

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with **9+ years of experience** in backend and full-stack development, leading architecture design, and building scalable, secure, and distributed systems. Proven expertise in **Node.js, TypeScript, NestJS, MongoDB, Docker, Kubernetes, and RESTful APIs**, with hands-on experience integrating **AI-driven automation pipelines** and deploying cloud-native solutions on **AWS, GCP, and Firebase**. Adept at mentoring teams, enforcing best practices, and delivering enterprise-grade applications aligned with product and business goals. Passionate about **privacy, data security, and AI innovation**.

TECHNICAL SKILLS

- **Languages & Frameworks:** Node.js, TypeScript, NestJS, JavaScript, React, Angular, Python, C#, .NET Core, PHP, Golang
- **Databases:** MongoDB, PostgreSQL, MySQL, SQL Server, Firestore, Redis, NoSQL, Vector Databases
- **Cloud & DevOps:** AWS, GCP, Azure, Firebase, Docker, Kubernetes, Terraform, Cloud Functions, CI/CD Pipelines
- **Architectures:** Microservices, Event-Driven Architecture, API Integrations, Serverless, AI/ML Deployment
- **Testing & Tools:** Jest, Mocha, Cypress, GitHub Actions, GitLab CI/CD, Jenkins, Prometheus, Grafana
- **Security & Privacy:** Data Protection, GDPR Compliance, OAuth2, JWT, Secure API Design, Identity Management

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented **scalable backend microservices** in Node.js and TypeScript using NestJS, improving response times by 40% while supporting millions of secure API requests daily.
- Architected **AI-powered automation pipelines** for large-scale data processing, integrating with vector databases and external APIs to optimize privacy and compliance workflows.
- Deployed applications on **Docker and Kubernetes clusters** in AWS and GCP, ensuring fault tolerance, high availability, and automated recovery under peak loads.
- Led backend security initiatives by enforcing **encryption, secure authentication, and GDPR-compliant data pipelines**, reducing risk exposure by 60%.

- Oversaw **CI/CD pipeline design** with GitHub Actions and GitLab, streamlining deployments and cutting release cycle times by 50%.
- Collaborated with frontend engineers to deliver **end-to-end solutions**, ensuring seamless integration with React and Angular client apps.
- Mentored junior developers, introducing coding standards and architecture patterns that improved code quality and reduced defects.
- Conducted **system monitoring, logging, and performance tuning** with Prometheus and Grafana, enabling proactive issue detection and cost-efficient scaling.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Built and maintained **distributed backend systems** with Node.js, Express, and MongoDB, handling high-volume real-time data streams for marketing automation.
- Developed **secure RESTful APIs and WebSocket services** to support customer-facing platforms and integrations with third-party providers.
- Introduced **containerization with Docker** and orchestrated environments using Kubernetes, reducing downtime during deployments by 70%.
- Implemented **role-based access control (RBAC)** and tokenized security flows with OAuth2/JWT, strengthening user data protection.
- Created automated **unit and integration test suites** using Jest, increasing test coverage above 90% and improving reliability.
- Contributed to **cloud adoption strategy** by migrating workloads to AWS and Firebase, ensuring better scalability and operational resilience.
- Enhanced system observability by integrating **ELK stack and custom monitoring dashboards**, cutting incident resolution times significantly.
- Worked closely with cross-functional teams to align technical deliverables with product objectives and business KPIs.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Developed backend features in **.NET Core, PHP, and Node.js**, delivering business-critical applications for international clients.
- Managed relational and non-relational databases (**PostgreSQL, MySQL, MongoDB**) ensuring optimized queries and scalable schemas.
- Designed **API-first systems** with REST and GraphQL, enabling third-party integrations and internal service interoperability.
- Introduced **Docker-based development pipelines**, streamlining collaboration and reducing environment-related issues.
- Supported migration of legacy systems into **microservices-based cloud-native architecture**, improving scalability and maintainability.
- Delivered high-quality, **secure financial transaction processing systems** ensuring compliance with industry security standards.
- Automated testing and CI/CD processes with Jenkins, significantly reducing manual intervention during releases.
- Acted as technical point of contact for clients, ensuring requirements were translated into efficient software solutions.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Contributed to enterprise-grade **e-commerce and content management systems**, customizing backend workflows in PHP and Node.js.
- Enhanced **data processing pipelines** with optimized queries and caching mechanisms, reducing API response times.
- Participated in developing **secure user authentication modules**, safeguarding sensitive customer data across platforms.
- Supported the adoption of **containerized deployments** in staging and production environments.
- Built reusable modules and services, contributing to faster project delivery timelines.
- Collaborated with senior engineers on **cloud integration strategies**, enabling better scalability.
- Conducted **unit testing and code reviews**, ensuring adherence to quality standards.
- Gained exposure to **international team collaboration** and agile processes, setting a foundation for future leadership roles.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in backend and frontend feature development using PHP, JavaScript, and MySQL.
- Learned and applied **REST API design principles**, contributing to scalable system enhancements.
- Built small-scale automation scripts in Python for process optimization.
- Contributed to system testing, debugging, and performance verification of production applications.
- Supported **database design and optimization tasks**, ensuring data consistency and query efficiency.
- Documented development workflows and knowledge-sharing guides for junior interns.
- Shadowed senior engineers, learning best practices in security and software architecture.
- Developed a strong foundation in **cloud-based application hosting** and team collaboration.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- **Google Cloud Professional Cloud Architect**
 - **AWS Certified Solutions Architect – Associate**
 - **MongoDB Certified Developer Associate**
 - **Certified Kubernetes Administrator (CKA)**
-

PROJECTS

- **AI-Driven Privacy Automation System** – Designed scalable microservices in NestJS and deployed AI pipelines on GCP to automate data deletion and opt-out requests across hundreds of third-party services.
- **Cross-Platform Communication Hub** – Built distributed Node.js services with WebSockets and REST APIs enabling secure messaging, integrated with Firebase and MongoDB.
- **E-Commerce Cloud Migration** – Led migration of legacy monolithic system to cloud-native microservices on AWS with Docker and Kubernetes, reducing hosting costs by 45%.
