

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned JavaScript engineer with over 8 years of professional experience in full-stack development, specializing in React, Node.js, TypeScript, and scalable cloud-based architectures. Demonstrated ability to design secure distributed systems, develop high-traffic applications, and lead engineering teams through best practices and mentorship. Proven success in delivering FinTech and enterprise-grade solutions, integrating DevOps pipelines, and deploying microservices on AWS.

TECHNICAL SKILLS

- **Languages & Frameworks:** JavaScript, TypeScript, Node.js, React, Redux, Express.js, HTML5, CSS3, SASS
- **Architectures:** Microservices, REST, GraphQL, Serverless
- **Tools & Platforms:** AWS (EC2, S3, Lambda, CloudWatch), Docker, Git, GitHub Actions, Webpack, Babel
- **Testing & QA:** Jest, Mocha, Cypress, Postman, Swagger, ESLint
- **Databases:** MongoDB, PostgreSQL, MySQL, Redis
- **DevOps:** CI/CD, Docker, GitHub Actions, AWS CloudFormation
- **Practices:** Agile, Scrum, TDD, Clean Architecture, SOLID Principles

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Engineered high-performance full-stack solutions using Node.js and React to handle over 1M monthly users with strict uptime and latency requirements.
- Designed and implemented scalable REST APIs and microservices with Express and TypeScript, ensuring high availability and security standards.
- Migrated legacy systems into modern TypeScript-based monorepos, reducing code complexity by 40% and boosting maintainability.
- Integrated AWS services such as EC2, S3, and Lambda to build serverless modules that reduced operational overhead and improved system elasticity.
- Collaborated with cross-functional teams to deliver features including virtual card generation, secure payment routing, and fraud detection logic.
- Led code reviews, mentored junior engineers, and established engineering guidelines that ensured consistent code quality and onboarding efficiency.
- Coordinated end-to-end testing and CI/CD pipelines with GitHub Actions, enhancing deployment velocity while maintaining release integrity.

- Worked with product owners to translate financial specs into robust, scalable technical designs supporting high-volume transaction processing.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Built FinTech frontends using React and Redux for dynamic client dashboards handling real-time transaction data feeds.
- Developed and maintained Node.js backend services processing millions of secure API calls daily for banking and marketing solutions.
- Applied Clean Architecture principles to decouple business logic and ensure scalable and testable code structure.
- Implemented GraphQL endpoints to optimize data retrieval and minimize client-server payloads, enhancing performance by 35%.
- Spearheaded the transition from JavaScript to TypeScript across services, reducing runtime bugs and improving developer productivity.
- Contributed to data visualization tools using D3.js and charting libraries, enriching user insights for financial decision-making.
- Set up Docker-based development environments and implemented pre-deployment tests using Mocha and Cypress.
- Participated in Agile sprint planning and retrospectives, advocating for clear sprint goals and technical estimations.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built secure, user-friendly applications using Node.js and React for real estate and e-commerce clients.
- Designed distributed systems and integrated payment processing solutions with Stripe and PayPal APIs.
- Collaborated on microservice-based architecture, orchestrating APIs with Redis for caching and PostgreSQL for relational data.
- Maintained Git versioning workflows and CI/CD pipelines to streamline team deployments and code integration.
- Engineered client-specific CMS and analytics dashboards with interactive charting and role-based access controls.
- Applied advanced testing strategies using Jest and Selenium to prevent regression in critical production workflows.
- Delivered performance optimizations via lazy loading and code splitting, improving first load times significantly.
- Partnered with UX/UI designers to implement pixel-perfect layouts responsive across devices and browsers.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Supported the build of Node.js-based backend systems handling authentication and user activity tracking.
- Developed reusable React components and integrated backend logic into interactive dashboards for admin control panels.
- Performed SQL and NoSQL database tuning for improved response times under traffic surges.
- Contributed to functional requirements documentation and collaborated with QA to validate workflows and edge cases.
- Implemented unit testing coverage standards and enforced them across teams using ESLint and Mocha.
- Integrated real-time push notifications using WebSockets for interactive financial alerts and user engagement.
- Optimized web services with caching layers and lazy loading to improve system throughput.
- Engaged in regular code reviews and pull request approvals to align with company coding standards.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Developed internal tools and CRUD applications using JavaScript, Bootstrap, and jQuery, later transitioning to React.
- Contributed to Node.js backend routes and implemented RESTful APIs for data collection and client-side rendering.
- Participated in API documentation and debugging efforts to improve developer onboarding.
- Assisted with UI/UX wireframes using Figma and translated them into mobile-responsive interfaces.
- Built modules for dynamic forms, multi-step wizards, and client validation workflows.
- Implemented simple monitoring scripts using AWS CloudWatch and basic Lambda triggers for backup alerts.
- Attended cross-team tech talks and knowledge-sharing sessions on secure coding and performance.
- Documented workflows and created internal wikis for junior developers and QA collaboration.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
- ❖ JavaScript Algorithms and Data Structures – freeCodeCamp
- ❖ Fullstack Open Certificate – University of Helsinki
- ❖ Node.js: Microservices, Testing, & Security – Udemy
- ❖ Advanced TypeScript Patterns – Pluralsight

PROJECTS

✓ **FinPay Microservice Banking Suite**

- Led development of a secure microservice banking suite using Node.js and React for customer accounts, card transactions, and AML workflows.
- Integrated AWS Lambda, API Gateway, and DynamoDB to build serverless modules handling asynchronous tasks with near-zero downtime.

✓ **Secure Virtual Cards Platform**

- Architected and implemented a feature-rich virtual card management platform handling generation, usage, and expiration of cards in real time.
- Designed secure APIs with JWT, role-based access, and encryption-at-rest practices integrated into AWS and PostgreSQL stack.

✓ **GraphQL Portfolio Insight Dashboard**

- Built a real-time GraphQL dashboard for financial advisors to track client portfolios and market events in one interface.
- Used Apollo Client and Server, WebSockets, and React to deliver seamless data updates and reduce server round-trips.
