

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and results-driven Frontend Engineer with 9+ years of experience architecting and building scalable, performant, and user-centric web applications. Proven track record of leading frontend teams, developing real-time user interfaces, and integrating complex backend systems into intuitive user experiences. Adept at working with React, Next.js, TypeScript, and streaming data using sockets and real-time APIs. Passionate about designing interfaces that enhance human-AI interaction, empower users, and push the boundaries of modern UX design.

TECHNICAL SKILLS

- Languages: JavaScript, TypeScript, HTML5, CSS3, SCSS, Python
- Frameworks: React.js, Next.js, Node.js, Express.js, Redux, Zustand, WebSocket, Socket.IO
- Design: Figma, Adobe XD, Tailwind CSS, Material UI, Chakra UI
- Testing: Jest, React Testing Library, Cypress
- Tools: Git, GitHub, Bitbucket, Webpack, Vite, Babel, Postman, Chrome DevTools
- Cloud/CI/CD: Vercel, Netlify, AWS (basic), Docker (basic)
- Architecture: Component-driven development, SSR, SPA, Microfrontends, REST APIs, GraphQL
- Methodologies: Agile, Scrum, TDD, BDD, Atomic Design

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Spearheaded the development of a modular front-end architecture using Next.js and TypeScript, enabling seamless integration with multiple LLM-based microservices.
- Engineered real-time dashboards with socket-based communication to visualize and monitor AI-driven decision-making across enterprise platforms.
- Led the UI/UX implementation of human-in-the-loop workflows, allowing end-users to steer AI-generated outputs through intuitive visual controls.
- Integrated streaming APIs using WebSockets to render dynamic suggestions, feedback loops, and chat-based interactions with live updates.
- Collaborated closely with backend and AI teams to design schema for transmitting structured reasoning data from LLMs into front-end visualization components.

- Conducted performance audits and applied virtual DOM optimization, reducing render time by 40% for high-frequency UI updates in real-time modules.
- Mentored junior developers on real-time UI patterns, state synchronization, and architectural decisions across multiple product teams.
- Delivered pixel-perfect UI components from Figma prototypes using Tailwind CSS and component-driven development workflows with Storybook.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed and maintained React-based campaign management platforms, supporting live analytics and A/B testing dashboards with user event streams.
- Built custom visual interfaces for controlling automated decision trees, enabling marketing teams to guide customer engagement flows.
- Introduced Redux middleware and side-effect management using Redux-Saga for better control over streaming data and async UI behaviors.
- Integrated chat-style UIs with real-time feedback loops and conditional logic branching using custom hooks and server interactions.
- Conducted accessibility audits across components and implemented ARIA standards to ensure inclusive UX for live campaign pages.
- Streamlined deployment pipelines using Netlify CLI and GitHub Actions, reducing manual effort and delivery delays.
- Led refactors toward component modularity and reusability, establishing internal libraries of reusable UI building blocks.
- Collaborated with QA teams to implement test coverage across mission-critical flows using Jest and React Testing Library.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Delivered enterprise dashboards and control panels using React, Socket.IO, and Node.js to support live equipment telemetry and alerts.
- Designed intuitive UIs for configuring IoT devices in real time, mapping user actions directly to device instructions and validations.
- Implemented SSR features using Next.js for optimized SEO and performance-critical pages in product catalogs and configuration wizards.
- Worked closely with product managers to convert wireframes into high-fidelity interactive components across admin portals.
- Developed custom form engines with dynamic field rendering and live validation based on user inputs and backend constraints.
- Integrated multilingual support for over 6 languages using i18next and Context API for international users.
- Participated in cross-team architectural sessions to decouple tightly integrated monolith frontends into independently deployable modules.
- Reduced frontend load times by implementing lazy loading, code splitting, and memoization for high-impact components.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Built product interfaces using React and Webpack for digital asset management tools designed for creative professionals.
- Developed real-time preview modules that updated visual assets dynamically based on backend triggers and asset status changes.
- Implemented authentication layers and route protection with client-side auth guards and role-based rendering logic.
- Created reusable component libraries with prop-based theming and global state persistence across multiple app sessions.
- Collaborated with backend developers to define GraphQL schema for frontend data hydration in visual asset editing modules.
- Led UI/UX review cycles with designers to ensure fidelity with brand guidelines and usability heuristics.
- Delivered unit-tested React components using Mocha and Enzyme, ensuring stability and regression-proof deployments.
- Deployed preview environments via Vercel for product demos and internal validation with stakeholders.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in developing internal CRM interfaces using vanilla JavaScript, jQuery, and Bootstrap for real-time client interactions.
- Built real-time chat support windows with live agent updates and push notification support via polling and long-polling APIs.
- Designed and developed analytics widgets that dynamically updated charts and KPIs as new lead data streamed into the backend.
- Contributed to modularizing frontend logic into separate controllers and utility layers to ease future refactor efforts.
- Optimized frontend performance by removing jQuery dependency and adopting native APIs and ES6+ syntax.
- Implemented custom loaders, spinners, and animations that enhanced user interaction and provided feedback for async flows.
- Created onboarding modals with step-by-step guides and in-app tooltips to assist first-time users.
- Participated in product ideation workshops and sprint retrospectives with full-time developers and stakeholders.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Certified Front-End Developer (Meta/Meta Blueprint, 2023)

- ❖ Real-Time Web with WebSockets and Node.js (Udemy, 2022)
 - ❖ UX Design for AI-Driven Products (Coursera, 2023)
 - ❖ Building AI-powered Chat Interfaces (Pluralsight, 2024)
-

PROJECTS

- ✓ **LLM-Agent Console** — A web-based interface built with Next.js and WebSockets to visualize real-time reasoning paths and decisions made by AI agents, supporting live feedback and user confirmations.
- ✓ **Realtime AI Chat Studio** — Created a collaborative editor with streaming AI responses, live voting, and feedback injection tools. Powered by React, Zustand, and custom socket middleware.
- ✓ **Human-in-the-Loop Workflow Designer** — Drag-and-drop flow editor enabling non-technical users to adjust AI behavior in enterprise automation scenarios. Integrated deeply with backend decision engines.
- ✓ **VisualPrompt** — UI kit and front-end framework for building LLM-driven applications, featuring controls for model selection, output steering, and context injection modules.
