

# CRISTOFF STAN

## Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com  
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

## PROFESSIONAL SUMMARY

Results-driven Senior Frontend Developer with 9+ years of experience building highly scalable, developer-focused applications using React.js in startup and cloud-native environments. Strong leadership experience mentoring teams and working cross-functionally with product, backend (Golang), and DevOps teams. Skilled in Kubernetes, CI/CD, modern testing frameworks (Cypress, Playwright), and intuitive UI/UX design with a passion for shipping fast and iterating with user feedback. Adept at thriving in fast-paced, ambiguous settings while driving frontend architecture and contributing to backend integration and platform delivery.

## TECHNICAL SKILLS

- **Frontend:** React.js, TypeScript, JavaScript (ES6+), Redux, Next.js, Tailwind CSS, HTML5, CSS Modules
- **Backend Collaboration:** Golang (API integration), Node.js, Express.js, REST, GraphQL
- **Cloud & Infrastructure:** AWS (Lambda, S3, CloudFront), GCP (Cloud Run, Firebase), Docker, Kubernetes, Helm, Terraform
- **DevOps:** CI/CD with GitHub Actions, GitLab CI, Vercel, Jenkins; monitoring with Prometheus/Grafana
- **Testing:** Playwright, Cypress, Jest, React Testing Library, TestCafe
- **Databases:** PostgreSQL, MySQL, MongoDB, Firebase Firestore, Redis
- **Other Tools:** Figma, Webpack, Storybook, Git, Jira, Confluence

## WORK EXPERIENCE

### Senior Software Engineer

#### Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led a team of 3 frontend engineers to build a React.js developer-facing platform, optimizing component reuse, state management, and testing coverage in a Kubernetes-hosted architecture
- Developed modular UI systems with Tailwind CSS and custom design tokens, creating seamless integration with backend services developed in Golang and tested using end-to-end Cypress automation
- Architected frontend CI/CD workflows using GitHub Actions and integrated Playwright for visual regression testing, reducing deployment rollback rate by over 70% in the first quarter

- Collaborated with backend engineers to define and integrate REST and GraphQL APIs built in Go, enabling bi-directional syncing of developer metadata across services
- Drove accessibility and performance audits using Lighthouse and custom scripts, consistently achieving 95+ scores in production builds deployed via GCP and Vercel
- Introduced agile delivery standards and sprint planning to improve delivery timelines, and mentored junior developers to independently lead feature delivery pipelines
- Worked directly with DevOps teams on Kubernetes manifests, Helm charts, and cloud-native configurations, reducing onboarding complexity for frontend environments
- Coordinated developer interviews and internal training sessions to scale the frontend team while maintaining strong code quality and agile discipline

## **Software Engineer**

### **Syscom Digital**

**October 2019 – August 2021**

Bucharest, Romania (Remote)

- Built high-performance React.js dashboards for marketing automation platforms and integrated real-time data streams via WebSockets and REST APIs written in Golang
- Collaborated cross-functionally with backend developers and data engineers to render highly dynamic visual components synced with analytics engines and PostgreSQL datasets
- Engineered CI pipelines in GitLab CI/CD with Dockerized builds and automated test suites (Jest + Cypress), cutting QA validation time by 40% for major releases
- Applied TDD practices with unit and integration tests, ensuring robust component isolation and reuse across multiple web applications and internal tools
- Helped refactor legacy jQuery and AngularJS codebases into modern modular React and TypeScript code, gradually increasing maintainability and documentation
- Initiated biweekly frontend retros and review cycles to improve team knowledge sharing and feedback, fostering a growth culture within the dev team
- Built custom admin panels using reusable UI components for customer-facing services integrated into a marketing orchestration backend
- Contributed to documentation efforts using Storybook and Notion to formalize component usage, props validation, and state interactions

## **Software Developer**

### **Soft Build**

**June 2016 – July 2019**

Timișoara, Romania (Remote)

- Developed enterprise UI components in React and Redux with support for localization, dynamic configuration, and A/B testing pipelines integrated into customer portals
- Integrated frontend components with backend APIs (built in Golang and PHP) through Swagger-based documentation and Postman collection-driven development
- Implemented responsive design systems using SCSS and Grid/Flexbox, ensuring support across legacy and modern browsers with 98% coverage
- Led the frontend revamp of the main SaaS platform using Next.js and server-side rendering techniques, significantly improving SEO and time-to-interactive metrics
- Assisted DevOps teams in containerizing frontend apps with Docker, improving environment parity between development, staging, and production environments
- Wrote Cypress E2E test suites for user flows across login, dashboard, reporting, and configuration modules, which became part of the core test pipeline
- Designed and implemented feature flags and rollout strategies for experimental UIs using LaunchDarkly and internal toggle systems

- Participated in sprint planning, retrospectives, and customer feedback reviews to realign frontend priorities based on real-world UX pain points

## **Software Developer**

### **Decima Digital**

**November 2015 – April 2016**

Tallinn, Estonia

- Contributed to frontend development of eCommerce interfaces using jQuery and React for an international retailer undergoing digital transformation
- Supported refactoring tasks from PHP monoliths to microservices by isolating frontend logic and creating standalone React modules with REST integration
- Developed page builder templates used by marketing teams for landing pages, with full customization support driven by backend content schemas
- Improved performance through lazy loading and code-splitting strategies in Webpack, reducing total bundle size by over 30%
- Participated in weekly syncs with cross-functional teams across Europe to coordinate development milestones and resolve blockers in shared modules
- Integrated Stripe and PayPal payment workflows into single-page apps and provided support for testing and QA teams during deployments
- Created detailed documentation and onboarding guides for future team members as part of knowledge retention efforts
- Deployed static assets to AWS S3 with CloudFront distribution setup for performance optimization and secure delivery

## **Software Developer Intern**

### **Borna Technology**

**September 2014 – August 2015**

Tallinn, Estonia (On-Site)

- Developed internal tools and dashboards using Bootstrap, jQuery, and vanilla JavaScript, supporting analytics workflows for the operations team
  - Learned basic Golang through backend team pair-programming and contributed to endpoint consumption via REST in frontend modules
  - Created PDF export functionality for report builders and implemented dynamic data filtering across tables using DataTables and JS plugins
  - Participated in code reviews and unit testing training sessions to understand foundational engineering best practices
  - Supported small feature enhancements and bug fixes across both web and admin panels in active use by customer support agents
  - Integrated Google Maps API to support geolocation features in the internal CRM tool
  - Helped write onboarding scripts and documentation for future interns and junior engineers to reduce ramp-up time
  - Attended regular team syncs and worked in an agile flow to deliver weekly functional updates during internship cycles
-

## EDUCATION

### Tallinn University

Bachelor's Degree in Computer Science,  
2010 – 2014

---

## CERTIFICATIONS

- ❖ Certified Kubernetes Application Developer (CKAD) – Linux Foundation, 2024
  - ❖ AWS Certified Developer – Associate, 2023
  - ❖ Google Cloud Certified – Associate Cloud Engineer, 2022
  - ❖ React.js Frontend Professional – Meta / Coursera, 2021
- 

## PROJECTS

- ✓ **CI-Friendly Developer Portal**  
Built a full developer dashboard with React.js, Golang-based backend, and Kubernetes-powered microservices. Implemented custom UI workflows and testing automation with Playwright.
- ✓ **Smart Deployment Tool**  
Designed and shipped a web tool for automated Canary releases with dynamic frontend toggles (React), backend coordination (Go), and cloud-native integration with GitOps pipelines.
- ✓ **Visual Regression Monitoring**  
Created a frontend testing suite with Playwright + Percy to catch UI drift post-deployment. Hooked into CI/CD to provide visual QA feedback during PR reviews.
