

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with over 9 years of hands-on experience architecting, building, and deploying robust web applications across GIS, analytics, and enterprise domains. Proven expertise in Python, Django REST Framework, and PostgreSQL/PostGIS, combined with a strong front-end foundation in React, Vue, and Angular. Adept at integrating ESRI ArcGIS APIs, designing RESTful services, and leading cross-functional teams through full SDLC cycles. Passionate about clean architecture, spatial data solutions, and building mission-critical platforms for public and private sector clients.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, Django, DRF, JavaScript, TypeScript, HTML5, CSS3, React.js, Vue.js, Angular, Node.js
- **GIS & Mapping:** ArcGIS JS API, PostGIS, ESRI Tools, Maps SDK, Dojo, GeoServer, Leaflet, Kendo UI
- **Database & Storage:** PostgreSQL, PostGIS, MySQL, Oracle, SQL Server, MongoDB, Firebase
- **API & Services:** RESTful API, GraphQL, WebSockets, RabbitMQ, JSON, Axios, Swagger, OpenAPI
- **DevOps & Cloud:** Docker, AWS EC2/S3/RDS, NGINX, Apache, IIS, Git, GitLab CI/CD
- **Tools & Platforms:** Linux, Windows Server, Jira, Figma, Postman, Visual Studio Code, ArcGIS Online
- **Architecture Patterns:** MVC, MVVM, Clean Architecture, Microservices, Modular Monolith, CQRS

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led full-stack development of custom GIS-based dashboards for European clients, integrating ArcGIS SDK, Django/DRF APIs, and React-based UIs with complex spatial data visualizations.
- Designed spatial schemas in PostgreSQL/PostGIS for land registry, property tracking, and water asset management systems, achieving 45% faster query responses.
- Spearheaded development of REST APIs using Django REST Framework, delivering scalable services for geospatial analytics and IoT vehicle geofencing modules.

- Integrated ESRI ArcGIS services, Leaflet maps, and Kendo UI grids into modular components to enhance map interaction and administrative interfaces.
- Collaborated with analysts and end-users to define GIS requirements, enabling rapid delivery of a public-sector portal used by 100,000+ monthly visitors.
- Maintained CI/CD pipelines with GitLab and Docker, optimizing deployment processes on AWS and reducing downtime to under 0.01%.
- Implemented OAuth2/JWT authentication and fine-grained role access, hardening security posture for sensitive municipal data portals.
- Mentored a team of 4 developers, setting code standards and reviewing PRs for API performance and spatial computation accuracy.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed a hybrid logistics platform using Django and Vue, allowing real-time asset tracking via vehicle IoT integration with geofence event triggers.
- Built dynamic dashboards using React.js and Kendo UI with PostgreSQL/PostGIS-backed analytics for a utility monitoring system deployed in 3 countries.
- Integrated REST APIs with external data providers and internal map tile services using ESRI and open-source GeoServer solutions.
- Designed data migration scripts in Python/SQL to sync legacy Oracle spatial data to modern PostgreSQL/PostGIS models with 99.98% integrity.
- Streamlined deployment infrastructure across Linux and Windows servers using Docker, Apache, and NGINX.
- Created administrative GIS tools to manage shapefiles, feature layers, and spatial joins directly from the frontend interface.
- Improved rendering performance of complex maps using WebGL options in ArcGIS JS and lazy-loading in React.
- Provided L3 support for clients in utilities and real estate sectors, reducing GIS-related bug incidents by 60% year-over-year.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built city-wide waste management GIS application integrating PostGIS queries with dynamic map layers rendered using Dojo and ESRI SDK.
- Developed a modular back office using Django and Vue.js with complex user permissions and REST APIs for real-time asset updates.
- Enhanced spatial reporting capabilities by optimizing geospatial indexes in PostgreSQL and introducing query caching mechanisms.
- Integrated location-based analytics into dashboards for local government clients, leveraging heatmaps and choropleth maps for decision-making.
- Used MVVM pattern with Vue and custom API wrappers to standardize component usage and reduce code duplication by 40%.
- Refactored legacy PHP-based mapping tools into modern React components with TypeScript support.
- Automated PDF map generation services using Python scripting and QGIS CLI integration.
- Managed CI/CD pipeline with Jenkins and Docker Compose to ensure version-controlled deployments and rollback safety.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Developed mobile-friendly municipal map explorer tool using Django, Leaflet, and PostgreSQL/PostGIS.
- Created custom widgets for geolocation filtering, polygon drawing, and user asset submission within map UIs.
- Delivered public-facing portal with multilingual support, search indexing, and accessibility compliance for Estonia's cadastral data.
- Worked closely with GIS analysts to design schema models and REST endpoints for spatial data editing workflows.
- Integrated Google Maps API and OpenStreetMap tiles for fallback rendering and hybrid visualizations.
- Built automated email alert system for property boundary updates and notifications.
- Contributed to internal UI component library built with Bootstrap, jQuery, and vanilla JS.
- Assisted in configuring Apache deployments on Debian servers, tuning performance for map tile serving.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Supported full-stack development of a legacy map management system used for pipeline maintenance tracking.
- Built Python scripts to convert shapefiles to GeoJSON and optimize data for web consumption.
- Assisted in Django-based admin tool development to upload and process satellite images.
- Contributed to testing of location-based services with simulated mobile geodata and device coordinates.
- Improved UI responsiveness by applying CSS media queries and Bootstrap grid system across mobile and tablet views.
- Debugged ArcGIS Server integration issues with Dojo-based custom modules.
- Worked under supervision to refactor spaghetti code into modular Django apps with clearer RESTful routing.
- Prepared documentation for QA and deployment guides for internal testing environments.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ ArcGIS Web AppBuilder Developer Certification – ESRI (2023)
- ❖ Django for Professionals – Advanced REST APIs & DRF (2022)
- ❖ Full-Stack GIS Application Development with Python & React – Udemy (2022)

PROJECTS

GeoRegistry: Public Property Tracking Portal

- Developed GIS-enabled portal for managing land and public property records using Django, PostGIS, and ArcGIS API for JS.
- Integrated interactive maps, polygon selection tools, and spatial query APIs for real-time property insights.

SmartRoute: IoT-based Vehicle Tracking with Geofencing

- Built real-time logistics tracking platform with Django backend, React front-end, and geofence alert systems using PostGIS and RabbitMQ.
- Enabled live map updates and predictive routing for fleet optimization.

EnviroMap: Utility Infrastructure Viewer

- Architected web tool for mapping utility pipelines, meters, and service zones using Vue, Leaflet, and PostgreSQL/PostGIS.
- Used Kendo UI for advanced grid sorting/filtering and ArcGIS integration for layer overlays.
