

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Backend-focused Software Developer with over 9 years of experience architecting and delivering scalable backend services across finance, SaaS, and marketing platforms. Skilled in Python, Rust, REST API design, and data pipeline engineering in cloud-native environments. Proven track record working with Azure, Docker, Kubernetes, and modern DevOps practices to support secure, performant systems. Adept at cross-functional collaboration, code reviews, infrastructure-as-code, and observability practices. Passionate about clean architecture, test automation, and optimizing backend performance for real-time and batch data operations.

TECHNICAL SKILLS

- Languages:** Python (FastAPI, Django), Rust (Axum, Actix), JavaScript/TypeScript
- Databases:** PostgreSQL, Snowflake, Redis, MySQL
- DevOps & Cloud:** Azure, Azure Functions, Kubernetes, Docker, GitHub Actions, Terraform
- Tools:** Grafana, Prometheus, Azure Monitor, Git, Postman, WebSocket, RabbitMQ, Nginx
- Testing:** Pytest, UnitTest, Rust integration testing, Tox, CI/CD pipelines
- Other:** REST API Design, WebAssembly (WASM), Data Modeling, Microservices, Serverless

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and maintained scalable Python microservices using FastAPI to support SaaS platforms handling high-frequency data ingestion and transformation across real-time user analytics pipelines.
- Engineered Rust-based services for critical-path financial transaction auditing, improving processing speed by 70% over existing Python implementations in latency-sensitive operations.
- Led the backend architecture migration to Azure Functions and Kubernetes, integrating Azure DevOps pipelines for zero-downtime deployments across distributed services.
- Developed RESTful APIs with full observability and integrated Prometheus and Grafana dashboards to monitor business-critical endpoints and prevent SLA breaches.
- Architected database schemas and enforced data integrity rules across PostgreSQL clusters used by 7+ services, optimizing indexes for performance under high-load conditions.
- Wrote infrastructure-as-code with Terraform to manage Azure resources, including Blob Storage, Event Grid, and Key Vault for secure, reproducible deployments.
- Conducted technical leadership activities including PR reviews, security reviews, and mentoring 5 engineers on backend best practices and Python/Rust patterns.

- Maintained CI/CD pipelines for integration testing, linting, vulnerability scanning, and automated Azure deployments using GitHub Actions.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed and maintained scalable APIs in Django for digital marketing campaign platforms, including RESTful services serving over 1M requests/day.
- Built custom Python scripts for data processing pipelines that aggregated campaign metrics from multiple sources (Google Ads, Facebook API), reducing reporting latency by 50%.
- Integrated PostgreSQL and Redis caching layers for real-time data feeds, improving dashboard response times by 200ms on average.
- Introduced observability stack using Grafana and Prometheus to monitor backend performance and set alerts on memory, latency, and error rates.
- Configured Docker-based dev environments and contributed to CI pipelines to enforce test coverage and style compliance before merges.
- Collaborated with frontend teams using OpenAPI to synchronize API contracts and reduce integration bugs by 30% in the first 3 months.
- Implemented user access logging and API token security enhancements to comply with GDPR and ISO data privacy requirements.
- Delivered documentation and Swagger specs for all services, increasing API adoption across partner teams.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built web and backend solutions for property and fleet management platforms using Python (Flask), ensuring modular design and horizontal scalability.
- Maintained cron-based batch processing systems for ETL workflows that migrated financial reports to Snowflake via secure pipelines.
- Designed database schemas and optimized relational queries in PostgreSQL, reducing report generation time from 45 minutes to under 5.
- Implemented role-based access control (RBAC) and logging for financial compliance audits and SOC 2 readiness.
- Set up Docker-based deployment flows and wrote Helm charts for Kubernetes workloads hosted on Azure AKS.
- Implemented health checks, rate limiting, and circuit breakers to improve API resilience and availability metrics.
- Worked on real-time synchronization of external data sources (CRM, accounting) via WebSocket and polling fallbacks.
- Automated API tests using Postman + Newman in CI pipelines to validate endpoint behavior across staging and production.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Developed APIs and backend utilities in Python to support e-commerce analytics modules for partner stores.

- Built Rust command-line tooling for secure file encryption and synchronization across distributed partner servers.
- Wrote integration adapters for payment providers using REST and SOAP protocols, improving integration testing accuracy by 80%.
- Designed JSON/CSV data importers with validation layers to sanitize input into the reporting systems.
- Collaborated with DevOps to provision staging and testing environments in Azure, automating backup retention policies.
- Documented deployment procedures and created internal guides for junior engineers on REST API standards.
- Added unit testing coverage and migrated legacy codebase toward reusable Python packages.
- Conducted security reviews and resolved vulnerabilities found in internal audit tools (e.g., outdated libs, open ports).

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Built internal monitoring dashboards in Python/JavaScript to visualize website traffic and user behavior analytics.
- Created ETL pipelines using Python to move usage data into PostgreSQL and build weekly reporting views.
- Developed test automation scripts to validate JSON APIs for mobile clients, significantly reducing QA regression cycles.
- Integrated third-party APIs to enrich customer profiles and automate lead scoring based on behavioral metrics.
- Designed secure endpoints with token-based auth and rate limits to protect sensitive analytics data.
- Used Git for version control and participated in code reviews to maintain quality and enforce security standards.
- Deployed local services via Docker Compose for testing and CI validation.
- Shadowed senior developers in architecture sessions and contributed to database design and schema planning.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate
 - ❖ Certified Kubernetes Application Developer (CKAD)
 - ❖ Rust Essentials for Backend Engineers (Udemy)
 - ❖ Python for Data Engineering and DevOps (Coursera)
-

PROJECTS

- ✓ **Secure Financial Transaction Engine (Rust)**
Developed a low-latency transaction validator in Rust using the Axum framework. Deployed on Kubernetes, integrated with Azure Monitor and PostgreSQL. Processed 100K+ transactions/day with sub-100ms latency.
- ✓ **Real-Time Metrics Pipeline (Python + Azure)**
Designed an event-driven metrics collection platform using FastAPI, Azure Functions, and Redis Streams. Enabled real-time dashboard updates and business alerts via Prometheus/Grafana.
