

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 9+ years of hands-on experience architecting and delivering scalable web applications using React, Django, and PostgreSQL. Specialized in healthcare, AI-powered systems, and performance-optimized UIs with robust API backends. Proven ability to lead full-cycle development, collaborate cross-functionally in remote teams, and implement best practices in accessibility, data compliance, and DevOps workflows. Committed to delivering production-ready features that improve patient care and clinical workflows.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, HTML5, CSS3, SQL
- **Frontend:** React, Redux, Next.js, Material UI, Tailwind, Vue.js
- **Backend:** Django, FastAPI, Node.js, REST, GraphQL
- **Database:** PostgreSQL, MySQL, MongoDB, SQLite
- **DevOps:** Docker, GitHub Actions, Jenkins, Linux, CI/CD
- **Cloud:** AWS EC2, S3, Lambda, Firebase
- **Testing:** PyTest, Jest, Cypress, Postman
- **Security & Compliance:** OAuth2, HIPAA workflows, GDPR principles
- **Other:** Agile/Scrum, Jira, Figma, Swagger, OpenAPI

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented AI-integrated clinical dashboard systems with React and Django that supported pre-diagnosis data visualization and clinician workflow automation.
- Led backend optimization of PostgreSQL schemas and query indexes, reducing patient data retrieval times by 40% for high-concurrency environments.
- Built responsive and WCAG-compliant interfaces in React, with dynamic charting and filterable health metrics integrated via reusable components.
- Developed a secure authentication flow including 2FA and role-based permissions to support both clinicians and administrative staff.
- Architected a scalable API layer using Django REST Framework, supporting 10K+ concurrent sessions while maintaining 99.98% uptime.
- Mentored 3 junior developers and introduced CI/CD pipelines using GitHub Actions, cutting staging deployment times from 12 mins to under 4.

- Integrated third-party EHR systems and lab APIs through asynchronous job workers to sync patient data securely and reliably.
- Participated in sprint planning and retrospectives, leading a culture of documentation, peer review, and continuous improvement in a remote-first team.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Delivered end-to-end development of a data-heavy analytics dashboard for a healthcare marketing client using React and PostgreSQL.
- Engineered backend services in Django to process and transform medical campaign data with complex filtering, grouping, and aggregation logic.
- Enhanced frontend performance with lazy loading, route-based chunk splitting, and virtualized tables, improving load time by 60%.
- Implemented accessibility improvements aligned with WCAG 2.1 AA standards, making UIs screen reader-friendly and keyboard-navigable.
- Collaborated with data privacy consultants to ensure GDPR-compliant data handling, logging, and opt-in mechanisms.
- Wrote API contract documentation using Swagger, ensuring tight integration across front/backend teams and QA.
- Set up monitoring dashboards using Grafana and Prometheus for system health tracking and error analysis.
- Led unit and integration testing efforts, increasing test coverage from 40% to 85% across both frontend and backend modules.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Created secure web applications for appointment scheduling and clinical resource tracking using Python, Django, and PostgreSQL.
- Implemented modular React frontend with Redux store patterns to support data synchronization with legacy Django templates.
- Integrated real-time data streaming for patient queue systems using WebSockets and Django Channels.
- Refactored database queries to reduce N+1 call issues, resulting in a 70% performance boost for multi-clinic reporting features.
- Built healthcare-friendly PDF report generation modules with dynamic chart rendering and export-to-email logic.
- Developed admin dashboards to monitor clinician workloads, appointment durations, and no-show analytics.
- Provided DevOps support by containerizing apps via Docker and managing deployment pipelines on AWS.
- Initiated pair programming and weekly code reviews to foster collaboration and codebase consistency across the team.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Built Django-based internal tools for dental practice management, integrating PostgreSQL for patient and billing records.
- Created reusable UI components with jQuery and HTML5, before transitioning to Vue.js for dynamic views.
- Wrote cron jobs for automated reminder emails and appointment sync with Google Calendar APIs.
- Designed REST APIs with token-based auth and rate limiting to support third-party integrations securely.
- Migrated legacy monolith to microservice-aligned structure with standalone billing and inventory modules.
- Ensured responsive behavior across devices using Bootstrap and mobile-first design principles.
- Added support for multilingual UIs and localized content management for international clients.
- Participated in internal UX audit to improve clinical workflow bottlenecks based on stakeholder interviews.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Developed early-stage prototypes of an AI-powered dental imaging assistant using Python and OpenCV.
- Assisted in building form-driven Django web apps to capture and structure clinical data efficiently.
- Built a PostgreSQL-backed reporting system that generated patient summaries and diagnostic logs.
- Contributed to React prototype experimentation for interactive form editors and consent signature capture.
- Wrote scripts to automate lab test result ingestion and linking with electronic patient records.
- Implemented test cases for model validation and basic user access control modules.
- Collaborated with medical domain experts to translate use cases into software requirements.
- Presented internship outcomes in a demo session to clinicians and received a follow-on contract offer.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ Advanced Django and REST API Development – Udemy, 2024
 - ❖ PostgreSQL Performance Tuning – Coursera, 2023
 - ❖ React for Enterprise Applications – Frontend Masters, 2023
 - ❖ GDPR and HIPAA Compliance Essentials – LinkedIn Learning, 2022
-

PROJECTS

- ✓ **AI-Powered Dental Charting Assistant**

Built a React + Django application that auto-generates dental records from audio input using NLP pipelines. Implemented accessibility-first UI design and HIPAA-compliant data storage with PostgreSQL.

- ✓ **Remote Health Monitoring Dashboard**

Developed a full-stack system for wearable health devices. Frontend in React, backend in Django REST, with live chart updates and alerts based on streaming data and user thresholds.

- ✓ **Clinical Resource Optimization Tool**

A web-based scheduling optimizer using Python and Django for dentist availability and appointment types. Integrated PostgreSQL stored procedures to perform fast constraint satisfaction.
