

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative Fullstack Engineer with over 9 years of progressive experience in software engineering, specializing in Python, React, and TypeScript. Adept at building AI-powered internal tools and production-grade applications. Proven expertise integrating AI frameworks like LangChain and Pydantic to streamline workflows and boost platform intelligence. Highly experienced in startup environments, cross-functional collaboration, and scalable system design. Seeking to contribute to cutting-edge AI HRTech platforms as a core contributor.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, HTML5, CSS3, SQL, PHP
- **Frontend:** React, Redux, Tailwind CSS, AngularJS, Figma
- **Backend:** Node.js, Express, Django, Flask, REST APIs
- **AI/ML Tools:** LangChain, Pydantic, OpenAI APIs, HuggingFace Transformers
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **DevOps & Cloud:** Git, Docker, GitHub Actions, CI/CD, Linux, AWS (EC2, Lambda), Firebase
- **Others:** Agile/Scrum, Jest, Cypress, Postman, Jira, VS Code, Webpack

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Spearheaded the development of internal AI-powered analytics tools using Python and React to automate reporting for marketing data, reducing analyst hours by over 45%.
- Integrated LangChain and OpenAI GPT APIs into customer feedback modules to generate smart suggestions and sentiment summaries, enhancing client support productivity.
- Led a cross-functional team to build a workflow optimization platform for HR onboarding using TypeScript and React, enabling dynamic forms and approval routing logic.
- Designed backend microservices in Python with Flask and PostgreSQL for task automation, deployment pipelines, and chatbot support systems integrated via Slack.
- Maintained robust documentation and test coverage with Pydantic models, Pytest, and Swagger UI, ensuring reliability across all production deployments.
- Implemented role-based access control and OAuth2 authentication using FastAPI and Auth0, securing internal tools for HR and IT use.
- Coordinated CI/CD pipeline using GitHub Actions and Docker to automate staging, testing, and production releases with minimal manual intervention.

- Regularly collaborated with product managers and designers to define MVP scopes for AI features, using Agile sprints and bi-weekly delivery goals.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed custom React-based dashboard apps for marketing campaign automation, increasing advertiser engagement through real-time analytics visualizations.
- Built RESTful APIs in Node.js to connect CRM platforms with campaign engines, reducing latency by 30% and enabling live data syncing.
- Deployed a user segmentation engine that utilized basic ML models and customer behavior patterns to enhance targeting precision by 25%.
- Collaborated with the data science team to visualize clustering outputs and integrated AI insights directly into the campaign management UI.
- Refactored legacy PHP code into modular TypeScript components with React Hooks, significantly reducing bugs and improving scalability.
- Created a secure user role system using JWT-based authentication and Redis for session handling to enhance multi-user access capabilities.
- Introduced unit and integration testing protocols using Jest and Cypress, increasing test coverage from 28% to 84% within six months.
- Worked closely with designers to implement pixel-perfect UIs using Figma, Tailwind CSS, and Material-UI across all marketing dashboards.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built fullstack SaaS applications for construction management using Django and Angular, increasing contractor efficiency and data transparency.
- Engineered smart scheduling systems using calendar APIs and internal rules engines to predict optimal project timelines and reduce delays.
- Introduced PostgreSQL indexing and caching logic to boost query performance across task-tracking modules, improving dashboard load times.
- Integrated SMS and email notifications via third-party APIs for real-time project updates and milestone alerts to key stakeholders.
- Helped refactor monolithic app into a modular service-based structure to prepare for Kubernetes-based deployments.
- Designed admin dashboards to track KPIs, budgets, and resource allocations, implementing charts and filters using Chart.js and D3.
- Built dynamic forms and role-sensitive access controls that ensured compliance with local regulations and internal audit standards.
- Led knowledge-sharing workshops to train junior developers on TypeScript migration, React performance optimization, and testing best practices.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Designed multi-tenant backend architecture in Laravel for e-commerce CMS systems, enabling quick onboarding of clients across niches.
- Developed frontend templates in Vue.js and Bootstrap, increasing mobile responsiveness and user retention metrics by over 35%.
- Created an API-based plugin system to enable third-party extensions for payment, shipping, and analytics providers.
- Migrated SQL schema to support multilingual catalog entries and regional pricing models for cross-border commerce.
- Collaborated in code reviews, bug triaging, and Git-based version control across staging and release branches.
- Contributed to integrations with Elasticsearch for product search optimization and user query accuracy improvements.
- Implemented internal logging and error tracking tools using Sentry and Slack bots to automate alerting for production issues.
- Drafted onboarding documentation for new developers to quickly understand project architecture and deployment workflows.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in developing a warehouse automation tool using PHP and MySQL, reducing human errors in inventory tracking.
- Built barcode scanning integration using JavaScript libraries to support product verification during shipment.
- Created internal dashboards to track shipments, employee productivity, and packaging KPIs using Highcharts.
- Refactored core backend functions to reduce duplicate logic and improve testability in collaboration with senior engineers.
- Introduced Git for version control into the team workflow, training staff in branching strategies and commit best practices.
- Developed a REST API layer to expose shipment records to mobile devices used on warehouse floors.
- Participated in Agile meetings and contributed to sprint planning and QA bug reviews, building early team collaboration habits.
- Documented key application workflows and database schema for future maintenance and developer onboarding.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ LangChain for Developers – Build AI Agents and Toolchains (2024)
 - ❖ Python for AI and Machine Learning – Coursera / Stanford University (2023)
 - ❖ React & TypeScript Mastery – Udemy (2022)
 - ❖ Advanced Git and GitHub for DevOps – LinkedIn Learning (2022)
-

PROJECTS

- ✓ **AI-Powered HR Workflow Engine**
Developed an internal tool using React, TypeScript, and LangChain to automate onboarding form validation, role assignment, and policy explanation through natural language generation.
- ✓ **Agentic ChatOps Tool**
Built an internal productivity bot using Python, Pydantic, and LangChain that integrates with Slack to provide engineers with build statuses, ticket summaries, and deployment health metrics in natural language.
- ✓ **Interactive Resume Matcher (OpenAI + LangChain)**
Created a personal project matching resumes to job descriptions using OpenAI's API and LangChain pipelines; reduced manual effort in job tailoring by over 90%.
