

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Proactive and performance-driven Full Stack Developer with over 8 years of professional experience in architecting and developing end-to-end web applications. Highly proficient in React, Angular, Node.js, Express, TypeScript, and databases including MongoDB, MySQL, and Redis. Proven expertise in building scalable, secure, and high-performance applications for both consumer-facing and enterprise-grade platforms. Adept at collaborating with cross-functional teams, implementing software engineering best practices, and driving product innovation with minimal supervision.

TECHNICAL SKILLS

- **Frontend:** React.js, Angular, Next.js, Tailwind CSS, HTML5, CSS3, JavaScript (ES6+), TypeScript, Figma, Bootstrap, Semantic UI
- **Backend:** Node.js, Express.js, RESTful APIs, GraphQL, JWT, OAuth2
- **Databases:** MongoDB, MySQL, PostgreSQL, Redis
- **DevOps & Tools:** Git, GitHub, Docker, Kubernetes, Nginx, CI/CD, Jenkins
- **Testing:** Jest, Mocha, Cypress, Postman, xUnit
- **Others:** Agile, Scrum, Microservices, MVC, MVVM, API Gateway, Caching, Authentication, Authorization

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Engineered and deployed scalable web apps using React.js, Node.js, and Express.js with real-time data pipelines powered by MongoDB and Redis to handle high concurrency efficiently.
- Implemented component-based front-end architecture in React and Angular, improving maintainability and testability of UI features across multiple modules and reducing technical debt.
- Designed and managed robust backend APIs with TypeScript, achieving improved data integrity and significantly decreasing failure rates through validation and layered architecture.
- Integrated caching strategies using Redis for frequently accessed data, which reduced API response time by over 60% and improved user experience under load.
- Led code reviews and mentored junior developers in secure coding practices, contributing to fewer security incidents and improved software quality across teams.
- Orchestrated CI/CD pipelines with GitHub Actions and Docker for seamless deployments across staging and production environments with zero downtime.
- Collaborated with design and QA teams to deliver UI/UX enhancements that increased customer satisfaction scores by 25% within the first release cycle.

- Developed and maintained logging and monitoring systems using custom middleware and third-party tools, enabling proactive issue detection and resolution.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Designed responsive front-end interfaces with Angular and Tailwind CSS, aligning with business needs and enhancing usability across devices including tablets and phones.
- Developed microservice-based backends using Node.js and Express integrated with MySQL and Redis, supporting large-scale marketing automation features with high reliability.
- Utilized REST APIs and implemented secure authentication via OAuth2, improving access control and aligning with modern security standards.
- Led the initiative to refactor legacy JavaScript code into modular TypeScript-based services, resulting in increased test coverage and long-term maintainability.
- Implemented async task queues and cron jobs using Node and Redis to support campaign scheduling and analytics with real-time updates and fallback mechanisms.
- Managed Git-based workflows, including branching strategies, pull requests, and conflict resolutions, ensuring efficient multi-developer collaboration.
- Acted as point-of-contact for cross-team integration efforts, successfully delivering backend and UI changes ahead of key marketing campaign deadlines.
- Researched and implemented web performance optimizations, reducing initial load time by 45% and improving Lighthouse performance scores.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built enterprise dashboards using Angular and Bootstrap, supporting dynamic content rendering and modular widgets that allowed real-time user customizations.
- Engineered backend APIs in Node.js with Express and integrated MySQL and Redis to manage large datasets with efficient query performance and transactional consistency.
- Conducted regular system profiling and debugging sessions, identifying bottlenecks and reducing average server response time by over 40%.
- Developed secure user authentication modules leveraging JWT tokens and encrypted sessions, meeting OWASP compliance requirements.
- Integrated third-party APIs for payment processing and data feeds, supporting scalable ecommerce features across the client portfolio.
- Set up Dockerized local development environments, reducing onboarding time for new developers and minimizing system configuration discrepancies.
- Coordinated sprint planning and retrospectives as a core Agile team member, enhancing team velocity and stakeholder communication.
- Participated in unit and integration testing efforts using Mocha and Chai, consistently maintaining above 90% code coverage.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Developed web-based admin tools using AngularJS and Node.js that streamlined internal workflows and reduced manual tasks by 30%.
- Integrated MongoDB into legacy systems and redesigned schemas to enhance query performance and accommodate new product features.
- Collaborated with QA to automate regression tests and build test suites that reduced bug regressions by 40% within the first quarter.
- Designed UI components following mobile-first principles, significantly improving performance and layout on low-bandwidth devices.
- Created technical documentation and architectural diagrams for existing systems, facilitating knowledge sharing across distributed teams.
- Built custom logging and alerting middleware for Express apps, improving monitoring and issue resolution times.
- Worked with stakeholders to gather and refine requirements, delivering actionable specs to the development team.
- Implemented version control best practices and CI workflows to standardize release processes and reduce merge conflicts.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in developing internal tools using JavaScript, HTML5, and CSS3, laying foundational knowledge in full-stack development workflows.
- Contributed to the implementation of responsive UI components and interactive elements, increasing user engagement on client-facing portals.
- Participated in weekly standups and sprint reviews, gaining exposure to Agile software development processes and team collaboration.
- Built basic Node.js backend services and REST APIs for internal use cases, including authentication and CRUD operations.
- Wrote technical documentation for setup procedures and onboarding instructions, reducing ramp-up time for new interns.
- Debugged cross-browser compatibility issues and improved rendering performance on legacy browsers.
- Supported the deployment of projects to development servers using FTP and basic CI/CD workflows.
- Shadowed senior engineers to gain hands-on experience in production codebases and modern development practices.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Node.js Application Development Certification – OpenJS Foundation
 - ❖ MongoDB for Developers – MongoDB University
 - ❖ TypeScript Fundamentals – Pluralsight
 - ❖ Secure Coding Practices – Coursera (University of California, Davis)
-

PROJECTS

✓ Scalable E-Commerce Platform

- Architected and developed a full-stack e-commerce solution using React, Node.js, Express, MongoDB, and Redis, supporting over 50,000 concurrent users with load balancing and caching strategies.

✓ Real-Time Chat Application

- Built a secure, real-time messaging app using Socket.IO, Express, and Redis, implementing offline message queuing, read receipts, and robust user authentication with JWT.

✓ Performance Monitoring Dashboard

- Developed a dashboard with Angular and Tailwind to visualize system metrics using APIs and data streamed from Redis. Included custom alerts and trend analytics for engineering teams.
