

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Backend Engineer with 10+ years of hands-on experience designing, developing, and scaling distributed systems across SaaS, cloud-native, and high-traffic environments. Skilled in building fault-tolerant backend services, designing data-intensive workflows, and implementing event-driven architectures with Kafka and RabbitMQ. Adept in Scala, .NET, and Java, with deep expertise in AWS, GCP, SQL, and NoSQL ecosystems. Strong track record of mentoring engineers, driving architectural decisions, and improving performance and maintainability of mission-critical applications.

TECHNICAL SKILLS

- **Languages:** Scala, Java, C#, Python, TypeScript, JavaScript, SQL, NoSQL
- **Backend:** .NET Core, Node.js, REST APIs, Microservices, Event-Driven Architecture
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, SingleStore, DynamoDB
- **Messaging & Streaming:** Kafka, RabbitMQ
- **Cloud & DevOps:** AWS (Lambda, ECS, EC2, API Gateway, S3, IAM, CloudFormation), Azure, GCP, Docker, Kubernetes, Terraform, CI/CD pipelines
- **Monitoring & Observability:** Grafana, Prometheus, Coralogix, ELK Stack
- **Practices:** Clean Architecture, TDD, Automated Testing (unit, integration, E2E), Agile/Scrum

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and built distributed microservices in Scala and .NET Core, optimizing API throughput by 40% while maintaining strict SLAs in highly transactional SaaS environments.
- Implemented event-driven messaging with Kafka and RabbitMQ, achieving resilient real-time data streaming with guaranteed delivery and fault-tolerance across services.
- Migrated legacy services into AWS cloud-native architecture leveraging ECS, Lambda, and API Gateway, significantly improving scalability, cost-efficiency, and deployment speed.
- Established automated testing strategy including unit, integration, and E2E pipelines, reducing production defects by 35% and increasing release confidence across teams.
- Championed code quality and maintainability, introducing domain-driven design and refactoring initiatives that reduced technical debt and improved onboarding for new developers.
- Mentored 6+ junior and mid-level engineers, providing hands-on technical guidance in distributed systems, CI/CD best practices, and advanced debugging techniques.

- Partnered with Product and Design teams to translate business requirements into resilient backend solutions, ensuring seamless integration and customer-focused delivery.
- Built monitoring dashboards using Grafana and Coralogix, improving incident response time by 50% and ensuring proactive resolution of performance bottlenecks.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Engineered backend APIs in C# and Scala, ensuring high availability and responsiveness while serving thousands of concurrent client requests across marketing automation platforms.
- Optimized database queries and introduced caching strategies with Redis, improving query performance by 60% and reducing infrastructure costs significantly.
- Designed REST APIs with secure authentication and authorization, implementing OAuth2 and JWT to safeguard sensitive customer and transaction data.
- Led migration of critical services from on-prem to AWS, introducing CI/CD pipelines with GitHub Actions and Terraform to ensure consistent, automated deployments.
- Actively reduced technical debt by rewriting legacy monolithic modules into decoupled microservices, lowering maintenance overhead and enabling faster feature delivery.
- Conducted extensive code reviews and peer programming sessions, raising engineering standards and fostering team-wide adoption of clean coding practices.
- Implemented advanced logging, tracing, and monitoring solutions that provided full visibility into system health and improved MTTR during outages.
- Collaborated closely with stakeholders to prioritize features and performance improvements, ensuring delivery timelines aligned with business growth objectives.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Developed scalable backend modules in Java and C#, focusing on high-availability applications serving enterprise clients in healthcare and financial sectors.
- Designed normalized SQL schemas and implemented stored procedures in PostgreSQL and MySQL, significantly enhancing reporting capabilities and query performance.
- Built asynchronous processing pipelines with RabbitMQ to handle large volumes of events reliably, reducing latency and preventing bottlenecks.
- Applied rigorous testing methodologies, implementing CI/CD practices that enabled weekly deployments with zero downtime in production environments.
- Introduced monitoring tools like Grafana and Prometheus, enabling proactive performance tuning and capacity planning across all deployed services.
- Worked with frontend teams to design API contracts and ensure seamless integration with Angular and React applications.
- Refactored critical modules to improve system security, adding data encryption in transit and at rest with AES and TLS standards.
- Played a key role in Agile sprints, contributing to backlog grooming, sprint planning, and retrospective improvements that boosted team efficiency.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Built backend integrations in C# and Java, connecting enterprise platforms with third-party APIs and ensuring secure, reliable data synchronization.
- Enhanced scalability of existing services by optimizing data processing logic, achieving improved load handling during seasonal demand spikes.
- Assisted in deployment automation by creating CI/CD workflows, reducing manual intervention and increasing developer productivity.
- Conducted detailed unit testing and contributed to QA automation frameworks, increasing release reliability and confidence.
- Participated in the design of REST API standards for multi-tenant SaaS products, enabling consistent integration across clients.
- Optimized MongoDB queries and indexes, cutting down query response times significantly and enhancing system responsiveness.
- Worked collaboratively with cross-functional teams to deliver product features under tight deadlines.
- Supported the migration of on-prem solutions to hybrid cloud environments, introducing AWS S3 storage for scalable data retention.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in backend development with C# and SQL Server, contributing to internal systems that supported enterprise data workflows.
- Designed and tested stored procedures and triggers to automate routine data operations, reducing manual workloads for business users.
- Collaborated with senior engineers to integrate APIs and ensure smooth data exchange with third-party platforms.
- Implemented early-stage monitoring scripts and automated reporting processes, improving system transparency for stakeholders.
- Built prototypes for new microservice features, helping validate architectural directions for production rollout.
- Conducted performance testing and provided optimization recommendations, learning critical concepts of distributed computing.
- Gained exposure to agile practices, actively participating in sprint planning and retrospectives.
- Contributed documentation for internal knowledge sharing and technical onboarding.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate**
 - **Google Cloud Professional Cloud Developer**
 - **Microsoft Certified: Azure Developer Associate**
-

PROJECTS

- **Scalable Event-Driven Analytics Platform** – Designed a distributed analytics system using Scala, Kafka, and MongoDB, processing millions of daily events with near real-time reporting.
- **Cloud-Native Migration** – Led migration of a legacy SaaS application into AWS ECS and Lambda, leveraging IaC with Terraform and improving deployment speed and scalability.
- **CI/CD Automation Framework** – Developed an automated pipeline with GitHub Actions and AWS CodePipeline, enabling fully automated testing, build, and deployment workflows.
