

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Product-driven Senior Full Stack Engineer with over 9 years of experience building scalable web applications with a strong focus on clean code, API architecture, and user-centered design. Adept at working across the full stack with Python, FastAPI, Vue, React, PostgreSQL, and Docker in agile environments. Proven track record of delivering robust backend systems and seamless frontend experiences in cross-functional teams. Passionate about energy tech, data pipelines, and sustainable software practices.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, SQL, HTML, CSS
- **Frontend:** Vue.js, React, Next.js, Tailwind CSS, PrimeVue, Redux, jQuery
- **Backend:** FastAPI, Flask, Django (basic), REST APIs, Celery
- **Data & DB:** PostgreSQL, MySQL, MongoDB, Redis, Pandas, NumPy, RabbitMQ
- **ERP & Tools:** Odoo ORM, XML Views, QWeb Templates
- **DevOps:** Docker, GitHub Actions, Vercel, Heroku, DigitalOcean, CI/CD
- **Testing:** Pytest, Jest, TDD, React Testing Library
- **Workflow:** Git, JIRA, Confluence, Postman, Figma, Storybook, Zeplin

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Built and deployed scalable FastAPI backends integrated with Vue-based clients and PostgreSQL, ensuring low-latency API communication with secure JWT and OAuth2 flows.
- Designed and evolved core APIs and background task queues using Celery and RabbitMQ, enabling real-time data syncing between ERP and energy analytics platforms.
- Implemented asynchronous processing pipelines for data aggregation and reporting using Pandas and Redis caching layers to optimize performance.
- Architected CI/CD pipelines via GitHub Actions and Docker for staging and production, reducing deployment friction and increasing release confidence.
- Developed dynamic user-facing dashboards using Vue.js and Tailwind, improving UX and enabling real-time visibility into operational data.
- Interfaced with 3rd party APIs for logistics, invoice, and CRM sync, including robust retry mechanisms and data mapping routines.

Syscom Digital
Software Engineer
October 2019 – August 2021
Bucharest, Romania

- Created modern frontend UIs using React and Vue.js, interfacing with internal REST APIs and ensuring responsiveness with Tailwind CSS and PrimeVue.
- Developed scalable microservices with Python and FastAPI, with modular routing, SQLAlchemy models, and full test coverage using Pytest.
- Led integration of 3rd party APIs and transformed data streams into PostgreSQL and MongoDB, ensuring data consistency and optimal indexing.
- Refactored existing backend code to implement layered service architecture, improving maintainability and testability across multiple modules.
- Built custom Odoo modules and UI enhancements with XML views and QWeb, streamlining workflows for CRM and project management.
- Monitored and enhanced performance of key endpoints via profiling, introducing caching layers and optimizing DB queries for throughput.

Soft Build
Software Developer
June 2016 – July 2019
Timișoara, Romania

- Developed modular backend features in Python using Odoo ORM and PostgreSQL, delivering HR automation and payroll processing tools.
- Spearheaded migration of legacy workflows to modern Odoo architecture, decreasing runtime errors and simplifying custom logic extension.
- Designed REST APIs and background workers to sync data with 3rd party systems such as Mailgun, Zoho, and Google Drive.
- Containerized environments using Docker and configured daily backup + restore pipelines on Linux, ensuring resilience and fast recovery.
- Built interactive internal dashboards using Vue and vanilla JavaScript with real-time updates powered by backend event triggers.
- Provided technical documentation and mentorship to onboard junior developers into the Python/Odoo codebase.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Developed Python-based services for collecting and transforming web analytics data into PostgreSQL for business intelligence use cases.
- Supported Odoo instance migrations and conflict resolution across ERP versions, aligning business rules and database schemas.
- Built lightweight frontend enhancements using jQuery and vanilla JS within tight Odoo template constraints to modernize UI flows.
- Delivered backend scripts to fix malformed financial records in ERP, syncing journal entries with accounting consistency rules.
- Participated in sprints to modernize Python code, focusing on testability, logging, and API design patterns.
- Contributed to GitLab CI pipelines and container orchestration for staging and review deployments.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Wrote backend automation scripts in Python to assist data migration for early ERP adoption, validating files and fixing schema issues.
 - Participated in FastAPI prototype development to expose secure endpoints for account metadata and usage logs.
 - Supported Odoo prototyping with XML and JavaScript, contributing to HR and billing workflows during early-stage client adoption.
 - Developed utilities to seed test databases and mock API calls, improving dev velocity and regression test reliability.
 - Created basic UI components with vanilla JS and HTML/CSS for internal admin tools and reports.
 - Shadowed senior developers in CI/CD and learned core practices in software deployment, testing, and schema versioning.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **FastAPI for Web Development** – Udemy
Mastered building scalable and secure RESTful APIs using FastAPI, including async patterns, background tasks, and OAuth2 security.
 - ❖ **Advanced Python Programming** – Coursera
Deepened knowledge of Python 3 including design patterns, performance optimization, and data processing with Pandas and NumPy.
 - ❖ **Vue.js 3 Masterclass** – Vue Mastery
Covered component architecture, Composition API, state management with Pinia, and modern frontend testing strategies.
 - ❖ **Docker & Kubernetes for Developers** – Udemy
Focused on containerization, orchestration, and CI/CD pipelines with Docker, Kubernetes, and GitHub Actions.
 - ❖ **Asynchronous Task Processing with Celery and Redis** – Pluralsight
Learned to design, deploy, and monitor background workers in Python applications using Celery and Redis queues.
-

PROJECTS

- ✓ **Distributed Background Task Queue (Celery + FastAPI + Redis)**
Engineered a high-throughput task queue system to offload long-running data transformations and sync jobs using Celery workers, Redis broker, and FastAPI management endpoints with real-time task tracking.

✓ **Intelligent API Gateway for ERP Microservices**

Built a secure, rate-limited API gateway using FastAPI and JWT to route and monitor traffic across several ERP modules, supporting dynamic schema transformation and scalable third-party integrations.

✓ **Vue.js + Tailwind Admin Console for Energy Metrics**

Developed a responsive web application for visualizing energy grid metrics using Vue.js 3, Pinia for state, PrimeVue UI components, and Tailwind CSS for utility-first styling.

✓ **PostgreSQL Data Normalization and Analytics Engine**

Designed and implemented a modular ETL engine that consumes raw sensor data, applies rule-based normalization, and writes to structured PostgreSQL tables for dashboard consumption.

✓ **CI/CD Workflow for Monorepo (Python + JS + Odoo)**

Created an automated deployment pipeline for a monorepo housing FastAPI backends, Vue frontends, and Odoo modules using Docker, GitHub Actions, and version-tagging with rollback support.
