

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Backend Engineer with 9+ years of experience architecting scalable, event-driven backend systems using TypeScript, Python, and cloud-native infrastructure. Specialized in building microservices with Kubernetes, designing resilient and high-availability systems, and driving backend innovation in agile cross-functional teams. Strong command of SQL/NoSQL databases, DevOps practices, and CI/CD automation in cloud environments like AWS and GCP. Adept at optimizing performance, leading backend initiatives, and contributing to gaming and digital product ecosystems.

TECHNICAL SKILLS

- **Languages:** TypeScript, Python, Go (intermediate), SQL, JavaScript
- **Frameworks:** Express.js, FastAPI, NestJS
- **Microservices:** Kubernetes, Docker, gRPC, REST APIs
- **Databases:** PostgreSQL, MongoDB, Redis, MySQL, DynamoDB
- **Architecture:** Event-driven, distributed systems, serverless (Lambda)
- **Cloud & DevOps:** AWS (EC2, SQS, Lambda, ECS), GCP, Terraform, GitHub Actions, Helm
- **Tools:** Prometheus, Grafana, Datadog, Git, Jira, Agile, WebSockets, RabbitMQ

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Engineered multiple cloud-native microservices using NestJS and PostgreSQL deployed via Kubernetes, supporting real-time analytics for healthcare platforms under stringent SLA constraints.
- Integrated RabbitMQ and Redis streams to build reactive, fault-tolerant communication pipelines across distributed modules, enhancing latency by 38%.
- Built event-driven architecture to decouple services, achieving complete modularity and reducing inter-service dependencies by 55%.
- Designed, implemented, and maintained CI/CD workflows with GitHub Actions and Docker containers deployed across AWS and GCP environments.
- Re-architected legacy monolith components into microservices, streamlining deployment times and cutting operational downtime by 70%.
- Conducted code reviews, enforced test-driven development (TDD) standards, and improved overall test coverage across the backend codebase by 45%.

- Applied serverless design principles using AWS Lambda and GCP Cloud Functions for cost-effective and scalable background job execution.
- Implemented access control, identity federation, and token-based authentication using OAuth2 and AWS Cognito to secure public APIs.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed backend services in TypeScript with Express.js and PostgreSQL to support cross-platform marketing automation tools used by 250+ clients.
- Optimized queries and indexes across NoSQL (MongoDB) and SQL (PostgreSQL) databases, reducing average read latency from 200ms to 45ms.
- Designed RESTful APIs with OpenAPI standards for seamless integration with mobile apps, third-party analytics, and client-facing dashboards.
- Maintained real-time communication channels using WebSockets for campaign delivery, achieving stable multi-client connections in load tests.
- Deployed infrastructure across AWS using Terraform with CI pipelines ensuring zero-downtime blue/green deployments.
- Containerized services with Docker and Helm, orchestrated deployments via Kubernetes clusters hosted on Azure.
- Led incident response and debugging for production issues, identifying and fixing SLA-critical bugs in under 30 minutes.
- Mentored junior developers, fostering a collaborative coding environment through pair programming and daily code reviews.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built scalable backend services in Node.js and Python, supporting high-throughput client requests on travel booking platforms.
- Designed and normalized relational database schemas in MySQL for optimized query execution and consistent data integrity across modules.
- Developed backend dashboards with role-based access control, logging, and metric tracking using Prometheus and Grafana integrations.
- Migrated critical systems from on-premise to GCP infrastructure, achieving 99.98% uptime SLA over 12 months.
- Implemented secure messaging queues using Kafka and applied stream processing for aggregating analytical events.
- Participated in architectural planning, proposing containerized solutions with Kubernetes, enhancing maintainability and scaling potential.
- Ensured secure backend practices including encrypted storage, CSRF protection, and security headers in all deployed APIs.
- Delivered API documentation and SDKs for internal and external developers, boosting integration speed and adoption.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Contributed to backend development in Python for e-commerce solutions supporting dynamic product catalogs and real-time price tracking.
- Assisted in implementing asynchronous job queues using Celery and Redis for high-priority order processing and alert notifications.
- Maintained and improved database performance through profiling and optimization of PostgreSQL indexes and slow queries.
- Supported migration of legacy Python2 codebase to Python3, ensuring compatibility across modules with comprehensive regression testing.
- Implemented test harnesses and integration test suites using PyTest, increasing deployment confidence and reducing regressions.
- Collaborated cross-functionally with frontend developers to finalize backend API designs and response contracts.
- Developed features in a fast-paced agile environment, consistently delivering bi-weekly sprint goals.
- Participated in code review cycles and knowledge-sharing sessions to improve team alignment and engineering excellence.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in backend development using PHP and JavaScript, building internal tooling and administrative dashboards.
- Integrated MySQL databases with legacy PHP systems, providing filtered data reports used by support and sales teams.
- Developed internal APIs consumed by mobile apps, improving feature development velocity and ensuring data consistency.
- Wrote batch scripts and utilities for periodic data cleaning, validation, and automated testing pipelines.
- Performed manual testing and wrote automated test scripts to verify functional requirements and regression scenarios.
- Participated in daily standups and sprint planning as part of agile team to understand real-world development cycles.
- Improved logging and monitoring of services using custom logging frameworks and early-stage ELK stack integration.
- Researched best practices for REST API design and applied them under senior guidance for early-stage production systems.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Solutions Architect – Associate (2023)
- ❖ Kubernetes for Developers by Udacity (2022)

PROJECTS

- ✓ **Aurory Fan Marketplace (Personal Hack Project)**
Built a TypeScript-based backend with Node.js and PostgreSQL simulating a collectibles marketplace inspired by Aurory's ecosystem. Integrated WebSockets for live auction updates and used Redis for high-speed in-memory caching.
- ✓ **Multiplayer Battle Arena Engine (Gaming Prototype)**
Engineered core backend engine for a real-time multiplayer game prototype using Python and FastAPI, featuring match synchronization, leaderboards, and event queue processing.
