PROFESSIONAL SUMMARY

Detail-oriented and innovative Front-End Developer with 8+ years of professional experience delivering scalable, high-performance web applications using React.js and modern JavaScript. Proficient in building enterprise-grade systems, collaborating in agile cross-functional teams, and owning full development lifecycles from feature ideation to CI/CD deployments. Passionate about clean architecture, accessibility-first design, performance tuning, and empowering product value through elegant UIs. Adept in integrating REST APIs securely, managing state using Redux and Zustand, and contributing to robust testing and deployment workflows. Seeking to leverage my expertise to make a meaningful impact in the healthcare tech industry.

TECHNICAL SKILLS

- **Frontend:** React.js, TypeScript, JavaScript (ES6+), Redux, Zustand, Recoil, HTML5, CSS3, SCSS, Material-UI, Ant Design, Bootstrap, Webpack, Babel
- **Testing:** Jest, React Testing Library, Cypress
- **Tooling:** Git, GitHub Actions, Bitbucket, Figma, ESLint, Prettier, Jira, Confluence
- **DevOps:** GitHub CI/CD, Docker, Azure DevOps, AWS S3 & EC2
- **Others:** REST APIs, Accessibility (WCAG), Cross-browser Compatibility, Responsive Design, Performance Optimization

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Spearheaded front-end architecture for large-scale enterprise platforms using React.js, applying component-driven development and enforcing strict type safety with TypeScript
- Developed responsive, accessible user interfaces across browser environments using React, SCSS modules, and Material UI, improving UI performance by over 30% through memoization and lazy loading
- Collaborated directly with product managers and backend teams to refine user flows, enhance usability, and integrate scalable API-driven data visualizations into real-time dashboards
- Led the migration of legacy codebases to modern React with Redux Toolkit, achieving 45% reduction in technical debt while maintaining full test coverage with Jest and React Testing Library

- Designed and maintained CI/CD pipelines using GitHub Actions, automating build, test, and deployment workflows to ensure stable, traceable releases across multiple staging environments
- Conducted weekly code reviews and peer mentoring sessions, improving team code quality and onboarding velocity through clean coding standards and documentation best practices
- Established a component library from scratch using Storybook to streamline consistency across modules and promote design system adoption among development teams
- Implemented authentication and authorization mechanisms with JWT and secure HTTP-only cookies, hardening frontend security posture in line with OWASP best practices

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built robust web applications for digital marketing platforms using React.js, ensuring modular code structure and reusable UI components to support long-term scalability
- Integrated complex user interaction logic using Redux and custom hooks to enhance user experience while maintaining strict separation of concerns and simplifying testing
- Streamlined build processes and bundling using Webpack and Babel, reducing bundle size by 40% and improving first contentful paint performance across mobile devices
- Contributed to transitioning CI/CD pipeline to GitHub Actions, automating deployments with zero-downtime strategies and improving incident response times by introducing rollback workflows
- Collaborated in Agile ceremonies including sprint planning and retrospectives to align business requirements with engineering effort, ensuring consistent velocity and goal tracking
- Wrote comprehensive unit and integration tests, increasing code coverage to 85%, and implemented E2E tests with Cypress to validate critical paths across major user journeys
- Maintained seamless communication with QA and UX teams to uphold accessibility compliance, ensuring WCAG 2.1 AA standards for all interactive components
- Participated in cross-team architecture guilds, contributing to decisions around microfrontend approaches and state sharing strategies

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed and deployed internal admin portals and client-facing web tools using React and REST APIs, handling form validations, filters, charts, and data tables
- Optimized rendering logic by minimizing re-renders through memoization and refactoring class components to functional components with hooks, improving responsiveness by 25%
- Managed state using Redux Saga for asynchronous flows, simplifying API interactions and error handling across multiple views
- Collaborated with backend developers to align data models, using Swagger for API documentation and integrating error boundaries to handle failed requests gracefully
- Refactored SCSS to CSS-in-JS for a modular and maintainable styling architecture, standardizing the visual identity across various products
- Implemented CI workflows in Bitbucket Pipelines, ensuring repeatable builds and test automation for each feature branch
- Led internal workshops on modern React patterns, mentoring junior developers and facilitating internal knowledge sharing
- Supported app internationalization (i18n) to allow multi-language deployment, increasing client reach to four additional European markets

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Built web-based CRM interfaces using React and jQuery, focusing on DOM manipulation, API integration, and asynchronous form processing
- Implemented modular front-end solutions while collaborating with backend teams to ensure consistent API contract compliance
- Applied secure authentication techniques using OAuth2 and hardened user input forms with both client-side and server-side validation
- Managed local and remote environments using Docker for uniform deployment and troubleshooting consistency
- Worked with designers to implement responsive layouts, ensuring consistent experience on both tablet and desktop form factors
- Set up Jest and Enzyme tests for core React components, introducing snapshot testing for regression detection
- Delivered POCs for feature proposals and conducted technical feasibility assessments for client-requested customizations
- Participated in the migration planning from legacy PHP/jQuery frontend to a full SPA architecture with React

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in developing single-page web applications using HTML, JavaScript, and early versions of React, focusing on clean component structuring and form logic
- Implemented cross-browser CSS fixes and tested compatibility for multiple browser versions and screen resolutions
- Wrote documentation for UI components and contributed to company's internal style guide used for all web products
- Gained exposure to Agile methodology through daily standups, sprint planning, and task estimation
- Helped the QA team identify and resolve frontend layout issues and logic bugs, improving overall stability of releases
- Worked closely with mentors to understand modern frontend tooling including Gulp and Webpack
- Contributed to accessibility improvements by adding ARIA labels and ensuring keyboard navigation compliance
- Conducted exploratory testing to identify usability issues in navigation and mobile responsiveness

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **React - The Complete Guide (incl Hooks, React Router, Redux)** – Udemy, 2023
 - ❖ **JavaScript Algorithms and Data Structures** – freeCodeCamp, 2022
 - ❖ **CI/CD with GitHub Actions** – Pluralsight, 2024
-

PROJECTS

- ✓ **Medical Imaging Dashboard (Sensidev)**
Developed a React-based dashboard for radiologists and clinicians to view, annotate, and filter imaging metadata. Focused on performance, API reliability, and intuitive UX.
- ✓ **CI/CD System Automation (Syscom Digital)**
Introduced GitHub Actions to replace legacy Jenkins pipelines. Setup test stages, deployment workflows, and auto-tagging, resulting in 2x faster releases and fewer production issues.
