

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and results-driven Senior Software Engineer with 8+ years of full-stack JavaScript experience, specializing in React, Node.js, Vue.js, and Agile team leadership. Proven ability to lead cross-functional teams in delivering high-performance web applications with clean architecture, scalable design, and robust CI/CD pipelines. Passionate about mentoring, code quality, and implementing modern best practices across frontend and backend stacks.

TECHNICAL SKILLS

- **Languages & Frameworks:** JavaScript (ES6+), TypeScript, HTML5, CSS3, React, Vue.js, Angular, Node.js, Express.js, Next.js
- **State & Data:** Redux, React Query, Vuex, Zustand, RESTful APIs, WebSockets, GraphQL
- **Tooling & Build:** Webpack, Vite, Babel, ESLint, Prettier, npm, Yarn, Vercel
- **DevOps & CI/CD:** GitHub Actions, GitLab CI, Docker, AWS (EC2, S3), Vercel, Netlify
- **Testing & Quality:** Jest, React Testing Library, Cypress, Playwright, Postman
- **Project Management:** Agile, Scrum, Kanban, Jira, Confluence
- **Version Control:** Git, GitHub, GitLab, Bitbucket
- **Soft Skills:** Team Leadership, Mentorship, Architecture Planning, Problem Solving

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led a team of 6 developers in building complex enterprise dashboards using React, Redux Toolkit, and TypeScript, integrating with real-time data streams via WebSockets and RESTful APIs.
- Designed frontend architecture standards, enforced scalable folder structures, reusable hooks, and consistent component libraries using Atomic Design principles.
- Directed the setup and maintenance of CI/CD pipelines using GitHub Actions, automating tests, linting, builds, and deployments to AWS and Vercel environments.
- Actively mentored junior engineers through code reviews, pair programming, and design walkthroughs, increasing team code quality and confidence in modern React.
- Integrated GraphQL APIs with Apollo Client to optimize query performance and minimize over-fetching in dynamic enterprise applications.

- Led cross-functional sprint planning with product managers and QA to define clear acceptance criteria and ensure seamless delivery of new features bi-weekly.
- Conducted performance audits using Lighthouse and implemented lazy loading, image optimization, and memoization, reducing page load time by over 40%.
- Championed testing practices by increasing test coverage to 90% with unit and E2E tests using Jest and Cypress, reducing production bugs by over 30%.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed full-stack marketing campaign platforms with Vue.js frontend and Node.js backend, handling over 200k daily active users across multiple countries.
- Migrated legacy jQuery codebases to Vue 3 and Vuex, reducing technical debt and improving developer productivity through reusable components and modular architecture.
- Implemented RESTful API layers with Express.js and integrated third-party services for SMS, email, and push notifications in a scalable microservices structure.
- Collaborated with UI/UX designers to implement pixel-perfect designs, emphasizing accessibility (WCAG 2.1), responsiveness, and cross-browser compatibility.
- Used GitLab CI pipelines for automated build, test, and deploy, drastically reducing manual deployment errors and speeding up delivery cycles.
- Introduced ESLint and Prettier in the codebase, increasing code consistency and decreasing code review cycle times across the frontend teams.
- Participated in roadmap planning sessions and defined technical milestones for large-scale product launches alongside stakeholders and business analysts.
- Led frontend standups, architecture reviews, and retrospectives, ensuring clear communication, alignment, and ownership within agile sprint workflows.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built modular frontend systems using Angular and RxJS for construction ERP systems, enabling dynamic data handling and real-time updates for warehouse management.
- Designed custom UI components and libraries using Angular Material, enhancing code reusability and UX consistency across multiple enterprise clients.
- Architected backend APIs in Node.js and MongoDB to handle business-critical workflows such as budgeting, invoicing, and inventory tracking.
- Refactored large AngularJS legacy apps into Angular 7+, applying best practices in modular routing, lazy loading, and observables.
- Collaborated with QA engineers to implement automated UI tests using Protractor, significantly decreasing regression issues after each release.
- Led documentation initiatives using Storybook and internal wikis to ensure component reusability and onboarding support for new team members.
- Contributed to weekly sprint reviews and demos, presenting features to internal stakeholders and gathering early feedback for faster iteration cycles.
- Participated in user research sessions to gather feedback on usability and improve application flows for warehouse operators and field technicians.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Developed React-based single-page applications for clients in e-commerce and tourism industries with a focus on SEO, SSR, and fast initial page loads.
- Built backend features using Express.js and PostgreSQL to support booking flows, user authentication, and localized content rendering.
- Integrated third-party services such as Stripe for payments and Mailchimp for newsletter subscriptions using serverless middleware.
- Created reusable components and form logic with Formik and Yup, enhancing developer speed and reducing form validation bugs across the platform.
- Conducted A/B testing integrations using Google Optimize to iterate on user flow optimizations based on conversion metrics.
- Worked with designers using Zeplin and Figma for handoff, ensuring perfect UI fidelity and smooth communication.
- Implemented responsive layouts using CSS Grid and Flexbox that adapted seamlessly to mobile, tablet, and desktop views.
- Deployed builds via Netlify with automated previews per pull request, improving the feedback loop and collaboration with product owners.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Supported frontend development with vanilla JavaScript and jQuery, contributing to internal tools for logistics and inventory tracking platforms.
- Wrote custom data transformation scripts in Node.js to automate manual CSV to JSON conversion pipelines, improving operational efficiency.
- Created internal dashboards with Chart.js and REST APIs for real-time sales monitoring and trend analysis.
- Collaborated with senior engineers to refactor monolithic codebases into component-based frontend structures with reusable parts.
- Participated in weekly QA sessions, debugging issues and writing fixes that improved the app's stability and usability.
- Documented frontend components and user flows for onboarding and future reference, aiding in knowledge transfer across the team.
- Developed custom animations using GreenSock for interactive visualizations and responsive touch gestures on hybrid tablet devices.
- Assisted with version control workflows, handling pull requests and merge conflict resolution during collaborative feature development.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ JavaScript Algorithms and Data Structures – freeCodeCamp
 - ❖ Full Stack Developer Nanodegree – Udacity
 - ❖ React Advanced – Meta/Coursera
 - ❖ Certified Scrum Developer (CSD) – Scrum Alliance
 - ❖ Node.js Microservices – Pluralsight
-

PROJECTS

TeamSpace (Internal PM Tool)

Built a full-stack productivity tool with React, Node.js, and PostgreSQL for managing sprints, tracking issues, and enabling async stand-ups for remote teams.

- Implemented calendar integrations and kanban-style task boards with drag-and-drop interactions
- Focused on clean UI, keyboard accessibility, and responsive interactions across all screen sizes

Ecomlytics

Developed an analytics dashboard for e-commerce stores integrating Google Analytics, Shopify, and Stripe, built with Vue.js and NestJS.

- Visualized KPIs using Chart.js and D3.js with dynamic date filters and custom metric selection
- Supported real-time alerts with WebSockets and RabbitMQ for fraud detection and conversion anomalies
