PROFESSIONAL SUMMARY

Experienced and user-centric Fullstack Developer with 9+ years of proven expertise in building developer tooling, scalable APIs, and web applications with seamless user behavior instrumentation. Passionate about enhancing internal developer experience and driving data-driven decisions through robust analytics pipelines in cloud-native environments.

TECHNICAL SKILLS

- **Frontend:** React, JavaScript, TypeScript, HTML5, CSS3, Redux, SASS, Webpack
- **Backend:** Node.js, Java (Spring Boot), Express.js, REST APIs, gRPC
- **Testing & DevOps:** Jest, Cypress, Docker, Kubernetes, CI/CD
- **Database:** PostgreSQL, MySQL, MongoDB, IndexedDB, Redis
- **Cloud & Infrastructure:** AWS (Lambda, S3, EC2), GCP (Cloud Functions, Pub/Sub), Firebase, Kubernetes
- **Data & Streaming:** Protobuf, Kafka, GRPC, BigQuery, Dataflow
- **Tools:** Git, Jira, Confluence, Figma, Postman, Swagger

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led development of scalable React-based internal dashboards enabling 30+ devs to instrument user behavior data in real-time with customizable event schemas and analytics widgets.
- Developed microservices in Node.js and Java Spring Boot to collect, process, and distribute behavioral telemetry to Kafka and GCP Dataflow pipelines, increasing data throughput by 60%.
- Collaborated with frontend teams to ensure seamless SDK integration into desktop and TV web apps, decreasing integration bugs by 75%.
- Implemented a universal JavaScript SDK that abstracted instrumentation APIs, making it framework-agnostic and reducing onboarding time by 40%.
- Worked with data scientists and product managers to expose robust APIs that enabled real-time A/B testing and feature rollout tracking.
- Led GCP migration of several backend services including setting up GKE, Cloud Logging, and CI pipelines via Cloud Build for better scalability and observability.

- Created developer-friendly REST and gRPC endpoints with full Swagger documentation and contract testing using Pact, reducing integration regressions.
- Introduced error monitoring and performance profiling tools for internal applications using Firebase and custom metrics pipelines.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Designed frontend modules in React and TypeScript for marketing campaign tools, integrating with behavioral analytics and A/B testing libraries.
- Developed data ingestion APIs using Node.js to track event metrics and sync them with MongoDB and BigQuery datasets for visualization and insight mining.
- Enhanced developer onboarding by automating SDK configuration and deployment scripts using GCP Functions and Pub/Sub.
- Architected a multi-layer caching solution (Redis + IndexedDB) that accelerated app load times and reduced API calls by over 50%.
- Championed developer experience improvements by launching a CLI for SDK integration, linting automation, and telemetry debugging.
- Integrated OAuth2 authentication using Firebase Auth and built role-based access controls for internal tooling.
- Contributed to a suite of reusable UI components in React using Storybook to maintain consistency across teams.
- Coordinated with QA to implement Cypress E2E test suites and CI validations across all major modules.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built fullstack features using React, Express.js, and PostgreSQL for internal workflow and scheduling platforms.
- Implemented detailed tracking for user navigation, interaction events, and engagement scoring with IndexedDB syncing logic for offline support.
- Deployed RESTful APIs and backend logic in Node.js to manage analytics ingestion and dynamic chart rendering.
- Led migration of legacy PHP tools to modern JavaScript/Node-based solutions with improved reliability and 3x performance gains.
- Delivered a plugin-based internal dashboard system with customizable modules and visual configuration of reports.
- Collaborated with infra team to containerize services with Docker and orchestrate deployments with Kubernetes.
- Created multi-language support using i18n libraries, enabling wider adoption across international teams.
- Implemented developer-mode toggle to simulate telemetry payloads for manual and automated integration testing.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Maintained and extended features on a React and Java-based CMS tool for internal editorial staff.
- Wrote data processing jobs in Java to enrich behavioral data and forward results into ElasticSearch clusters.
- Developed testing framework for API payload validation and schema compliance using JSON Schema and JUnit.
- Collaborated in agile sprints with cross-functional product owners to address usability pain points in internal dashboards.
- Contributed to unit, integration, and snapshot testing libraries for React codebase using Jest and Enzyme.
- Enabled dynamic form rendering and behavior tracking tied to embedded components in the client-facing platform.
- Authored detailed usage guides and internal wikis to improve developer onboarding and SDK utilization.
- Debugged edge-case serialization issues with Protobuf and improved consistency across gRPC message versions.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Supported React-based UI development for internal monitoring dashboards and alerting tools.
- Created mock APIs and testing scaffolds for simulating behavior analytics events across multiple device types.
- Implemented SQL/NoSQL data syncs between local IndexedDB and MongoDB backends.
- Assisted senior engineers in integrating Firebase for event tracking, crash reporting, and user metrics.
- Participated in code reviews and contributed patches improving telemetry reliability across key endpoints.
- Helped with initial deployment of Kubernetes clusters and service discovery configurations.
- Configured automated webhook and Pub/Sub-based logging pipelines for deployment auditing.
- Developed custom browser extensions for QA to visualize telemetry tags and data points in real-time.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Google Cloud Certified – Associate Cloud Engineer (2023)
 - ❖ AWS Certified Developer – Associate (2022)
 - ❖ Fullstack JavaScript Developer Certification – freeCodeCamp (2020)
 - ❖ Advanced React and TypeScript – Udemy (2021)
-

PROJECTS

- ✓ **Telemetry Insights Platform**
Built an internal analytics tool using React, GCP BigQuery, and Firebase to visualize developer-generated user behavior data in near real-time with customizable dashboards.
- ✓ **Unified Instrumentation SDK**
Developed a lightweight SDK that abstracted behavioral event tracking for web, desktop, and mobile clients, providing built-in buffering, schema validation, and offline queuing.
- ✓ **GCP Infrastructure Observability**
Implemented cross-service logging, metrics, and alerts using Stackdriver, Pub/Sub, and Dataflow to monitor system health and track API adoption across services.
