

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Highly experienced Software Engineer with 8+ years delivering data-intensive, high-performance software systems using Python and modern data stack technologies. Proven track record building robust data pipelines, integrating complex market data feeds, and optimizing performance across analytics workflows. Passionate about creating advanced data visualizations that drive decision-making. Strong hands-on expertise in Pandas, Numpy, Polars, Airflow, and visualization tools like Plotly and Streamlit. A proactive problem solver who thrives in fast-paced, remote-first environments.

TECHNICAL SKILLS

- **Languages:** Python, SQL, JavaScript, Bash
- **Frameworks & Libraries:** Pandas, Numpy, Polars, Scipy, Matplotlib, Plotly, Seaborn, Streamlit, Dash
- **Data Pipelines & Orchestration:** Apache Airflow, Prefect, Luigi
- **Databases:** PostgreSQL, MySQL, SQLite, MongoDB
- **Tools & Platforms:** Docker, Git, AWS (S3, Lambda), Linux, VS Code, Jupyter
- **Practices:** CI/CD, Agile/Scrum, Test-Driven Development (TDD), Code Review, REST APIs

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and deployed distributed data ingestion pipelines handling real-time market data streams from multiple providers, reducing latency by over 35%.
- Led the integration of Polars and Numpy for high-throughput data transformation workflows, improving batch data processing performance by 50%.
- Built interactive dashboards and visual analytics tools using Plotly Dash and Streamlit for financial data inspection, enabling stakeholders to self-serve insights.
- Automated ETL workflows using Apache Airflow with robust DAG management, retries, SLA alerts, and S3-based archiving strategies.
- Refactored existing data-heavy microservices with a focus on memory profiling and garbage collection tuning, optimizing memory usage by 40%.
- Developed fault-tolerant modules for integrating third-party APIs for economic indicators and real-time tick data, ensuring 99.9% uptime.

- Collaborated with frontend and business teams to convert quantitative signals into visual widgets for traders and analysts.
- Mentored junior engineers in Python data modeling, debugging techniques, and Jupyter notebook-based prototyping.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed RESTful APIs and backend services using Python Flask to serve analytics and customer data from PostgreSQL and MongoDB.
- Created automated data cleaning and transformation modules using Pandas, Scikit-learn pipelines, and NumPy vectorized functions.
- Implemented Apache Airflow DAGs to monitor social campaign performance KPIs and update visualization dashboards hourly.
- Built custom analytics dashboards using Streamlit and Seaborn to visualize campaign impressions, CTR, and ROI trends.
- Integrated real-time social media feed analytics and applied keyword-based sentiment scoring for campaign intelligence.
- Designed schema versioning mechanism for evolving JSON-based data contracts to support multi-region clients.
- Leveraged Docker for packaging and orchestrating microservices for better dev/staging parity.
- Conducted internal workshops on Python for data engineers and introduced best practices in handling time-series datasets.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Engineered robust batch data ingestion pipelines using Python and SQLite to consolidate property transaction records from various agencies.
- Developed automated scripts with Pandas and ExcelWriter to export property insights for weekly executive reporting.
- Used NumPy and Scipy to develop a spatial clustering model that grouped property listings by amenities and pricing brackets.
- Enhanced data consistency by building a deduplication engine that used fuzzy matching and rule-based filters.
- Integrated Matplotlib and custom SVG generation scripts for printable property brochures with embedded charts.
- Implemented alerting modules to detect outliers in listing price changes or duplicate entries.
- Introduced Git and CI workflows to standardize deployment and testing of data scripts across dev teams.
- Collaborated with marketing analysts to prototype feature-rich real estate market overview dashboards.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Participated in the design of analytics interfaces and backend APIs using Python Flask and SQLAlchemy ORM.
- Built Python scripts for extracting, transforming, and joining datasets from XML-based partner feeds.
- Created PDF-based monthly performance reports using matplotlib and reportlab libraries.
- Maintained internal web tools to manage client dashboards and adjusted metrics using user feedback.
- Deployed early ETL scripts to a VPS with cron jobs for daily refresh cycles.
- Assisted in building data schema migration tools using Alembic and YAML templates.
- Supported early-stage DevOps practices using GitLab CI and basic Ansible playbooks.
- Participated in agile ceremonies, giving demo presentations for each sprint deliverable.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Developed utility Python scripts to clean and normalize Excel reports from industrial data logs.
- Built web-based UI using Flask and jQuery to explore archived log data from manufacturing sensors.
- Automated backup and sync procedures for critical CSV datasets using rsync and shell scripting.
- Participated in proof-of-concept visualization modules to track production KPIs over time.
- Documented data mappings between legacy ERP exports and new analytics system.
- Provided Python-based QA scripts to validate format compliance in uploaded data files.
- Designed and implemented initial PostgreSQL schemas and indexes for better query performance.
- Assisted senior engineers in designing scalable ETL workflows for sensor data tracking.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Data Engineering with Google Cloud** – Coursera (2023)
 - ❖ **Python Data Science Toolbox (Part 1 & 2)** – DataCamp
 - ❖ **Building Data Pipelines in Python** – Pluralsight
 - ❖ **Apache Airflow Fundamentals** – Astronomer Academy
-

PROJECTS

- ✓ **Market Analytics Dashboard (2023)**
Built a web app using Streamlit and Plotly to display live market trends and volatility measures for multiple stock indices. Integrated data from Alpha Vantage API and visualized metrics like RSI, moving averages, and sentiment scores.
- ✓ **Automated ETF Feed Ingestor (2022)**
Designed a fault-tolerant feed reader in Python using Airflow that pulled ETF NAV data daily, validated schema using Pydantic, and stored records in PostgreSQL for use in internal research models.
- ✓ **Polars-powered CSV Optimizer (2024)**
Developed a CLI tool using Polars to clean, compress, and analyze massive CSVs for downstream ML pipelines. Benchmarked 5x faster execution over Pandas in key operations.
