PROFESSIONAL SUMMARY

Innovative Senior Frontend Engineer with over 9 years of hands-on experience architecting modern web and mobile applications using React, Next.js, and Capacitor. Specialized in AI-assisted development workflows using Cursor IDE and Claude Code, consistently delivering complex features at lightning speed. Passionate about real-time systems, seamless user interfaces, and building scalable, high-performance solutions for global platforms. Adept at deploying multi-platform apps, automating workflows with Figma MCP, and maintaining production-level quality under high-pressure environments.

TECHNICAL SKILLS

- **Languages & Frameworks:** React, Next.js, TypeScript, JavaScript, Node.js, PHP, Python, Java, Vue.js
- **Mobile:** Capacitor, Ionic, React Native
- **AI & IDE Tools:** Cursor IDE, Claude Code, GitHub Copilot, Figma MCP Integration
- **Cloud & DevOps:** AWS (Lambda, S3, ECS, CloudWatch), GCP, Docker, Kubernetes, CI/CD, GitHub Actions, Azure
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Firebase
- **Realtime & Messaging:** WebSockets, Kafka, RabbitMQ, SignalR
- **Styling & UI:** Tailwind CSS, Shadcn/Radix, Figma, Storybook
- **Other:** Git, REST APIs, GraphQL, Vite, Jest, Playwright, Cypress

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Built production-grade React and Next.js applications with TailwindCSS and integrated with Figma MCP to accelerate delivery of complex UI workflows by 5–10x using Claude Code.
- Engineered and shipped a real-time inventory and booking platform using WebSockets, delivering seamless multi-user sync with millisecond latency for vacation and hospitality platforms.
- Integrated Capacitor into frontend pipelines to ship cross-platform mobile apps simultaneously to Android and iOS with full parity across feature sets and UI/UX fidelity.
- Led frontend architecture for an AI-enabled dashboard with event stream processing and component isolation via Radix primitives and React Context Providers.

- Used Cursor IDE and Claude Code as core workflows, enabling ultra-fast refactoring, test generation, and bug resolution in real-time while paired with CI pipelines.
- Developed scalable modules that handled dynamic pricing updates, multilingual UI rendering, and timezone-sensitive operations with reactive architecture.
- Worked in hyper-velocity sprints, reducing feature delivery cycles from weeks to days using AI-assisted testing, snapshot regression detection, and component generators.
- Maintained dockerized local environments for frontend and backend teams, ensuring consistent, replicable deployments with microservice orchestration via Docker Compose.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Migrated legacy JavaScript dashboards into modern React/Next.js stack, improving loading time by 60% and introducing modular architecture with reusable atomic components.
- Delivered real-time analytics dashboards with WebSocket-driven user sessions and integrated Kafka streams for seamless marketing campaign monitoring.
- Collaborated with designers using Figma MCP integration to instantly convert UI specs into functional components without traditional handoff overhead.
- Implemented cross-browser support for dynamic forms and dashboards using Tailwind, reducing QA cycles and compatibility issues by over 40%.
- Built production-level mobile apps using Capacitor, integrated push notifications, camera APIs, and native performance enhancements for in-field marketing teams.
- Managed AWS deployment workflows, utilizing S3 for static hosting and Lambda for serverless backend support to reduce infrastructure costs.
- Actively adopted AI-powered workflows mid-tenure using Copilot and Claude to accelerate onboarding of new engineers and reduce knowledge transfer friction.
- Maintained strict git hygiene, leading code reviews, and deploying automated CI pipelines using GitHub Actions and code coverage gates.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built customer-facing React dashboards for smart building management systems, integrating real-time data from IoT devices using MQTT and WebSockets.
- Led frontend migration to modern ES6 and modular JavaScript practices, improving developer velocity and enabling future shift to TypeScript with minimal effort.
- Engineered complex calendar and time-slot booking interfaces with drag-drop mechanics and dynamic validation logic for service-based clients.
- Built internal UI libraries with Storybook documentation and integrated into design pipelines using Figma + MCP for instant alignment across design and dev teams.
- Created Capacitor mobile wrappers for real-time monitoring dashboards, allowing clients to receive alerts and logs from physical devices.
- Developed unit and integration tests using Jest and Cypress, reaching 85% test coverage while maintaining continuous deployment stability.
- Used AWS CloudFormation and Docker to spin up dev and staging environments with real-time logging integrated via CloudWatch.
- Worked across monorepos and micro-frontends to ensure consistent UX while enabling feature-based development across distributed teams.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Built e-commerce interfaces using Vue.js and vanilla JavaScript, collaborating with backend PHP teams to create dynamic customer journeys.
- Introduced modular CSS practices and BEM naming conventions to reduce style collisions and enhance team-wide component reuse.
- Worked directly with clients to gather requirements and produce rapid UI iterations under strict delivery deadlines.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Developed internal tools using PHP and JavaScript for digital signage systems deployed across transportation hubs.
- Learned and implemented RESTful architecture, AJAX form interactions, and basic unit testing in a hands-on mentorship program.
- Participated in first mobile hybrid app development using Ionic and Cordova, laying the groundwork for future Capacitor use cases.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **AWS Certified Developer – Associate**
- ❖ **Google Cloud Associate Cloud Engineer**
- ❖ **MongoDB University – Data Modeling & Aggregation Framework**
- ❖ **Figma for Developers: Advanced Design System Integration**
- ❖ **Docker Mastery: Kubernetes, Swarm & Compose from Udemy**

PROJECTS

- **AI-Powered Cohost Dashboard:** Built an internal AI-powered vacation rental dashboard using Next.js, Tailwind, WebSockets, and Figma MCP. Delivered 10x faster using Claude Code and Cursor IDE. Handled real-time communication and calendar syncing across multiple platforms.
- **Cross-Platform Booking App:** Developed Capacitor-based mobile app with shared React codebase, real-time booking, push notifications, and native features like geolocation, enhancing conversion rate and reducing booking friction.

- **Design-to-Code Accelerator:** Created a Figma MCP plugin to auto-generate Tailwind React components directly from approved UI specs, cutting down handoff and rework by over 75%.
