

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and solution-oriented Senior Software Engineer with 9+ years of experience specializing in scalable backend systems, TypeScript/NestJS ecosystems, and AI integration using LangChain and Azure AI. Adept at leading engineering teams, designing modular architectures, and delivering secure multi-tenant APIs. Passionate about building AI-native platforms and driving real impact through advanced engineering practices and mentorship.

TECHNICAL SKILLS

- **Languages & Frameworks:** TypeScript, JavaScript, Node.js, NestJS, Express.js, Python
- **AI & LLMs:** LangChain, LangGraph, Prompt Engineering, OpenAI, Azure AI Services
- **Cloud & DevOps:** Azure (Event Hub, Key Vault, Blob Storage, Container Apps), AWS, GCP, Docker, GitHub Actions, CI/CD, Terraform
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, TypeORM, Prisma
- **Security & Access:** OAuth2, JWT, RBAC, Multi-Tenant APIs, Secure API Design
- **Tools & Infrastructure:** Git, Jira, Jenkins, SonarQube, Prometheus, Grafana
- **Testing & Quality:** Jest, Mocha, Chai, Cypress, Postman, Swagger
- **Others:** RESTful APIs, WebSockets, Microservices, Serverless, Event-Driven Architecture

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led backend architecture and feature development using NestJS and TypeScript, focusing on modular monorepos and microservices for enterprise platforms.
- Designed and integrated LangChain-based AI modules into client-facing applications, enabling real-time context-aware decision making for fintech and legal tech solutions.
- Built secure RESTful and event-driven APIs using PostgreSQL, Redis, and TypeORM with Azure Event Hub for asynchronous communication.
- Architected AI-enabled document summarization and chat modules using OpenAI and LangChain orchestration on Azure AI Services.
- Enforced secure access patterns using RBAC, multi-tenant designs, and encrypted secrets via Azure Key Vault across distributed services.

- Managed CI/CD pipelines via GitHub Actions and Docker containers deployed on Azure Container Apps for scalable zero-downtime deployments.
- Mentored and guided junior engineers in code reviews, architecture patterns, and AI development standards, increasing team velocity by 40%.
- Led observability enhancements using Prometheus, Grafana, and structured logging for 24/7 backend system health monitoring.
- Collaborated directly with product managers and client stakeholders, translating high-level workflows into actionable technical roadmaps.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed marketing automation APIs and analytics dashboards using NestJS and Express.js, integrating with CRM and external BI tools.
- Engineered multichannel customer engagement platform integrating SMS, email, and push notifications with real-time tracking via WebSockets.
- Contributed to modular backend structure with PostgreSQL and Redis, optimizing queries for customer segmentation and analytics throughput.
- Built internal tools to process campaign performance data via scheduled background workers using Bull and NestJS.
- Integrated Azure services including Blob Storage and Key Vault for media asset management and secure credentials handling.
- Implemented JWT-based authentication with granular permission layers for campaign and customer-level access separation.
- Designed and maintained CI/CD pipelines on GitLab CI with Docker-based staging and production environments.
- Supported marketing analysts and data engineers with self-service analytics APIs and guided them on API consumption best practices.
- Participated in system refactoring toward a service-oriented architecture, improving test coverage and deployment frequency.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built B2B SaaS platform backend in Node.js and TypeScript, enabling real-time quote and invoice generation for logistics companies.
- Developed modular REST APIs with full test coverage and integrated Swagger for documentation and client consumption.
- Created scheduled batch jobs with Node workers and PostgreSQL, handling large volumes of transactional data and billing processes.
- Integrated third-party authentication services with OAuth2 and JWT tokens for secure login across web and mobile platforms.
- Migrated on-premise deployments to cloud-based Kubernetes clusters (Azure AKS), reducing infrastructure downtime by 50%.
- Conducted technical workshops for engineering team on TypeScript advanced patterns, increasing adoption by 90% across codebase.
- Led internal innovation project using early GPT-2 models for invoice auto-tagging and document classification as PoC for LLMs.

- Designed database schema with PostgreSQL, ensuring normalization and optimal indexing for search-heavy operations.
- Collaborated cross-functionally with QA, design, and customer success to iteratively improve platform usability and reliability.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Built APIs and backend systems for e-commerce integrations using Express.js and MySQL.
- Designed customer order processing workflows integrating multiple logistics providers via custom APIs.
- Wrote unit and integration tests using Mocha and Chai, reducing post-release bugs by 35%.
- Assisted DevOps team in transitioning deployment flow to Docker containers hosted on DigitalOcean.
- Developed multi-tenant admin dashboard for customer management using RBAC and role isolation.
- Integrated analytics SDKs for session and conversion tracking in client storefronts.
- Supported project handoffs to client teams by writing developer onboarding and deployment guides.
- Participated in sprint planning and retrospectives, providing technical feasibility inputs to business requests.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted senior engineers with development of internal CRM backend using PHP and MySQL.
- Built UI components in JavaScript and jQuery for customer data management.
- Wrote SQL queries and optimized slow-performing reports used in client dashboards.
- Automated daily report generation with scheduled shell scripts and cron jobs.
- Collaborated with QA to test CRM features and validate bug reports using Jira and manual testing.
- Gained experience in Git workflows, including branching, merging, and PR reviews.
- Contributed to documentation for user-facing workflows and onboarding steps.
- Participated in internal code quality review meetings and learned foundational engineering principles.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Azure AI Engineer Associate – Microsoft Certified**
- ❖ **LangChain Advanced Developer Certification**
- ❖ **NestJS Pro Course – CodeWithNazar**

- ❖ **Docker & Kubernetes: The Complete Guide** – Udemy
 - ❖ **PostgreSQL for Developers** – DataCamp
-

PROJECTS

- ✓ **AI Advisor Engine** – *LangChain, NestJS, PostgreSQL, Azure AI*
Built a scalable LangChain-based AI engine to automate financial advisory workflows. Integrated GPT-based agents for answering regulatory questions, generating investment summaries, and surfacing portfolio risks. Used Azure Container Apps and Blob Storage to run background analysis jobs and serve user-facing insights.
- ✓ **Modular LLM Platform** – *LangGraph, NestJS, Redis, Azure Key Vault*
Led a multi-tenant backend system to allow clients to create and orchestrate AI workflows using a visual LangGraph designer. Secured LLM token usage, injected prompt engineering controls, and used Event Hub to monitor async flows. Integrated CI/CD with GitHub Actions and Docker-based deployment pipelines.
