

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile and results-driven Senior Backend Engineer with over 8 years of experience designing, developing, and optimizing scalable, low-latency systems using Java, Spring Boot, and modern cloud infrastructure. Proven expertise in building distributed APIs and real-time data processing platforms. Adept at collaborating with data science teams to deploy cutting-edge algorithms, integrating RESTful APIs, and working with messaging queues, NoSQL/SQL databases, and containerized environments. Passionate about sports data systems and performance optimization for high-traffic platforms.

TECHNICAL SKILLS

- **Languages:** Java 8+, Python, JavaScript, SQL, Bash
- **Frameworks:** Spring Boot, Hibernate, JPA, Express.js
- **Databases:** PostgreSQL, MongoDB, MySQL, Redis
- **Messaging & Queues:** Apache Kafka, RabbitMQ
- **DevOps & Cloud:** Docker, Kubernetes, AWS, GitLab CI/CD, NGINX
- **Testing:** JUnit, Mockito, REST Assured, Postman
- **Others:** RESTful API design, Microservices architecture, WebSocket, OAuth2
- **Tools:** IntelliJ IDEA, Git, Jenkins, Grafana, Prometheus, ELK Stack

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led backend API development for real-time pricing platforms by implementing scalable services using Java 11+ and Spring Boot across a distributed microservices architecture.
- Reduced latency by 35% through asynchronous message handling and fine-tuned Kafka streaming pipelines handling high-frequency sports data ingestion.
- Developed internal APIs that supported high-throughput prediction models, collaborating closely with data scientists to optimize performance.
- Integrated complex business logic and external REST APIs into dynamic betting services using modular design and CI pipelines.
- Created monitoring dashboards using Prometheus and Grafana, enabling proactive detection and resolution of system anomalies.
- Conducted load testing and refactoring of memory-intensive services to improve garbage collection efficiency and uptime.

- Containerized and deployed services via Docker and Kubernetes on AWS EKS, achieving >99.9% availability.
- Actively participated in architectural decision-making, sprint planning, and team mentorship in a fast-paced Agile setup.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Engineered backend APIs for real-time ad serving and campaign analytics using Spring Boot and PostgreSQL with high-throughput endpoints.
- Integrated RESTful and third-party APIs with authentication and throttling layers, serving millions of requests daily.
- Designed and implemented async job queues using RabbitMQ to offload campaign data processing with retry mechanisms.
- Refactored legacy services into modular microservices using DDD principles, improving maintainability and scalability.
- Developed real-time dashboards with WebSocket and Redis for tracking live marketing events and KPIs.
- Implemented performance benchmarks and profiling tools to reduce processing time by over 40% in critical pipelines.
- Participated in data warehousing initiatives integrating MongoDB to enhance historical campaign data access and retrieval.
- Created automated test suites using JUnit and Mockito with >80% code coverage and zero regressions in production.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Contributed to backend development of scalable web applications in the logistics and retail sectors using Java and Spring.
- Optimized SQL queries and database indexing, improving transactional system performance under peak load.
- Developed REST APIs used in cross-platform mobile apps and coordinated with frontend engineers for seamless integration.
- Worked on a live order-tracking system with map APIs and GPS data handling with near real-time updates.
- Maintained CI/CD workflows and deployment scripts across dev, staging, and production environments.
- Collaborated with QA to create automated integration test suites and reduce bug turnaround times.
- Led API documentation efforts with Swagger/OpenAPI, improving developer onboarding speed by 60%.
- Applied Agile methodologies, including daily stand-ups, sprint retrospectives, and pair programming.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Participated in developing backend features for B2B SaaS platforms using Java and REST APIs.

- Built modules for user management, role-based authentication, and data export.
- Integrated third-party APIs for billing and usage tracking using secure tokens and callbacks.
- Worked closely with UX team to ensure alignment between backend functionality and user interfaces.
- Implemented exception handling, logging, and traceability using Logback and ELK stack.
- Assisted in maintaining CI pipelines and deploying services to test environments.
- Created migration scripts for PostgreSQL schema updates in production environments.
- Wrote unit and integration tests for service layers to ensure business logic correctness.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Developed data processing scripts and RESTful endpoints for internal analytics dashboard.
- Learned and contributed to modular Java backend codebases under senior mentorship.
- Documented internal APIs and provided technical support for frontend team integration.
- Implemented unit tests and assisted with debugging and issue tracking during deployments.
- Participated in weekly team code reviews and Agile ceremonies to understand enterprise workflows.
- Researched best practices in REST API design, latency reduction, and JSON serialization.
- Supported integration with early-stage NoSQL data stores for caching purposes.
- Contributed to refactoring efforts for improving code readability and maintainability.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Oracle Certified Professional, Java SE 11 Developer**
- ❖ **AWS Certified Developer – Associate**
- ❖ **Spring Professional Certification – Pivotal/VMware**

PROJECTS

Real-Time Athlete Pricing Engine

- Designed backend modules to calculate, cache, and expose athlete odds with millisecond-level latency.
- Integrated with third-party sports APIs and ensured failover redundancy using circuit breakers and async calls.
- Applied Kafka streaming and reactive programming to process data feeds and update pricing dynamically.

Distributed Prediction Service for Football Analytics

- Developed backend system that consumed real-time football stats, applied ML models, and exposed predictions via REST.
- Collaborated with data scientists on model performance tuning and batch data processing in parallel pipelines.

Microservices Betting Platform Migration

- Migrated monolithic betting backend into microservices deployed on Kubernetes, reducing deployment time and increasing team velocity.
- Built secure APIs with OAuth2, added request tracing with Zipkin, and enabled autoscaling based on traffic load.
