

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and highly adaptable software engineer with 8+ years of experience building scalable, AI-powered, and cloud-native systems. Specialized in Python development, LangChain, LangGraph, and Large Language Models (LLMs), with hands-on deployment on AWS using tools like Bedrock, ECS, OpenSearch, and ClickHouse. Proven track record in designing end-to-end intelligent automation workflows, collaborating with cross-functional teams, and delivering reliable AI features in production. Seeking to contribute AI expertise and engineering excellence to forward-thinking teams driving marketing intelligence and generative AI innovation.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, Java, LangChain, LangGraph, Bash, REST APIs, JavaScript, Flask, FastAPI
- **AI/ML:** Large Language Models (LLMs), AI Agents, RAG, Embeddings, Semantic Search, OpenAI, Amazon Bedrock, SageMaker
- **Databases:** MySQL, PostgreSQL, ClickHouse, MongoDB, Redis, NoSQL
- **DevOps & Infrastructure:** AWS (EC2, S3, ECS, EKS, Lambda), Docker, Kubernetes, Terraform, GitOps, CI/CD, OpenTelemetry, Prometheus, Grafana
- **Search & Observability:** OpenSearch, ELK Stack, Grafana, Datadog
- **Other Tools:** Git, GitLab, Jira, Bitbucket, Figma, Confluence, Postman

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Developed production-ready AI-powered microservices using Python and LangChain to drive marketing intelligence and user segmentation capabilities.
- Designed and deployed Retrieval-Augmented Generation (RAG) pipelines integrating LangGraph, OpenSearch, and ClickHouse for semantic content enrichment and vector search.
- Built scalable agent-assisted features utilizing AWS Bedrock, LLMs, and dynamic tool-chaining for personalized user experiences in automated marketing platforms.
- Collaborated with data scientists to operationalize ML workflows on AWS, automating deployment pipelines using Terraform, ECS, and SageMaker endpoints.
- Led backend architecture for real-time AI assistants leveraging gRPC, Redis, and Kafka queues, ensuring sub-100ms latency in response generation.

- Engineered secure REST and streaming APIs supporting tool-based automation, governed by OpenTelemetry observability and Grafana dashboards.
- Migrated and optimized relational and NoSQL data systems, integrating MySQL and ClickHouse for batch and real-time analytical workloads.
- Enforced GitOps CI/CD strategies with GitLab, Docker, and Kubernetes to streamline feature rollouts and monitoring with Prometheus and ELK stack.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Integrated AI-driven semantic search over product metadata using OpenSearch and vector embeddings, improving user query relevance by 55%.
- Developed scalable Flask-based microservices for managing AI agent workflows on AWS Lambda and ECS with event-driven architecture.
- Automated infrastructure provisioning using Terraform and GitOps practices, ensuring stable and repeatable deployments across QA and Prod.
- Collaborated in agile sprints (Scrum) across cross-functional teams to iterate on AI-enhanced ad delivery pipelines and campaign performance reporting.
- Led containerization of existing services, implementing Dockerized environments for rapid testing and deployment via GitLab CI/CD.
- Implemented monitoring and traceability for AI services using OpenTelemetry and centralized logs in Prometheus and Grafana.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built backend services using Java and Python for AI-powered tools assisting in content moderation and sentiment analysis.
- Developed ETL jobs to sync structured and unstructured datasets across PostgreSQL and MongoDB into unified dashboards.
- Collaborated on full-stack systems to manage customer engagement insights, integrating REST APIs, charts, and rule-based automations.
- Automated testing and validation for AI outputs, reducing model deployment errors by 65% in real-world usage.
- Engineered secure data export mechanisms for analytics in compliance with GDPR and regional privacy regulations.
- Worked on A/B experimentation framework integrations, enabling marketing teams to deploy AI-optimized variants at scale.
- Integrated third-party ML services through RESTful endpoints to extend NLP functionalities like named entity recognition.
- Contributed to codebase-wide refactors optimizing object-oriented design patterns and modularization for AI microservices.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Participated in prototyping AI assistant modules for internal automation tools using Python, LLM APIs, and clickstream data.
- Developed CLI utilities for text classification using Scikit-learn and customized embeddings for initial POC testing.
- Assisted in deploying internal ML workflows into production using AWS EC2 instances and shell automation scripts.
- Built simple admin dashboards in Flask to test and interact with AI response logs and usage metrics.
- Designed RESTful endpoints for text analytics workflows, integrating natural language preprocessing and scoring.
- Drafted documentation and usage guides for internal AI feature APIs consumed by product teams.
- Supported pipeline scheduling using cron jobs and shell scripts for periodic vector updates and model retraining cycles.
- Conducted code reviews and advised on unit testing practices for AI-specific service logic.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Contributed to initial development of AI-assisted helpdesk platform using Python, MySQL, and early chatbot frameworks.
- Implemented structured logging and basic NLP processing pipelines with NLTK for request classification and response ranking.
- Assisted in preparing and cleaning labeled datasets to train text classifiers for customer service queries.
- Worked closely with senior engineers to design backend interfaces for querying user intent and history logs.
- Developed internal scripts to parse support ticket logs and extract patterns using regex and SQL joins.
- Learned DevOps principles by helping deploy REST APIs to AWS and maintain version control using Git.
- Built simple UIs in HTML/JS to test chatbot responses and configure fallback logic.
- Participated in agile sprint cycles and QA testing of new AI-enabled support workflows.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Machine Learning – Specialty
- ❖ LangChain for Developers – DeepLearning.AI

- ❖ Python for AI and Data Science – IBM
 - ❖ Building LLM Applications with LangGraph – Hugging Face
 - ❖ Terraform and Infrastructure as Code – Udemy
 - ❖ Introduction to Retrieval-Augmented Generation – Cohere Academy
-

PROJECTS

- ✓ **LLM-Powered Campaign Assistant:** Designed an AI agent capable of generating and optimizing ad copy using LangChain + Bedrock; integrated with real-time performance feedback loop via OpenSearch.
- ✓ **Vector Search for Product Recommendations:** Developed RAG-based recommendation engine with ClickHouse + OpenSearch to power personalized product listings based on user embeddings.
- ✓ **AI Assistant for Marketing Reports:** Built GPT-based report summarization pipeline for large data dashboards using SageMaker, ECS, and Redis queues; reduced report preparation time by 70%.
- ✓ **Tool-Augmented Email Generator:** Created AI assistant that generates marketing emails with tool support for tone, style, CTA checking using LangGraph and multiple LLM backends.
