

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with over 8 years of hands-on experience designing and developing cloud-native backend applications with a focus on scalable microservices, serverless architecture, and real-time systems. Proven ability to deliver production-grade Python-based SaaS platforms using AWS, Docker, WebSockets, PostgreSQL, and Redis. Adept in modern software engineering principles and committed to building robust, maintainable, and secure solutions. Passionate about innovative technologies including ASR, NLP, and media streaming.

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, Node.js
- **Cloud Platforms:** AWS (Lambda, S3, EC2, API Gateway), GCP (basic)
- **Databases:** PostgreSQL, Redis, MongoDB, MySQL
- **Frameworks/Libraries:** FastAPI, Flask, Django, React.js
- **DevOps & Tools:** Docker, Git, GitHub Actions, Jenkins, Terraform
- **Architectures:** Microservices, Serverless, SaaS, Event-Driven
- **Protocols & Communication:** HTTP, WebSockets, WebRTC, REST, JSON
- **Others:** CI/CD, Unit Testing, Agile/Scrum, Linux

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Led the development of scalable backend services using Python and AWS Lambda, enhancing performance and reducing latency for critical services by 37%.
- Architected microservices and serverless functions enabling real-time document processing workflows using WebSockets and AWS Step Functions.
- Integrated Redis and PostgreSQL for efficient session storage, data caching, and transactional support across distributed services.
- Created CI/CD pipelines with Docker and GitHub Actions, improving delivery speed and deployment safety across environments.
- Collaborated with frontend and NLP teams to expose backend APIs for transcription and real-time media annotation features.
- Implemented data pipelines for ASR data post-processing and analytics using AWS Glue and S3.
- Mentored junior engineers on clean coding practices, cloud architecture patterns, and debugging techniques.

- Participated in architecture review and strategic planning meetings with stakeholders and R&D leaders.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed and maintained backend services in Python using Flask and Docker, supporting real-time campaign data for thousands of users.
- Migrated legacy codebase into a cloud-native solution on AWS with decoupled services using Lambda and API Gateway.
- Built WebSocket-based communication modules for live chat and push notification features in the platform.
- Designed Redis caching layers to reduce query loads and enable faster response times across mobile and web clients.
- Integrated external APIs and data pipelines for marketing analytics and real-time campaign metrics aggregation.
- Ensured backend modules passed performance, security, and integration testing standards in a CI pipeline.
- Collaborated closely with the design and QA teams to iterate on data-intensive user experiences.
- Applied observability tools including CloudWatch and Sentry for tracking API health and reducing incident resolution time.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Delivered core backend services using Django and PostgreSQL for a SaaS platform serving logistics clients with high availability.
- Engineered real-time shipment tracking features using WebSockets and REST APIs for desktop and mobile interfaces.
- Refactored monolithic codebases into modular services and containerized them using Docker for easier deployment and testing.
- Improved application scalability by optimizing database queries and introducing Redis-based caching mechanisms.
- Collaborated on frontend integration tasks using React, ensuring clean API contracts and quick feedback loops.
- Integrated third-party logistics and e-invoicing APIs with comprehensive error handling and resilience.
- Introduced unit and integration test coverage to mission-critical features, reducing bugs and regressions.
- Participated in code reviews, backlog grooming, and scrum-based delivery cadences.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Assisted in building an internal CMS system with Flask and AngularJS, tailored for marketing campaign orchestration.

- Developed secure API endpoints and user authentication flows with JWT and OAuth2 for multi-tenant clients.
- Designed and documented RESTful APIs, facilitating frontend consumption and external integration with partner tools.
- Deployed microservices using Docker containers and managed their lifecycle in a controlled test environment.
- Built modules for file upload, image processing, and cloud storage integration using AWS S3.
- Wrote custom management scripts and batch processing jobs in Python for content automation.
- Tuned PostgreSQL queries and indexing for better report generation performance.
- Worked closely with QA for regression testing and bug tracking during pre-release cycles.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Supported senior developers in backend development using Python and Flask for a content publishing system.
- Created automation scripts for media file transformation and metadata generation using FFmpeg and Python.
- Integrated Redis to queue and throttle background tasks, improving batch processing efficiency.
- Built simple frontend components to visualize backend APIs using jQuery and Bootstrap.
- Participated in sprint planning, retrospective meetings, and documentation reviews.
- Contributed to API design and handled edge cases related to media parsing and encoding.
- Researched and proposed improvements to reduce memory consumption during image uploads.
- Logged and tracked issues in JIRA while collaborating with a small international dev team.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
- ❖ Python for Everybody (University of Michigan – Coursera)
- ❖ Designing Microservices with Python (Pluralsight)
- ❖ Docker and Kubernetes: The Complete Guide (Udemy)

PROJECTS

- ✓ **Cloud-Based Transcription Platform**
Led backend development of a cloud-native transcription service using FastAPI, AWS Lambda, S3, and WebSockets. Designed the system to handle real-time transcription sessions, integrating NLP post-processing and ASR model output streams.
- ✓ **Real-Time Notification Engine**

Designed and deployed a real-time notification engine using Redis Pub/Sub and WebSocket gateways, enabling instant cross-device alerts in a multi-user SaaS platform hosted on AWS.

✓ **Serverless Media Processor**

Built a serverless media ingestion and processing pipeline on AWS using Lambda, Step Functions, and S3. Handled parallel processing of video/audio assets with resilience and fault-tolerance.
