

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Passionate Senior Software Developer with over 8 years of professional experience specializing in cross-platform mobile app development using React Native and JavaScript/TypeScript. Proven track record in delivering modular, high-performance applications with deep attention to UX, native integrations (Swift/Kotlin), and automated testing strategies. Demonstrated excellence in team collaboration, code quality, and continuous integration workflows. Adept at bridging native and React Native modules to enhance app capability and user experience.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Swift, Kotlin, HTML5, CSS3, SQL
- **Frameworks & Libraries:** React Native, React.js, Redux, Expo, Jest, Detox, Node.js
- **Mobile Development:** Native Modules (iOS/Android), Xcode, Android Studio, App Center
- **Testing:** Unit Testing, E2E Testing, Jest, Mocha, Chai, Detox
- **DevOps & Tools:** Git, GitFlow, Trunk Based Development, Azure DevOps, CI/CD, Bitbucket, Jira
- **Cloud/Backend:** Firebase, REST APIs, GraphQL, AWS Amplify
- **Design & UX:** Figma, Adobe XD, Responsive UI, Accessibility

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and deployed React Native applications for large-scale clients, focusing on cross-platform consistency and native-level performance across iOS and Android platforms.
- Integrated native Swift/Kotlin modules into React Native environments to enhance device capabilities, including camera access, geolocation services, and push notifications.
- Led a team of 4 developers through agile sprints, provided mentorship in React Native architecture patterns, and conducted peer code reviews to ensure engineering best practices.
- Collaborated closely with designers and PMs to interpret complex product requirements into functional, scalable mobile features that reached over 500K users globally.
- Implemented unit and E2E testing using Jest and Detox to increase code coverage to 95% and improve overall app reliability and regression safety.
- Refactored legacy mobile codebases for modularization and maintainability, reducing app crash rates by 70% and improving build pipeline performance by 40%.

- Established trunk-based development with feature toggling, reducing merge conflicts and accelerating release cycles in CI/CD environments using Azure DevOps.
- Developed reusable UI components that adhered to Material Design and Apple HIG, significantly improving design consistency and reducing design-to-dev handoff friction.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Engineered hybrid mobile apps using React Native and Expo with deep linking, biometric authentication, and secure offline storage capabilities using SQLite and Redux Persist.
- Collaborated with QA and product teams to design and implement user-centric features that prioritized accessibility, responsiveness, and app stability across devices.
- Developed custom native modules for iOS (Swift) and Android (Kotlin) to bridge third-party SDKs such as Stripe and Google Fit with React Native.
- Migrated legacy Cordova-based mobile applications to React Native, reducing code complexity by 60% and improving app load time by over 45%.
- Optimized Redux state management and middleware to support real-time updates, socket connections, and data synchronization for critical business features.
- Participated in daily stand-ups and sprint planning to share progress, identify blockers, and contribute to roadmap planning with stakeholders and product owners.
- Maintained release versioning and OTA updates through App Center, ensuring consistent rollouts and rollback strategies across environments.
- Integrated Git workflows using GitFlow with Bitbucket pipelines for code branching, peer reviews, and automated test execution in CI pipelines.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed and maintained React Native apps in production environments, with advanced animations, real-time geolocation, and background task scheduling.
- Led initiative to implement dark mode and accessibility enhancements across Android/iOS apps to meet compliance standards and improve inclusivity.
- Architected modular navigation with React Navigation and handled complex stack structures using deep linking and dynamic routing based on user roles.
- Integrated third-party SDKs including Firebase Crashlytics, Mixpanel, and Google Maps SDKs to provide analytics, crash reporting, and location-based features.
- Refactored global styles and themes using Context API and SCSS modules, streamlining UI consistency and improving performance on lower-end devices.
- Implemented secure authentication flows using OAuth2 and JWT tokens, with encrypted storage using Keychain/Keystore integration.
- Maintained thorough documentation for APIs and internal libraries, significantly reducing onboarding time for new team members.
- Coordinated with designers to implement pixel-perfect UI layouts that matched Figma prototypes across varying screen dimensions.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Supported development of React Native components for proof-of-concept healthcare applications, integrating biometric and device sensor APIs.
- Collaborated with team members to debug cross-platform inconsistencies and improved UI responsiveness across iPhone 6 to iPad Pro and mid-tier Android devices.
- Participated in app testing and QA cycles, logging bugs, conducting A/B tests for UI layout decisions, and providing performance suggestions.
- Handled REST API integration with authentication headers and local data caching for offline mode.
- Built internal CLI tools in Node.js to streamline image asset generation and app build configuration based on environment flags.
- Introduced Git branching strategy and CI scripting to support automated deployment in staging environments.
- Worked with the product team to map user journeys and streamline feature rollout plans based on user feedback.
- Built reusable buttons, modals, and dropdowns with accessibility support and consistent gesture handling across platforms.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Supported mobile UI development for Android using Java and XML before transitioning to React Native for hybrid use cases and faster delivery cycles.
- Created automated test scripts for regression and UI tests, reducing QA workload by 30% and improving defect resolution timelines.
- Assisted in building internal admin panels using React.js and integrated them with REST APIs for managing users and mobile app data.
- Documented software modules and REST API endpoints for internal developer usage and onboarding materials.
- Learned Kotlin and Swift basics to support hybrid integration efforts and collaborated with senior engineers to create bridging modules.
- Contributed to design QA by matching UI elements pixel-by-pixel against design specs in Figma and Zeplin.
- Participated in sprint reviews and retrospectives, giving feedback and documenting lessons learned for improved iteration cycles.
- Researched app performance metrics and implemented memory and network optimizations on Android builds.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **React Native Advanced** – Udemy / Coursera
- ❖ **iOS Development with Swift** – CodeWithChris
- ❖ **Android App Development with Kotlin** – Udacity

- ❖ **JavaScript Algorithms and Data Structures** – freeCodeCamp
 - ❖ **Git & GitHub Professional Workflow** – Pluralsight
-

PROJECTS

- ✓ **MediTrack App** – Built a React Native health tracking app with iOS/Android support, deep linking, and biometric login. Used Firebase for backend and integrated native modules.
- ✓ **EduQuiz Mobile** – Created an education quiz app using React Native and Redux. Implemented offline sync and performance tracking via local storage and background tasks.
- ✓ **EventMate** – Developed a cross-platform app to manage event scheduling with real-time notifications and native calendar integration. Featured native modules for camera/photo sharing.
- ✓ **Shoplytics** – E-commerce analytics dashboard built in React Native, using custom charts and analytics libraries, deployed via Expo with OTA update support.
- ✓ **Habitu** – Personal habit tracker app with smooth gesture animations, theme toggling, and goal streak logic. Integrated Apple HealthKit and Android Fit APIs.
