

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 9+ years of experience delivering enterprise-grade cloud-native platforms, distributed microservices, and large-scale SaaS solutions. Proven expertise in AWS, GCP, Docker, SQL, and NoSQL systems, with strong contributions to application scalability, security, and cross-functional delivery. Adept in full-stack and backend development, event-driven systems, and DevOps automation while driving performance, reliability, and innovation.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, PHP, Go, Ruby
- **Frameworks:** Vue.js, React, Next.js, Node.js, NestJS, Django, Flask, Laravel, Symfony, Ruby on Rails
- **Cloud:** AWS (EC2, S3, RDS, Lambda), GCP (GKE, Cloud SQL, Pub/Sub), Azure (basic)
- **Databases:** SQL (PostgreSQL, MySQL, MS SQL), NoSQL (MongoDB, DynamoDB, Redis, Cassandra)
- **DevOps:** Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, CI/CD pipelines
- **Messaging/Event:** Kafka, RabbitMQ, NATS, Pub/Sub

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and delivered AWS and GCP hybrid infrastructures leveraging Docker and Kubernetes for containerized microservices, ensuring platform scalability, security, and cost optimization.
- Implemented full-stack solutions with Node.js, Vue.js, and Python, integrating SQL and NoSQL databases to support high-performance data-driven applications serving millions of records.
- Optimized database query performance by designing hybrid SQL + NoSQL models, reducing latency for mission-critical applications and scaling to multi-tenant SaaS systems with millions of users.
- Built event-driven architectures with Kafka, RabbitMQ, and NATS, enabling real-time analytics pipelines with high reliability and low-latency messaging capabilities across distributed platforms.
- Spearheaded CI/CD pipeline automation using GitHub Actions and Jenkins with Dockerized testing environments, accelerating deployments and improving overall system reliability.
- Migrated monolithic applications into microservices on AWS EKS and GCP GKE, reducing system downtime, increasing deployment velocity, and improving horizontal scalability.

- Collaborated with distributed engineering teams across Europe and the US, mentoring junior engineers and leading code reviews to enforce clean code practices and cloud-native standards.
- Partnered with product stakeholders to integrate AI-driven features, embedding machine learning models into AWS- and GCP-hosted services to enable predictive analytics at scale.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed scalable SPA platforms with Vue.js, integrating AWS- and GCP-hosted APIs and containerized services in Docker to ensure performance and reliability at enterprise scale.
- Built real-time APIs in Node.js and Python, connected with SQL and NoSQL databases, delivering robust solutions for high-throughput marketing and analytics platforms.
- Orchestrated Kubernetes deployments across AWS EKS clusters, ensuring resource optimization and automated recovery from system-level failures to meet strict SLA requirements.
- Implemented event pipelines using Kafka and GCP Pub/Sub, enabling low-latency data streaming and processing for millions of data points per day.
- Improved cross-platform performance and responsiveness by profiling SQL queries, designing caching layers with Redis and MongoDB, and introducing database sharding where needed.
- Automated infrastructure provisioning with Terraform and AWS CloudFormation, minimizing manual intervention and enabling repeatable, consistent multi-region deployments.
- Partnered with UX designers to build intuitive Vue.js dashboards with SQL-driven insights, ensuring data visualization at scale for executive-level decision-making.
- Collaborated in Agile sprints with globally distributed teams, providing technical leadership on Docker-based deployment pipelines and cloud-native best practices.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Delivered multi-tenant SaaS platforms deployed to AWS and GCP, leveraging Dockerized microservices and SQL/NoSQL databases to scale applications across global customers.
- Implemented backend services with PHP, Python, and Node.js, ensuring high performance with hybrid SQL and NoSQL data models designed for scalability and reliability.
- Enhanced query performance with distributed caching solutions such as Redis and Memcached, significantly reducing system response times across critical applications.
- Introduced WebSockets and Kafka for real-time data synchronization, improving collaboration features and enabling event-driven services across large user bases.
- Automated CI/CD pipelines using Jenkins and Docker, integrating testing frameworks and monitoring tools to maintain continuous delivery reliability and consistency.
- Built and deployed monitoring systems with AWS CloudWatch and GCP Stackdriver, enabling proactive issue detection and response for business-critical services.
- Improved application resilience by adding microservice failover strategies, retry mechanisms, and distributed logging with Elasticsearch and Kibana.
- Conducted technical workshops with stakeholders to align business requirements with cloud-native architecture and deliver on-time, high-impact SaaS solutions.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Built e-commerce applications hosted on AWS and deployed in Docker containers with SQL-based backends, ensuring stability and consistency under peak loads.
- Enhanced checkout flows and catalogs using Symfony and PHP, integrating external APIs and SQL/NoSQL systems for dynamic data storage and retrieval.
- Migrated monolithic applications into modular microservices, improving maintainability, scalability, and release frequency across distributed systems.
- Integrated NoSQL layers with MongoDB for product catalogs, optimizing indexing and performance for complex queries across thousands of SKUs.
- Collaborated with front-end teams to deliver Vue.js and Angular components, ensuring responsiveness and seamless cross-platform performance.
- Implemented automated test pipelines in Docker, raising release confidence by increasing unit and integration test coverage across applications.
- Reduced cloud infrastructure costs by restructuring AWS RDS and S3 usage, resulting in optimized database access and more efficient storage patterns.
- Contributed to Agile processes by providing technical input on backlog refinement, sprint planning, and stakeholder reviews to ensure smooth delivery cycles.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in developing web applications deployed on AWS and GCP using Dockerized development environments with SQL/NoSQL data layers for testing.
- Supported the design of API endpoints in PHP and JavaScript, optimizing SQL schemas and queries to improve system performance for small-scale projects.
- Enhanced UX by integrating responsive design principles and modern JavaScript frameworks into existing applications for cross-device compatibility.
- Participated in database optimizations by indexing queries in SQL and implementing NoSQL stores for unstructured datasets across prototype applications.
- Deployed test systems on AWS EC2 and GCP Compute Engine, gaining hands-on experience with multi-cloud infrastructures and containerization workflows.
- Documented test cases and assisted in functional testing, providing quality assurance and improving release cycle reliability for production builds.
- Collaborated with DevOps engineers to write Terraform scripts and Dockerfiles for environment provisioning and deployment automation.
- Participated in code reviews and mentorship sessions with senior developers, learning best practices in cloud-native system architecture and software delivery.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
 - Google Cloud Professional Architect
 - Docker Certified Associate
-

PROJECTS

- **Multi-Tenant Event Feed:** Built a FastAPI + Vue.js system with real-time feeds deployed on AWS/GCP, serving multi-tenant SaaS customers at scale.
- **AI-Powered Checkout Flow:** Developed a Dockerized microservice architecture enabling AI-based product recommendations in enterprise e-commerce.
- **Fraud Risk Scoring Service:** Created a Go/Python microservice with Kafka and NoSQL databases for real-time fraud detection in fintech.
- **IoT Monitoring Dashboard:** Delivered a cloud-native Python/React dashboard for IoT devices, integrated with AWS IoT Core and GCP Pub/Sub.
