

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative Senior Software Engineer with 9+ years of backend and full-stack development experience across startups and product-driven environments. Specialized in building resilient systems using Rust, Node.js, and TypeScript. Experienced in blockchain integrations, high-throughput data pipelines, and cloud infrastructure with AWS, GCP, Terraform. Eager to bring strong engineering skills and decentralization passion to RedStone's oracle and DeFi infrastructure.

TECHNICAL SKILLS

- **Languages:** Rust, TypeScript, Go, JavaScript, Node.js, Solidity, Bash, Python
- **Blockchain:** Solana, Ethereum, Smart Contracts, Web3, Wallet Connect, Node operations
- **Cloud Platforms:** AWS (Lambda, EC2, ECS, CloudWatch), GCP, Firebase
- **Infrastructure & DevOps:** Terraform, Docker, GitHub Actions, CI/CD pipelines
- **Databases:** MongoDB, PostgreSQL, MySQL, InfluxDB, NoSQL, Redis
- **Monitoring & Observability:** Grafana, Prometheus, Log aggregation, Alerting systems
- **Other:** Microservices, Event-driven architectures, Async pipelines, API design, OAuth2

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented Rust-based backend services to process high-frequency telemetry data from edge devices with minimal latency and high availability guarantees.
- Built modular microservices using Rust's async framework, ensuring message integrity and resilience in distributed data processing systems.
- Led infrastructure migration to AWS with Terraform, improving scalability and reducing deployment overhead across staging and production.
- Integrated real-time monitoring with InfluxDB and Grafana, automating threshold-based alerting to reduce MTTR for system anomalies.
- Developed blockchain-based authentication and identity modules using Solidity and integrated them with Ethereum testnets.
- Spearheaded an internal platform to run blockchain node infrastructure for Ethereum and Solana, enabling robust development testing.

- Mentored junior developers on best practices in Rust, async programming, and secure coding for blockchain systems.
- Partnered with frontend teams to expose efficient GraphQL and RESTful APIs from Rust microservices, enhancing frontend performance by 35%.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built scalable Node.js microservices supporting advertising platforms with integrations across MongoDB, Redis, and external payment APIs.
- Implemented batch-processing pipelines for user analytics using a hybrid SQL/NoSQL architecture, optimizing dashboard latency under heavy data loads.
- Integrated GCP services such as Firebase Functions and Firestore into production for real-time mobile campaign tracking.
- Automated infrastructure deployments using GitHub Actions and Terraform, enabling reliable provisioning across environments.
- Designed and deployed CI/CD pipelines that reduced release errors by 70% and increased delivery speed for client projects.
- Refactored legacy systems into TypeScript-based monorepos to improve maintainability and align code quality across teams.
- Collaborated with marketing and UX teams to integrate blockchain-based QR validation tools for campaigns using Ethereum testnets.
- Contributed to security auditing procedures and integrated JWT, OAuth2, and rate-limiting to harden backend APIs.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed distributed RESTful services in Node.js to manage user metadata and device states across IoT applications.
- Maintained and enhanced SQL-based reporting infrastructure for energy analytics, increasing reporting efficiency by 2x through advanced indexing strategies.
- Participated in the refactoring of backend systems for GDPR compliance, with a focus on data encryption and access control policies.
- Created scripts in Rust for hardware integration validation and simulation, laying groundwork for future embedded extensions.
- Coordinated deployments to AWS Lambda using Serverless Framework, optimizing costs on background computation-heavy services.
- Built custom dashboards using InfluxDB and Grafana to visualize time-series data, supporting multiple resolution levels.
- Developed internal CLI tools in Rust to automate deployment orchestration and service restarts for QA environments.
- Collaborated on a research-driven blockchain prototype to track hardware manufacturing metadata via smart contracts.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Delivered backend integrations in Node.js for e-commerce clients, handling payment and shipping data across multiple regional systems.
- Migrated old PHP services to modern JavaScript stacks using TypeScript, cutting codebase size while improving performance.
- Used Terraform to provision AWS infrastructure with CloudFront and S3 for global content delivery.
- Implemented logging pipelines with AWS CloudWatch and alerts on anomalies in payment reconciliation processes.
- Contributed to a real-time order tracking system using WebSockets and message queues to stream updates across client portals.
- Integrated payment APIs with secure cryptographic signature validation and automated error handling flows.
- Participated in client workshops for requirements gathering and architectural planning of scalable microservices.
- Implemented system health dashboards using open-source libraries and Grafana to provide real-time visibility into system states.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Contributed to a small team focused on implementing backend modules in Node.js and frontend components using React.
- Created API endpoints for CRUD operations on product catalogs, integrating MongoDB for fast access.
- Set up CI workflows for internal projects with automated unit and integration tests using Mocha and Jenkins.
- Explored blockchain fundamentals and implemented a simple Solidity contract as part of a company-led hackathon.
- Wrote bash scripts to automate backups and server cleanup tasks across dev and staging environments.
- Integrated OAuth2 for login features and added audit logging functionality to increase security compliance.
- Participated in daily scrums and sprint reviews, learning agile practices and continuous delivery.
- Documented the company's first API spec using OpenAPI and helped onboard future interns.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Certified Rust Developer – Rust Foundation
 - ❖ AWS Certified Solutions Architect – Associate
 - ❖ Google Cloud Associate Cloud Engineer
 - ❖ Blockchain Fundamentals – University at Buffalo (Coursera)
-

PROJECTS

Blockchain Node Runner Toolkit

- Developed a Rust-based CLI toolset to deploy and monitor Solana and Ethereum nodes with integrated alerting and service management.
- Supported integration with AWS EC2 and GCP VM orchestration via Terraform and systemd units for auto-restart.

DeFi Market Data Aggregator

- Built a real-time backend in Rust to scrape and aggregate price feeds from multiple exchanges and deliver signed data to smart contracts.
- Supported serialization in JSON, Protobuf, and RLP for cross-protocol compatibility.

Secure Wallet Audit Tool

- Contributed to the development of a backend audit tool to validate on-chain wallet activity against predefined behavioral policies for fintech use cases.
