

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Senior Software Engineer with 8+ years of hands-on backend development, specializing in Golang, cloud-native architecture, and Kubernetes-based infrastructure. Proven track record of building greenfield platforms and leading high-impact engineering teams to deliver scalable DevOps tooling, distributed systems, and enterprise-grade deployment control planes. Strong background in Docker, CI/CD automation, observability tooling (Prometheus, Grafana), and cross-cloud (AWS & GCP) environments. Passionate about technical leadership, system reliability, and developer experience. Product-minded, highly autonomous, and driven by clean architecture and infrastructure innovation at scale.

TECHNICAL SKILLS

- **Languages:** Go (Golang), Python, JavaScript (Node.js), TypeScript, PHP
- **Backend:** REST APIs, gRPC, Microservices, Event-Driven Architecture, GraphQL
- **Cloud:** AWS (EC2, Lambda, S3, RDS, CloudWatch, EKS), GCP (Cloud Run, GKE)
- **Containers & Orchestration:** Docker, Kubernetes (Helm, Kustomize), Terraform
- **DevOps & CI/CD:** GitHub Actions, GitLab CI, CircleCI, ArgoCD, Prometheus, Grafana
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Elasticsearch
- **Infra & Tooling:** Kafka, RabbitMQ, NATS, Envoy, Nginx, Linux
- **Testing:** Go Test, PyTest, Postman, Cypress, JMeter
- **Other:** Git, Agile/Scrum, Jira, Confluence

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led development of a greenfield cloud-native control plane using Golang and Kubernetes to manage multi-tenant deployments across AWS and GCP clusters with complete lifecycle automation.
- Architected and implemented scalable backend systems using Go and gRPC with event-driven microservices and infrastructure-as-code principles using Terraform and Helm.
- Designed and delivered container-native CI/CD pipelines with GitHub Actions and ArgoCD, enabling zero-downtime deployment, dynamic rollbacks, and auto-scaling with HPA in Kubernetes.
- Built observability stack from scratch using Prometheus, Grafana, Loki, and OpenTelemetry to ensure proactive incident detection and root-cause diagnostics across distributed systems.

- Developed internal tooling and CLIs for DevOps teams to streamline cloud infrastructure setup, reducing manual ops tasks by 80% and accelerating onboarding time.
- Drove production-ready infrastructure with Kubernetes and Docker, leading service mesh integration and multi-region deployments via EKS and GKE.
- Mentored and led a team of backend engineers, conducting technical interviews, code reviews, and knowledge-sharing sessions on Go concurrency, system design, and infrastructure patterns.
- Partnered closely with product and platform teams to define API contracts, integration workflows, and SLAs for mission-critical enterprise features.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed modular backend platforms in Go and Node.js to support B2B cloud integrations, including marketing automation systems and CRM sync pipelines over RESTful and GraphQL APIs.
- Containerized all backend services and managed deployments with Docker Compose and Helm in Kubernetes environments on both AWS and private cloud platforms.
- Built high-availability data processing pipelines for ingesting and normalizing millions of marketing events daily using Kafka, Redis, and PostgreSQL.
- Maintained and scaled observability infrastructure using Prometheus exporters, Elasticsearch, and alerting via Alertmanager and PagerDuty.
- Designed RBAC and token-based authentication modules to secure API endpoints, following OAuth2 and JWT-based practices across distributed microservices.
- Migrated legacy monolith into a distributed architecture using domain-driven design and microservice boundaries defined by business capabilities.
- Introduced a test automation suite for APIs using Go Test and Postman with contract validation and load testing with JMeter.
- Actively contributed to DevOps lifecycle, including writing Terraform modules for AWS IAM, EC2, S3, CloudWatch, and RDS provisioning.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Created enterprise SaaS backend services with Go, Python, and MySQL, supporting logistics and inventory management platforms with real-time tracking and notifications.
- Designed modular APIs and backend logic for scheduling systems using cron jobs and queues (RabbitMQ) for task orchestration and failure handling.
- Delivered Docker-based deployment strategy for internal services and CI pipelines using GitLab CI and Kubernetes namespaces for per-client environments.
- Integrated third-party services (Stripe, Twilio, Firebase) and custom-built SDKs for system communication over HTTP and WebSockets.
- Refactored large legacy modules into Go-based microservices, improving reliability, deployment speed, and error observability.
- Participated in agile ceremonies, contributing to sprint planning, grooming, retrospectives, and release documentation with Confluence.
- Built NoSQL data indexing engine with MongoDB and Elasticsearch to support advanced query patterns and reporting dashboards.
- Created internal admin and analytics portals using React and integrated backend APIs with WebSocket streaming for real-time updates.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Assisted in refactoring and testing backend APIs for an e-commerce platform written in PHP and Go, focused on product catalog search and filtering logic.
- Wrote automated tests for backend endpoints and contributed to improving integration coverage using Postman and PHP Unit.
- Participated in Kubernetes migration initiatives by containerizing services and integrating monitoring via Prometheus.
- Designed and integrated user audit trail features with database triggers and async logging pipelines using Redis and RabbitMQ.
- Improved backend response times by rewriting blocking DB calls with asynchronous handlers using Go's concurrency model.
- Supported API versioning and backwards compatibility efforts during a platform refactor into REST and gRPC services.
- Investigated and patched performance bottlenecks in DB query planning and ORM usage across large data joins.
- Contributed to build pipeline enhancements with custom Docker images and CI configuration refactors.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Supported the engineering team in writing backend scripts for system monitoring and log aggregation with Bash and Python.
- Built small admin panel tools using PHP and MySQL for internal use by the QA and ops teams to monitor deployments.
- Implemented basic container setups with Docker for local development of web modules and sandbox testing environments.
- Participated in writing technical documentation and software diagrams for infrastructure setups and deployment runbooks.
- Developed and maintained internal dashboards to visualize system status and uptime via REST APIs.
- Supported codebase migration from SVN to Git, and helped structure repositories for modular development.
- Wrote automation scripts to clean up old log files and manage disk quotas across Linux servers.
- Shadowed senior engineers during incident response and participated in retrospectives and follow-up documentation.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- **Cloud Control Plane for SaaS Deployments**
Built a distributed control plane in Golang with Kubernetes CRDs and operators to manage tenant isolation, observability, and deployments across AWS and GCP.
 - **DevOps Tooling CLI for Microservices**
Developed a Go-based CLI to scaffold and bootstrap microservices, automate CI/CD setup, and integrate with Prometheus, Grafana, and logging stacks.
 - **Realtime Monitoring Dashboard**
Engineered a dashboard using Go, WebSockets, and PostgreSQL to stream health checks and logs in real-time for microservices deployed via Kubernetes.
-

PROJECTS

- **AWS Certified Solutions Architect – Associate**, Amazon Web Services
- **Certified Kubernetes Administrator (CKA)**, CNCF
- **Go for Network Operations**, Udemy
- **Cloud Native Go with Kubernetes**, Pluralsight
