

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Product-driven Senior Full Stack Engineer with 9+ years of experience delivering scalable, performant, and secure web applications across diverse stacks. Deep expertise in **React**, **TypeScript**, **Next.js**, and backend services in **FastAPI**, **Node.js**, and **Golang**. Proven track record designing and deploying cloud-native APIs, event-driven systems, and high-throughput data pipelines. Skilled in CI/CD automation, testing, DevOps, and mentoring teams to ship quality code at scale.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Go, Python, SQL, HTML, CSS
- **Frontend:** React, Redux, Next.js, Tailwind CSS, TypeScript, jQuery, Storybook
- **Backend:** FastAPI, Node.js, Express.js, Go (Golang), Flask, REST APIs, OAuth2, JWT
- **Cloud & DevOps:** AWS (Lambda, DynamoDB, ElasticCache), Docker, Kubernetes, GitHub Actions, Linux, Vercel, DigitalOcean
- **Databases:** PostgreSQL, MongoDB, MySQL, Redis, DynamoDB
- **Testing & CI/CD:** Jest, Pytest, React Testing Library, GitHub Actions, CI/CD Pipelines
- **Monitoring & Logging:** New Relic, Splunk, Custom Metrics, Alerts, Dashboards
- **Tools:** JIRA, Confluence, Figma, Zeplin, Postman, Git

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Led full-stack delivery of ERP-integrated React UIs and FastAPI backends, deploying secure and reusable APIs to sync inventory, HR, and CRM data across PostgreSQL and Odoo modules.
- Developed RESTful services with token lifecycle control via OAuth2/JWT, enabling secure multi-role access and stateless session management for internal tools and partner applications.
- Designed and implemented Elasticsearch-powered reporting interfaces that reduced data retrieval latency by over 60% for large enterprise datasets.
- Automated deployments via Docker and GitHub Actions, ensuring high test coverage, rollout visibility, and rollback support for over 20 internal microservices.
- Engineered CI/CD pipelines and Kubernetes-compatible containers to support horizontal scalability, fault tolerance, and auto-healing across staging and production clusters.
- Mentored junior engineers on splitting feature delivery into composable, testable modules using SOLID principles and documented code reviews.

Syscom Digital
Software Engineer
October 2019 – August 2021
Bucharest, Romania

- Architected API services using FastAPI and Python to normalize and ingest high-volume campaign metrics from third-party CRM platforms into PostgreSQL and MongoDB backends.
- Created modular Odoo components enabling segmentation, workflow management, and automated email triggers synced across CRM tools and internal analytics platforms.
- Improved performance and observability of routing gateways with Redis caching and built-in metrics dashboards for proactive SLA alerting and debug tracing.
- Implemented CI pipelines with containerized test runners, ensuring staging parity and stability for a multi-developer module workflow integrated into GitHub repositories.
- Streamlined frontend features using custom React forms and REST APIs connected via secure OAuth tokens to reduce latency in real-time campaign dashboards.
- Led multi-day troubleshooting sessions resolving cross-system bugs through log analysis in Splunk, JSON payload inspection, and rollback testing environments.

Soft Build
Software Developer
June 2016 – July 2019
Timișoara, Romania

- Spearheaded development of HR automation tools with full-stack Python + PostgreSQL logic, replacing Excel workflows and integrating Odoo modules for payroll, vacation, and onboarding.
- Refactored monolithic backend scripts to leverage modularized ORM and dependency injection, reducing runtime errors by 45% and improving code reuse across HR systems.
- Coordinated with UI/UX teams to build reusable React components for financial dashboards, using Storybook to maintain a shared design system and visual regression tests.
- Introduced Docker Compose stacks for staging and local dev environments, allowing seamless collaboration and standardizing team testing processes.
- Implemented and maintained GitOps-style CI/CD pipelines for rapid feature validation and regression testing before scheduled deployments.
- Created observability tooling via Prometheus metrics, custom Grafana dashboards, and API health checks, improving MTTR across critical services.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Developed internal data pipeline scripts using Python to extract, transform, and load multi-source analytics into PostgreSQL, supporting BI dashboards and campaign analytics.
- Supported cross-version Odoo migrations by implementing diff validators, resolving schema inconsistencies, and aligning ORM logic with modern practices.
- Wrote JavaScript patches to modernize frontend interfaces bound to legacy QWeb templates, improving interactivity and client usability.
- Built retry-capable job runners and crons for syncing invoice and transaction data from external financial APIs into ERP modules.
- Participated in sprint planning and refactoring efforts to deprecate obsolete backends and replace them with lightweight microservices.
- Standardized GitLab CI pipelines to deploy static sites and containerized preview environments for testing external plugin compatibility.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Developed modular backend utilities in Python to preprocess ERP migration data, applying type safety checks and field validation for reliable one-time imports.
- Prototyped microservices using FastAPI to expose financial account data over token-secured endpoints with OpenAPI documentation.
- Created XML and JS-based user interfaces for internal dashboards, supporting early-stage ERP tooling and user administration screens.
- Built schema seeding tools and dummy datasets to accelerate development and QA validation for new ERP workflows.
- Contributed to internal knowledge base on API contracts and schema diagrams, improving onboarding time for new backend developers.
- Shadowed senior engineers and gained hands-on exposure to agile ceremonies, CI/CD pipelines, and distributed systems design.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **AWS Certified Developer – Associate** – Amazon Web Services
Demonstrates proficiency in deploying and debugging cloud-native applications, serverless APIs, and event-driven architectures on AWS.
- ❖ **Docker and Kubernetes: The Complete Guide** – Udemy
Comprehensive hands-on course covering Docker images, orchestration, Helm charts, and deploying production-ready applications on Kubernetes clusters.
- ❖ **Advanced React and TypeScript** – Frontend Masters
Deep dive into modern React patterns, hooks, Redux integration, and component-driven architecture using TypeScript.
- ❖ **Secure Coding Practices** – Coursera
Focused on writing secure, resilient code across web APIs and frontend applications, covering OWASP top 10 and secure DevOps pipelines.
- ❖ **CI/CD Pipelines with GitHub Actions** – Pluralsight
Practical training on creating automated build, test, and deploy pipelines using GitHub Actions for Node.js, Python, and container-based applications.

PROJECTS

- ✓ **KubeDash Metrics Monitor:**
Built a Golang-based backend with Prometheus exporters and React frontend dashboard to visualize pod metrics, API latency, and health status across Kubernetes clusters in real time.

- ✓ **Multi-Tenant Campaign API Platform:**
Developed a multi-tenant REST API in FastAPI + PostgreSQL with JWT/OAuth2 authentication and tenant isolation; frontend built in React + Tailwind for marketing analytics.
- ✓ **React Component Library with Storybook:**
Created a reusable UI component library in React and TypeScript, fully documented with Storybook and integrated into CI/CD pipelines for snapshot testing and automated publishing.
- ✓ **Lambda Finance Automation Engine:**
Designed AWS Lambda workflows (Python) for automating invoice validation and syncing financial records to DynamoDB and S3; triggered by SQS and CloudWatch Events.
- ✓ **On-Demand Report Generator (PDF/CSV):**
Microservice using Go and Pandas for dynamically generating and serving audit and financial reports; integrated into Slack bot with signed URL access and request queuing.
