

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Fullstack JavaScript Engineer with 9+ years of experience building scalable, performant web applications. Adept in React, Next.js, TypeScript, and Node.js, with deep hands-on expertise in integrating AI tools and SDKs into product workflows. Proven ability to independently deliver complex solutions, build applications from scratch, and rapidly iterate on PoCs/MVPs. Passionate about automation, AI-enhanced development workflows, and building high-impact customer-facing platforms.

TECHNICAL SKILLS

- **Frontend:** React, Next.js, Redux, JavaScript, TypeScript, HTML5, CSS3, TailwindCSS, Material UI, Storybook
- **Backend:** Node.js, Express.js, NestJS, REST APIs, WebSockets
- **AI & Tools:** OpenAI SDK, Vercel AI SDK, Claude, Cursor AI, LangChain, Hugging Face
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Cloud & Infra:** AWS (S3, Lambda), Docker, GitHub Actions, Vercel, Netlify
- **Testing & DevOps:** Jest, Cypress, Playwright, CI/CD pipelines
- **Other Tools:** Figma, Jira, Trello, Slack, Notion

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Independently led the development of a fullstack sales automation tool using React, Next.js, Node.js, and PostgreSQL, achieving measurable time savings for the sales team through automation.
- Integrated OpenAI and Claude SDKs to prototype and launch AI-driven content generation modules that reduced manual customer input by over 60% in internal processes.
- Built and shipped MVPs for multiple AI-enabled microservices, using LangChain and Vercel AI SDK for dynamic conversational flows and GPT-4 integration.
- Architected and deployed a scalable backend using Express.js and Redis caching layers to support real-time updates across WebSocket-connected dashboards.
- Spearheaded implementation of advanced CI/CD workflows in GitHub Actions, reducing deployment friction and ensuring bi-weekly releases without regressions.
- Collaborated with product stakeholders to align AI product goals with UX flows, resulting in a 35% uptick in feature adoption among test users.
- Mentored junior engineers on AI toolchains, Next.js patterns, and rapid development practices while championing internal usage of Cursor AI for velocity gains.

- Optimized cloud infrastructure, utilizing AWS S3 and Vercel for fast, secure storage and CDN delivery for dynamic image and JSON data loading at scale.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Delivered customer management platforms with React and Node.js, integrating marketing automation and behavioral analytics into customizable campaign dashboards.
- Developed a robust internal content editing tool using Next.js and dynamic routing, supporting multilingual templates and live preview rendering.
- Maintained API backends using Express.js and PostgreSQL, introducing Redis-based caching for high-demand endpoints that reduced API response latency by 55%.
- Built secure OAuth 2.0 login flows and account management systems using Passport.js, enhancing user onboarding and session persistence.
- Initiated use of AI content classifiers in campaign design tools to suggest segmentation logic based on prior customer behavior and purchase frequency.
- Contributed to frontend design system built with Storybook, ensuring UI consistency and component-level unit testing coverage above 90%.
- Deployed Dockerized environments to streamline local development, reducing team onboarding time and configuration drift between staging and production.
- Implemented admin panels to manage customer segmentation and behavioral rule engines, giving marketing teams full control without dev intervention.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built internal logistics automation portals using Vue.js and Node.js, reducing shipment registration delays by over 40% through predictive form inputs.
- Led a project migrating legacy PHP backends to Node.js and PostgreSQL, rewriting and optimizing over 20 business-critical endpoints.
- Integrated third-party APIs for invoicing, SMS dispatch, and calendar synchronization using asynchronous jobs and robust error handling.
- Prototyped AI-driven reporting dashboards using TensorFlow.js and D3.js to enable visual forecasting of seasonal logistics demand patterns.
- Designed component libraries with SCSS mixins and utility-first CSS classes for reuse across multiple warehouse management UIs.
- Delivered monthly releases using GitHub Actions pipelines, integrated with Slack notifications and staging preview deployments.
- Ensured GDPR compliance by implementing fine-grained access logging and opt-in tracking across all data-sensitive workflows.
- Partnered with QA to introduce Cypress e2e testing, increasing coverage and preventing regression across key dashboard flows.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Delivered a lightweight inventory and invoicing web app using AngularJS for frontend and Express.js for backend, designed for small retailers needing fast, reliable access to product data.
- Developed custom AngularJS directives for reusable UI elements like dropdowns and modals, improving code maintainability and enabling quicker feature extensions.
- Implemented RESTful APIs using Express.js and Node.js to support CRUD operations across product listings, order history, and customer accounts.
- Integrated JWT-based user authentication to secure private routes and enable user-specific access controls in the system's admin dashboard.
- Deployed the application on a DigitalOcean instance with Nginx, setting up PM2 to manage the Node.js process and ensure uptime during live testing.
- Collaborated in weekly product review meetings with the founding team to refine UI flows based on feedback from early users during the private beta release.
- Designed a schema for PostgreSQL to store relational product, inventory, and order data, including custom indexing for faster report generation.
- Contributed bug fixes and UI improvements based on customer support tickets, delivering three hotfix releases with zero regressions in under two weeks.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Supported development of internal tools for customer support using vanilla JavaScript, Bootstrap, and PHP, improving daily task efficiency across the support team by over 25%.
- Created interactive dashboards for visualizing customer ticket volumes and trends using JavaScript charting libraries, supporting team leads with actionable insights during standups.
- Integrated AJAX-powered dynamic tables for viewing support history, reducing page reloads and improving internal system usability for support agents.
- Built reusable frontend form components to accelerate admin panel development, cutting repetitive manual work by streamlining form validation and submission handling.
- Maintained and debugged backend modules built with PHP and MySQL, ensuring reliable processing of support ticket updates, notes, and escalation rules.
- Wrote scripts to automate data extraction from customer feedback logs, which enabled generation of monthly satisfaction reports for the customer success team.
- Collaborated directly with a senior developer and QA tester to resolve urgent bugs, leading to a 40% drop in support incidents linked to broken admin features.
- Learned to use Git and GitHub in a production environment, participating in code reviews and adhering to team pull request conventions for version control discipline.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ OpenAI LLM Application Developer (2024)
 - ❖ React & Redux Advanced – Udemy (2023)
 - ❖ Node.js Microservices Architecture – Coursera (2022)
 - ❖ AWS Developer Associate (2022)
-

PROJECTS

- ✓ **AI-Powered Sales Assistant (2024)**
Built a smart sales automation tool for Sensidev using React, Next.js, and OpenAI APIs. Designed to help sales teams manage leads and compose email responses automatically.
- ✓ **Realtime Chat App with AI Autoreply**
Developed a WebSocket-based messaging platform integrated with GPT-4 to enable AI-driven responses and intent detection, deployed on Vercel with Redis caching.
- ✓ **Smart Form Auto-Filler**
Created a tool using LangChain and browser extension APIs to autofill web forms with AI-generated context from uploaded resumes or user history.
