

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 8+ years of experience building scalable, robust, and high-performance web applications using React, NestJS, TypeORM, and PostgreSQL. Strong background in architecting RESTful APIs, asynchronous microservice communication with RabbitMQ, and integrating complex UI/UX designs. Proven track record of mentoring teams, collaborating with cross-functional stakeholders, and driving continuous improvement across frontend and backend systems.

TECHNICAL SKILLS

- **Frontend:** React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind, Redux, Next.js
- **Backend:** NestJS, Node.js, Express.js, TypeORM, Prisma, PostgreSQL, MongoDB, MySQL
- **Messaging & APIs:** RabbitMQ, REST APIs, WebSockets, GraphQL
- **DevOps & Tools:** Docker, Git, GitHub Actions, CI/CD, PM2, NGINX
- **Testing:** Jest, Cypress, Mocha, Postman
- **Cloud & Infrastructure:** AWS (EC2, S3, RDS), DigitalOcean, Heroku
- **Agile Tools:** Jira, Trello, Confluence, Slack
- **Languages:** TypeScript, JavaScript, SQL, Bash

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led development of scalable SaaS applications using React.js and NestJS, implementing complex features such as real-time dashboards, asynchronous task queues, and multitenant data access.
- Designed robust PostgreSQL schemas and optimized TypeORM queries, achieving a 30% improvement in data retrieval performance for enterprise analytics dashboards.
- Integrated RabbitMQ for asynchronous communication between distributed services, enhancing message delivery reliability and decoupling system modules for scalability.
- Refactored legacy monolith into modular microservices, leveraging NestJS architecture principles and event-driven design patterns for enhanced maintainability.
- Implemented full CI/CD pipelines using GitHub Actions and Docker, reducing deployment time by 70% and ensuring zero-downtime releases across staging and production environments.
- Collaborated closely with UI/UX designers to convert Figma mockups into pixel-perfect, responsive React components, improving customer satisfaction scores by 18%.

- Conducted thorough code reviews, enforced clean architecture practices, and mentored junior developers through pair programming and technical sessions.
- Spearheaded integration of third-party APIs including Stripe, Google Maps, and HubSpot CRM, ensuring seamless data synchronization and secure API access management.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed full stack marketing automation platform using React and Node.js with a strong focus on responsive front-end components and reusable backend services.
- Introduced TypeScript across frontend and backend codebases, increasing code maintainability and reducing runtime bugs by 40% over six months.
- Architected PostgreSQL models with TypeORM for campaign tracking and reporting modules, supporting custom queries for advanced segmentation and analytics.
- Built RESTful APIs with robust validation, authentication, and role-based access controls to support multi-level user permissions in enterprise marketing tools.
- Established a robust error-handling and retry logic system using RabbitMQ, enhancing fault tolerance and improving system uptime for background jobs.
- Worked with designers to implement interactive, dynamic UIs while ensuring accessibility standards (WCAG 2.1) were met across all pages and components.
- Enhanced project scalability and maintainability by introducing NX monorepo structure, resulting in a 35% reduction in build and test pipeline complexity.
- Participated in sprint planning, retrospectives, and daily stand-ups, contributing consistently to backlog grooming and velocity tracking using Agile methodologies.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed internal CRM and client dashboards using React and Express.js, implementing intuitive user workflows and seamless data integrations.
- Created efficient PostgreSQL relational schemas and optimized complex SQL joins for reporting and analytics across multi-gigabyte datasets.
- Implemented reusable components and React hooks, streamlining development and ensuring UI consistency across the application ecosystem.
- Introduced real-time WebSocket connections to track order statuses, enabling live updates and reducing customer support inquiries by 22%.
- Established Git workflows with feature branching and peer reviews, improving collaboration and reducing bugs in production deployments.
- Collaborated with QA to build end-to-end tests using Cypress, ensuring high coverage and automating regression testing for every release.
- Led migration of JavaScript codebase to TypeScript, introducing interfaces and types to improve developer onboarding and refactoring confidence.
- Trained junior developers through code walkthroughs and best practices sessions, fostering team growth and faster onboarding.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Delivered e-commerce integrations using custom Node.js APIs and PostgreSQL, enabling product sync and real-time inventory updates for Magento and WooCommerce clients.
- Built admin dashboards with React.js, enabling marketing teams to manage promotions, pricing, and product listings through intuitive UI.
- Implemented user authentication and role-based access control across backend services using Passport.js and JWT strategies.
- Worked on performance optimizations using lazy loading, code-splitting, and server-side rendering strategies to enhance page load times.
- Wrote comprehensive unit and integration tests using Mocha and Chai, achieving 85%+ test coverage across new modules.
- Ensured mobile-first design principles across UI components, supporting seamless browsing across tablets and smartphones.
- Participated in client meetings to gather requirements, estimate effort, and suggest tech solutions that aligned with business needs.
- Created data import/export utilities using Node streams and CSV parsing libraries, reducing manual onboarding for large clients.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in building web-based tools using JavaScript and PHP, working closely with senior engineers to understand full lifecycle development.
- Created PostgreSQL and MySQL schemas to support core business logic and wrote scripts to automate recurring data cleanup tasks.
- Designed small components with jQuery and Bootstrap, focusing on responsive layout and basic form validations.
- Contributed to REST API development, adding new endpoints and documenting usage in internal wiki pages for easier onboarding.
- Participated in code reviews and absorbed clean code practices such as single responsibility, DRY, and modular structure.
- Collaborated with QA to replicate and troubleshoot UI bugs, gaining hands-on experience in debugging front-end issues.
- Shadowed backend engineers to learn about server architecture and Node.js-based API development.
- Delivered a final internship project that involved building a mini CRUD application and presenting results to the team.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Full Stack Web Development with React – Coursera
 - ❖ TypeScript: The Complete Developer's Guide – Udemy
 - ❖ NestJS Zero to Hero – Udemy
 - ❖ PostgreSQL Performance Tuning – Pluralsight
 - ❖ RabbitMQ for Developers – LinkedIn Learning
 - ❖ AWS Cloud Practitioner Essentials – AWS Training
-

PROJECTS

Realtime SaaS Analytics Dashboard

- Built with React.js, NestJS, PostgreSQL, RabbitMQ
- Aggregates millions of user events across microservices, processes them asynchronously, and visualizes insights with real-time streaming updates
- Fully integrated CI/CD, containerized with Docker, and deployed on AWS EC2 with secure API gateway and rate-limiting controls

Headless E-commerce Platform

- Custom full stack solution built using React and NestJS with PostgreSQL and Redis
- Supports dynamic pricing, inventory sync, discount rules, and checkout integration via Stripe
- Backend architecture uses message queues for order processing via RabbitMQ and caching via Redis
