

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Creative and detail-oriented Senior Full Stack Engineer with 9+ years of experience delivering scalable, performant web applications using React.js, Next.js, Python, JavaScript, and PostgreSQL. Proven success in building dynamic frontend interfaces, designing efficient backend architectures, and deploying full-stack applications in cloud environments. Strong background in remote team collaboration, Agile methodology, and integrating AI-assisted development workflows. Passionate about modern engineering principles, continuous learning, and driving innovation in cross-functional teams.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, JavaScript, TypeScript, TailwindCSS, HTML5, CSS3, SSR, CSR, Server Actions
- **Backend:** Python (Flask/FastAPI), Node.js, Express.js, Java (Spring Boot), REST APIs, GraphQL
- **Database:** PostgreSQL, MySQL, Aurora Serverless, MongoDB, Redis
- **Tools:** Git, GitHub Actions, Docker, Vercel, Webpack, ESLint, Prettier, Figma, Postman
- **Cloud & DevOps:** AWS (Lambda, S3, EC2), Vercel, CI/CD Pipelines, Terraform (basic), Serverless architecture
- **AI Integration:** GitHub Copilot, Tabnine, AI code completion tools, prompt-based coding accelerators
- **Methodologies:** Agile (Scrum/Kanban), TDD, Pair Programming, CI/CD, Microservices Architecture
- **Soft Skills:** Team collaboration, communication, mentoring juniors, decision-making under pressure

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Architected and built full-stack web platforms using React.js and Next.js on the frontend and Python (FastAPI) for backend services, enhancing user interactions across multiple applications.
- Developed a server-rendered dashboard platform with dynamic route management and server actions, reducing page load time by 40% and improving SEO efficiency for enterprise clients.
- Integrated PostgreSQL and Aurora Serverless for reliable data storage and query optimization, introducing partitioning and caching strategies that improved data access speed significantly.
- Led design of backend microservices, applying domain-driven design, SOLID principles, and RESTful API best practices while ensuring scalability and security standards were maintained.

- Utilized GitHub Copilot and other AI-assisted coding tools to increase development velocity, minimizing boilerplate and increasing delivery pace on large module implementations.
- Collaborated with cross-functional teams including product, design, and DevOps to iterate on feature sets rapidly in Agile sprints, delivering high-impact features every 2-week sprint.
- Mentored junior developers and conducted peer code reviews to ensure adherence to best practices, clean architecture, and maintainable code.
- Automated deployment pipelines using GitHub Actions and Docker, integrating them with AWS and Vercel environments to ensure smooth CI/CD processes with minimal downtime.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Delivered full-stack promotional platforms for enterprise clients using React.js, Node.js, and PostgreSQL, integrating CRM features and dynamic offer builders with advanced analytics.
- Developed responsive UIs with reusable components in React, enhancing mobile-first designs and improving conversion rates by over 25% on marketing campaigns.
- Integrated third-party APIs and payment gateways to enable seamless transactions and data synchronization across marketing channels in real-time.
- Built backend microservices in Node.js and Express, ensuring API responses adhered to performance SLAs under concurrent traffic scenarios.
- Created admin panels with secure authentication and real-time data metrics using JWT, role-based access control, and WebSocket updates.
- Optimized SQL queries and schemas for PostgreSQL, ensuring ACID compliance while implementing partitioned tables for large datasets.
- Used ESLint, Prettier, and CI pipelines to enforce code quality and consistency across frontend and backend repositories.
- Participated in Agile ceremonies, sprint planning, and retrospective meetings to drive iterative improvements and velocity.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Designed and implemented full-stack web portals using React.js and Django, combining performant UIs with robust backend logic and relational data models.
- Created dynamic forms and dashboard systems using React and Redux, integrated with Django REST Framework APIs for seamless CRUD operations and real-time updates.
- Refactored legacy Python codebases, adopting PEP8 and modularization techniques to improve testability, documentation, and maintainability.
- Built Postgres-backed data systems with complex relationships and multi-user access control for enterprise-grade content management tools.
- Introduced Dockerized environments for local development and production deployment, enabling consistency and faster onboarding.
- Assisted in server administration tasks including Nginx setup, SSL configuration, and log monitoring across various deployment stages.
- Designed test suites using PyTest and Jest, increasing unit test coverage across modules and improving defect detection pre-deployment.
- Mentored interns and junior developers, supporting their growth through code reviews and guided mini-projects.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Implemented mobile-first e-commerce pages using jQuery, Bootstrap, and JavaScript with Python backend APIs.
- Maintained and enhanced a custom CMS system that supported dynamic content rendering and SEO optimization tools.
- Enhanced page rendering speed by optimizing SQL query execution plans and introducing caching logic in views.
- Integrated payment providers and analytics tools (Google Tag Manager, Facebook Pixel) to optimize user journeys.
- Provided QA support and documentation for release cycles to ensure timely delivery with low bug counts.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted with building internal tooling and dashboards using HTML, CSS, and vanilla JavaScript while learning backend development in Python.
- Collaborated with senior developers to implement RESTful APIs for reporting modules used by internal stakeholders.
- Maintained legacy code and contributed to documentation and testing of APIs to increase long-term maintainability.
- Participated in debugging sessions and performed bug triage and resolution across UI/UX components and backend logic.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ Full-Stack Web Development with React – Coursera / Hong Kong University of Science and Technology
 - ❖ Python for Everybody – Coursera / University of Michigan
 - ❖ PostgreSQL for Developers – Udemy
 - ❖ Building Scalable Apps with Serverless on AWS – edX / AWS
 - ❖ GitHub Copilot for Developers – LinkedIn Learning
-

PROJECTS

AI-Assisted Code Review Platform

- Built a platform integrating GitHub Copilot, ESLint, and OpenAI APIs to provide inline code suggestions and automated feedback on pull requests across frontend and backend repositories.

Next.js Job Portal

- Developed a server-rendered job board using Next.js, PostgreSQL, and Prisma ORM; included search, filter, authentication, and CRUD functionality with CI/CD on Vercel.

React Analytics Dashboard

- Created a customizable, responsive dashboard with real-time data visualization using Chart.js, React, and WebSockets for an IoT-based client system.
