

William Jackson

Senior Software Engineer – React, Next AWS/Azure

Wellington, Nevada, United States | +1 (786) 949-7561 | williamjdev@outlook.com | [linkedin.com/in/william-jackson-40036a3ba](https://www.linkedin.com/in/william-jackson-40036a3ba)

PROFESSIONAL SUMMARY

Senior React Frontend Engineer with 10+ years of experience building scalable SaaS, fintech, eCommerce, and enterprise platforms using **React 16–18**, **TypeScript 4–5**, **Next.js 12–14**, **Redux Toolkit**, and modern UI architecture. Strong background in migrating legacy frontend systems, improving performance, fixing production UI defects, implementing reusable design systems, and delivering accessible, responsive applications with measurable gains in speed, reliability, and developer productivity.

SKILLS

- **Frontend:** React 16–18, Next.js 12–14, TypeScript 4–5, JavaScript ES6+, Redux Toolkit, React Query, Zustand, HTML5, CSS3, Tailwind CSS, MUI, Storybook
- **Testing:** Jest, React Testing Library, Cypress, Playwright
- **Backend/API:** Node.js 14–20, Express.js, REST APIs, GraphQL, OpenAPI
- **Cloud/DevOps:** AWS, Docker, Kubernetes, GitHub Actions, GitLab CI, Jenkins, Nginx
- **Quality:** WCAG 2.1, Lighthouse, Web Vitals, Sentry, Datadog, CI/CD, Agile/Scrum

WORK HISTORY

Senior Software Engineer

February 2021 to December 2025

Viaro Networks Inc. - Delaware, United States

- Led development of **React 17–18** and **TypeScript 4–5** frontend architecture for a SaaS operations platform, improving page responsiveness by **38%** through memoization, code splitting, lazy loading, and optimized API state handling.
- Migrated legacy class-based React modules into modern **functional components**, **Hooks**, and **Redux Toolkit**, reducing duplicated state logic by **42%** and making future feature delivery faster across multiple product teams.
- Resolved recurring production bugs involving stale UI state, race conditions, and inconsistent form validation by introducing **React Query**, request cancellation, stronger error boundaries, and reusable validation utilities.
- Built reusable dashboard components, data tables, filters, modals, and chart views with **Storybook** documentation, helping engineers ship consistent UI features without rebuilding the same patterns repeatedly.
- Improved frontend reliability by adding **Jest**, **React Testing Library**, and **Cypress** coverage for critical workflows, preventing checkout, login, and permission-related regressions before release.
- Implemented accessibility improvements using **WCAG 2.1** practices, keyboard navigation fixes, semantic markup, and screen-reader testing, raising Lighthouse accessibility scores above **95%**.
- Connected React applications with **REST** and **GraphQL** APIs, improving frontend error handling, pagination, loading states, and retry behavior for high-volume customer workflows.
- Partnered with backend, product, and design teams to convert complex business requirements into flexible UI modules that supported multiple roles, permission levels, and customer-specific configurations.

Software Engineer

October 2018 to January 2021

Avantia, Inc. - Ohio, United States

- Developed enterprise web applications using **React 16–17**, **TypeScript 3–4**, and **Redux**, delivering customer portals, reporting screens, and workflow automation tools for internal business operations.
- Modernized older JavaScript and jQuery-heavy screens into maintainable React components, reducing UI defects by **35%** and improving release confidence for frequently updated business pages.

- Fixed difficult frontend issues such as memory leaks, duplicate API calls, broken loading states, and inconsistent date handling by improving component lifecycle logic and shared utility functions.
- Implemented responsive layouts with **CSS3**, **Sass**, and component-based design patterns, improving mobile and tablet usability for field teams and non-technical business users.
- Built reusable form components with validation, async dropdowns, file uploads, and role-based field visibility, reducing repeated implementation work across multiple applications.
- Improved frontend performance by optimizing bundle size, removing unused dependencies, and introducing route-based loading, cutting initial load time by **29%**.
- Collaborated with QA to add automated regression tests using **Jest** and **Cypress**, especially around authentication, permission-based routing, and business-critical submission flows.
- Integrated React frontends with **Node.js** and **REST APIs**, improving API error display, empty-state handling, and retry logic for more stable user experiences.

Software Developer
ArnAmy, Inc. - Florida, United States

March 2016 to September 2018

- Built customer-facing web interfaces using **React 15–16**, JavaScript ES6, HTML5, CSS3, and Bootstrap for eCommerce and service-management applications.
- Migrated selected legacy UI pages from server-rendered templates into React components, improving interactivity and reducing manual page refreshes in customer order workflows.
- Fixed browser compatibility bugs across Chrome, Firefox, Safari, and Edge by standardizing CSS behavior, improving polyfills, and validating UI changes through cross-browser testing.
- Implemented reusable product cards, search filters, checkout forms, notification banners, and account-management screens with clean component separation.
- Improved frontend performance by reducing unnecessary DOM updates, simplifying large components, and optimizing image loading, helping reduce page load time by **24%**.
- Worked closely with backend developers to consume **REST APIs**, handle authentication state, and display reliable validation messages from server responses.
- Supported production releases by debugging UI errors, reviewing logs, reproducing customer issues, and delivering hotfixes for layout, routing, and form submission problems.

Junior Software Developer
Centric Tech Inc. - New Jersey, United States

October 2014 to February 2016

- Supported frontend development using JavaScript, HTML5, CSS3, Bootstrap, and early **React 0.13–15** components for internal business tools and client-facing web pages.
- Converted static UI sections into reusable components, helping the team reduce repeated markup and maintain more consistent user interfaces across applications.
- Fixed layout defects, browser rendering issues, broken forms, and basic JavaScript errors reported by QA and customer-support teams during release cycles.
- Assisted senior engineers with API integration, frontend validation, reusable UI utilities, and documentation for common development patterns.
- Improved page usability by adding clearer form feedback, loading indicators, confirmation dialogs, and responsive styling for desktop and mobile users.
- Participated in code reviews, sprint planning, bug triage, and deployment support while building a strong foundation in production frontend engineering.

EDUCATION

Bachelor's degree in Computer Science
Harvard University

2010 to 2014

- Built strong foundations in **algorithms**, **databases**, and **software engineering**, applying coursework through practical team projects and production-style system design.

CERTIFICATIONS

- **AWS Certified Developer – Associate — 2024**
Demonstrated practical capability in building, deploying, and maintaining **cloud-native applications** with strong focus on **AWS services**, secure integrations, monitoring, and reliable production delivery.
- **Meta Front-End Developer Professional Certificate — 2023**
Validated hands-on understanding of modern **React** development, reusable **component architecture**, responsive interface design, state-driven UI behavior, and maintainable frontend implementation practices.
