrating web scraping scripts that provided aggregated market information for decision support systems.
- Participated in weekly pair programming sessions with senior engineers to enhance backend logic and ensure coding standards.
- Helped refactor UI-backend interaction points for AJAX-based asynchronous updates, improving overall frontend responsiveness.
- Contributed to improving test coverage by writing unit tests for business logic and database operations.
- Researched and presented a proof-of-concept implementation of full-text search using PostgreSQL's `tsvector`.
- Supported deployment automation tasks, gaining early exposure to containerization tools and CI/CD fundamentals.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Cloud Practitioner – Amazon Web Services (2024)
 - ❖ Python for Everybody Specialization – University of Michigan (Coursera, 2023)
 - ❖ Secure Coding Practices – Open Web Application Security Project (OWASP, 2023)
 - ❖ Backend Development with Django – Udemy (2022)
-

PROJECTS

✓ **AI Candidate Matcher**

- Developed backend logic for an AI-driven candidate-job matcher using FastAPI, Redis, and PostgreSQL, processing real-time profile updates and scoring with ML API integration.

✓ **HR Data Sync Engine**

- Built microservices for syncing data between ATS, CRM, and internal databases with conflict resolution, batch import/export, and API rate limit handling.

✓ **Interview Feedback Aggregator**

- Created a service to collect and process structured and unstructured feedback from multiple interview stages, integrating sentiment analysis via external ML API.
