

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and solutions-driven Senior Backend Engineer with over 8 years of experience designing and building robust server-side systems, scalable APIs, and secure, high-performance backend platforms. Proven expertise in Ruby on Rails, PostgreSQL, Redis, Sidekiq, and AWS. Passionate about clean architecture, test-driven development, and continuous performance optimization. Adept at collaborating with cross-functional teams to transform business requirements into effective technical solutions that deliver value to users and stakeholders.

TECHNICAL SKILLS

- **Languages:** Ruby, JavaScript, TypeScript, Python, HTML5, CSS3
- **Frameworks:** Ruby on Rails, RSpec, Sidekiq, Express.js
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Tools & DevOps:** Git, Docker, Kubernetes, GitHub Actions, AWS (EC2, RDS, S3), GCP, Jira
- **Testing:** RSpec, Capybara, FactoryBot, Cypress
- **Architecture:** RESTful APIs, Microservices, Domain-Driven Design, Event-Driven Architecture
- **Other:** CI/CD, Agile/Scrum, BDD/TDD, Performance Tuning, Security Hardening

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Led the backend architecture design and development of a scalable CMS-like platform serving over 50,000 monthly users, using Ruby on Rails and PostgreSQL.
- Implemented advanced API endpoints following REST principles with detailed versioning, rate limiting, and documentation, resulting in a 40% improvement in client onboarding.
- Refactored legacy monolithic services into isolated microservices using Sidekiq and Redis for background jobs, significantly improving system throughput and reliability.
- Built automated test suites using RSpec and FactoryBot, achieving 95% code coverage and preventing major regressions during rapid development cycles.
- Tuned database queries and indexes on PostgreSQL to reduce page load times by over 60%, improving the user experience for both web and mobile clients.
- Integrated AWS-based infrastructure including EC2, RDS, and S3 with CI/CD pipelines to support high availability and rapid deployments across environments.
- Championed Agile development practices, leading sprint planning, code reviews, and mentoring junior developers in performance optimization and testing strategy.

- Resolved critical security issues through careful code audits, session handling improvements, and implementation of secure authentication workflows.

Syscom Digital **Software Engineer**

October 2019 – August 2021

Bucharest, Romania

- Built and maintained content management features for marketing platforms using Ruby on Rails, enabling dynamic content customization and campaign delivery.
- Designed RESTful services integrated with third-party CRM and analytics tools, improving data sync and reporting accuracy by over 75%.
- Developed background job processing for video rendering and email campaigns with Sidekiq and Redis, supporting over 100,000 monthly tasks.
- Created reusable components and internal APIs to accelerate future development across multiple product verticals, improving engineering velocity.
- Participated in security compliance reviews and implemented secure API access using OAuth 2.0 and JWT token handling mechanisms.
- Mentored two junior engineers by introducing them to BDD and Ruby on Rails best practices, contributing to team-wide skill growth.
- Enhanced deployment processes with GitHub Actions and Docker containers to support consistent builds and environment parity.
- Collaborated with designers and product managers to scope features and develop backend logic aligned with UX principles and performance goals.

Soft Build **Software Developer**

June 2016 – July 2019

Timișoara, Romania

- Built web-based admin panels and content delivery features for a logistics SaaS product using Ruby on Rails and Bootstrap.
- Implemented data aggregation and filtering queries using PostgreSQL and ActiveRecord scopes to support large datasets and analytics dashboards.
- Integrated APIs from shipping providers and payment gateways, maintaining high system uptime and fast response times.
- Automated test coverage expansion using RSpec, reducing production bugs and improving QA cycle times.
- Refined system architecture by modularizing controller logic and extracting reusable services, improving maintainability and reducing technical debt.
- Led migration efforts to AWS including environment configuration and serverless experimentation using Lambda for background triggers.
- Diagnosed and fixed slow-performing queries through EXPLAIN analysis and strategic indexing, doubling processing speed in reporting modules.
- Created technical documentation and onboarding guides for backend developers to ensure knowledge retention and transfer.

Decima Digital **Software Developer**

November 2015 – April 2016

Tallinn, Estonia

- Contributed to the backend development of a content publishing tool using Ruby on Rails and PostgreSQL.
- Developed localization-ready API endpoints to serve multilingual content and optimized them for SEO standards and international accessibility.
- Participated in database schema redesigns to support flexible content modeling and dynamic field creation.
- Integrated frontend CMS widgets with backend services using AJAX and JSON APIs for a seamless editing experience.
- Implemented caching strategies using Redis to improve server response times on high-traffic content pages.
- Resolved edge-case bugs through deep log analysis, replicating production scenarios in test environments.
- Wrote RSpec unit and integration tests to support content creation workflows and maintain system stability during updates.
- Supported DevOps in creating backup strategies and recovery scripts for PostgreSQL databases in staging and production.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in developing an internal admin panel using Ruby on Rails and MySQL, enabling easier customer management for support staff.
- Wrote scripts to migrate data between legacy systems and Rails apps, ensuring data integrity and consistency.
- Conducted performance profiling using New Relic and suggested query optimizations for high-latency endpoints.
- Wrote tests and documentation for user and permission management modules to streamline onboarding and reduce manual processes.
- Maintained Dockerized environments for development, enhancing team collaboration and reducing setup friction.
- Created automation scripts for data validation, improving accuracy in early-stage production environments.
- Participated in code reviews and paired programming sessions to contribute to team knowledge-sharing and cohesion.
- Actively tracked and resolved QA bugs, coordinating with frontend developers to align user workflows across systems.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Ruby on Rails 6 Professional Certification** – Ruby Association
- ❖ **AWS Certified Developer – Associate**

- ❖ **PostgreSQL for Developers** – DataCamp
 - ❖ **Agile Software Development with Atlassian Jira** – Coursera
-

PROJECTS

✓ **ContentHub – Scalable CMS Platform**

- Designed and implemented a custom CMS platform in Ruby on Rails enabling marketing teams to create, organize, and publish content at scale.
- Integrated support for dynamic blocks, localization, and scheduled publishing with PostgreSQL and Sidekiq job queues.
- Achieved 99.99% uptime across 12+ months and reduced content publishing latency by over 70% through background processing and Redis caching.
