

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Full Stack Engineer with 8+ years of professional experience designing, building, and maintaining scalable web applications using modern frontend and backend technologies. Proven expertise in React, Angular, and Vue for frontend, with Python, Java, and Node.js for backend services. Strong track record of delivering robust microservices, implementing CI/CD pipelines, and optimizing applications for performance and scalability. Adept at collaborating in distributed teams and contributing to architectural decisions that shape product direction.

TECHNICAL SKILLS

- **Frontend:** React, Angular, Vue.js, TypeScript, JavaScript (ES6+), Next.js, Nuxt.js
- **Backend:** Node.js, Express.js, Python (Django, Flask), Java (Spring Boot)
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **APIs:** RESTful APIs, GraphQL, third-party API integrations
- **DevOps & Cloud:** AWS, GCP, Azure, Docker, Kubernetes, CI/CD pipelines, GitHub Actions
- **Testing:** Jest, Mocha, Cypress, Jasmine, Selenium
- **Other:** Microservices architecture, Serverless (AWS Lambda), Agile/Scrum

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and developed full-stack applications using React, Node.js, and PostgreSQL, ensuring scalability, maintainability, and optimized system performance.
- Built and maintained RESTful APIs and GraphQL endpoints that improved data accessibility across multiple services and reduced client-side load times.
- Optimized application performance by refactoring code, reducing bundle size, and implementing advanced caching mechanisms that enhanced speed by 40%.
- Collaborated closely with product managers, UI/UX designers, and cross-functional teams to deliver customer-focused features within Agile development cycles.
- Implemented CI/CD pipelines using GitHub Actions and Docker, automating deployments and reducing release times by 60%.
- Integrated third-party services including payment gateways, authentication providers, and analytics tools, improving user experience and feature richness.
- Mentored junior developers through code reviews, pair programming, and technical workshops, fostering knowledge sharing and team growth.

- Actively participated in architectural discussions, introducing microservices and serverless approaches that improved product scalability and fault tolerance.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed and maintained scalable applications using Angular 10, TypeScript, and Node.js, ensuring compatibility across platforms and high performance.
- Implemented microservices architecture, breaking monolithic applications into modular services, improving maintainability and system resilience.
- Designed and optimized PostgreSQL and MongoDB schemas, improving query efficiency and supporting high-load transactional applications.
- Built interactive dashboards with real-time data visualization, enabling clients to monitor performance and make data-driven decisions faster.
- Enhanced CI/CD pipelines with Docker and Kubernetes deployments, reducing manual effort and improving release reliability.
- Conducted automated testing using Jest, Mocha, and Cypress, reducing production bugs and improving test coverage by 30%.
- Worked with cloud services (AWS, Azure) for deployment, storage, and serverless functions, improving scalability and reducing operational costs.
- Coordinated with distributed teams across different time zones, ensuring timely delivery of product milestones in Agile sprints.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built and maintained enterprise web applications with React, Redux, and Express.js, ensuring responsive design and high performance.
- Designed RESTful APIs and integrated with third-party services such as CRM and ERP systems, automating workflows and improving efficiency.
- Optimized SQL queries and database indexes, significantly reducing query execution times and improving scalability for high-load applications.
- Implemented CI/CD processes, containerization with Docker, and automated deployments to streamline the software delivery pipeline.
- Wrote end-to-end tests using Cypress and Jest, ensuring reliability and reducing post-release issues across different environments.
- Collaborated with product managers and clients to gather requirements, translate business needs into technical specifications, and deliver features.
- Migrated legacy systems into modern web applications, reducing maintenance costs and improving system reliability.
- Provided technical documentation and conducted knowledge-sharing sessions for team members, improving onboarding efficiency.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Developed custom eCommerce solutions using Angular and Node.js, integrating payment systems, user authentication, and cart management features.

- Collaborated with design and QA teams to build responsive user interfaces, ensuring mobile-first performance and accessibility compliance.
- Optimized application load times by implementing code-splitting, caching strategies, and CDN integrations for static assets.
- Designed and managed MongoDB schemas, ensuring scalability and data consistency across large customer datasets.
- Integrated third-party APIs for shipping, invoicing, and real-time order tracking, improving customer satisfaction and reducing support tickets.
- Implemented testing frameworks with Mocha and Jasmine, improving code quality and reducing regression issues.
- Participated in daily standups and sprint planning meetings, contributing to Agile workflows and continuous product improvement.
- Delivered features on tight deadlines while maintaining clean code practices, ensuring reliability and maintainability.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in developing full-stack web applications using PHP, JavaScript, and MySQL, supporting small-scale business automation systems.
- Wrote reusable and modular code under supervision, improving application maintainability and learning best practices in software engineering.
- Participated in database design and query optimization, ensuring efficient data retrieval and reduced page load times.
- Collaborated with senior engineers on bug fixes, code reviews, and testing, gaining practical experience in Agile development.
- Gained experience integrating APIs, authentication systems, and third-party tools for business applications.
- Learned best practices for frontend design, ensuring cross-browser compatibility and responsive layouts.
- Wrote unit tests with PHPUnit, improving software quality and reducing errors during deployment.
- Delivered small feature modules independently, building confidence and technical expertise in a production environment.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
 - Microsoft Certified: Azure Developer Associate
 - Google Cloud Professional Cloud Developer
-

PROJECTS

- **Hotel Mansion Booking Platform** – Developed with Vue.js & Nuxt.js, integrated with Apache HTTP server for seamless performance and SEO optimization.
- **Dende Restaurant System** – Built with Angular 10, implementing dynamic menu updates, online booking, and customer analytics.
- **BMW eCommerce Shop** – Created with Angular, TypeScript, Node.js, and Express.js, supporting high-volume traffic with optimized performance.
- **Finnair Shopping Portal** – Designed eCommerce features with React and integrated secure payment gateways for international transactions.
