

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-330682401/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Python Developer with over 8 years in software engineering, specializing in cloud-native system design, serverless architectures, and large-scale data integrations. Proven success in modernizing legacy systems using AWS services, Infrastructure as Code, and scalable event-driven designs. Seeking to contribute to impactful digital transformation initiatives in a remote-first engineering environment.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, SQL, Bash
- **Cloud Platforms:** AWS (Lambda, SQS, ECS, DynamoDB, API Gateway, CloudWatch)
- **IaC Tools:** Terraform, AWS CDK, CloudFormation
- **Integration:** REST APIs, Event-Driven Architecture, Legacy RDBMS (Oracle, SQL Server)
- **DevOps:** Docker, GitHub Actions, AWS CodePipeline, CI/CD automation
- **Data:** PostgreSQL, MySQL, Oracle, DynamoDB
- **Tools:** Git, JIRA, Postman, VS Code, PyCharm
- **Architectures:** Microservices, Serverless, Cloud-Native Design

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2025

Timișoara, Romania (Remote)

- Led cloud migration of monolithic applications by designing event-driven Python microservices using AWS Lambda, SQS, ECS, and API Gateway for optimal scalability and resilience.
- Engineered infrastructure automation scripts in Terraform and CDK, standardizing environments across development and production pipelines.
- Replaced legacy integration layers with Python-based connectors interfacing Oracle and SQL Server via REST APIs and asynchronous messaging.
- Built fault-tolerant service orchestration logic with retry and rollback mechanisms using AWS Step Functions and CloudWatch alarms.
- Developed CI/CD pipelines using GitHub Actions for deploying Lambda functions and IaC stacks across isolated environments.
- Mentored 5 engineers in best practices for IaC and AWS microservices, significantly reducing deployment errors and onboarding time.

- Collaborated closely with business analysts to gather requirements and designed robust service interfaces for external system integrations.
- Integrated legacy customer systems with AWS-native solutions ensuring data integrity and traceability across heterogeneous systems.
- Introduced observability with structured logging and custom metrics across all Lambda functions, reducing MTTR by 40%.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Implemented backend Python APIs for marketing platforms, enabling integration with CRM systems and analytics dashboards.
- Migrated data ingestion pipelines from on-premise scripts to AWS Lambda and S3 triggers, improving performance and reliability.
- Introduced automated deployment of environments via CloudFormation and IAM-managed roles, enhancing team agility and security.
- Re-architected synchronous APIs into asynchronous event-driven services using SQS and SNS for campaign execution workflows.
- Refactored legacy codebase for scalability and maintainability, incorporating design patterns and modular practices.
- Collaborated with UI/UX and DevOps teams to align API development with infrastructure provisioning and monitoring pipelines.
- Integrated 3rd-party tools for email and SMS delivery, ensuring consistent data flow between transactional systems and user platforms.
- Built test coverage with PyTest for all new backend modules, boosting code confidence and deployment safety.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Contributed to the development of a logistics platform by creating RESTful APIs using Flask and integrating them with Oracle DB.
- Supported migration of monolithic application logic into a modular Python-based architecture for maintainability.
- Introduced job queuing with Celery and RabbitMQ to offload time-intensive processes and improve UI responsiveness.
- Wrote database migration scripts using Alembic to ensure version control over schema changes in multi-tenant environments.
- Developed middleware that translated legacy SOAP calls into modern REST APIs as part of modernization strategy.
- Designed caching strategies using Redis to improve performance of high-frequency endpoints by 60%.
- Deployed applications via Docker Compose to streamline multi-service development environments.
- Conducted security audits on endpoints, enforcing role-based access and encryption at rest.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Maintained and enhanced Python services for an e-commerce backend, integrating payment providers and inventory services.
- Collaborated with frontend teams to expose performant, well-documented APIs for Angular-based UIs.
- Migrated legacy reports to Python-based ETL workflows, improving generation time and reducing server load.
- Implemented token-based authentication and session control using JWTs for internal tooling.
- Participated in Agile sprints and contributed to planning and testing using Jira and Selenium-based test suites.
- Built internal tooling to monitor API uptime and latency, triggering alerts for anomalies.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Developed RESTful endpoints using Flask for a startup product MVP, focusing on scalability and modularity.
- Integrated MySQL with ORM logic for CRUD operations and user registration flows.
- Deployed prototypes on AWS EC2 instances with basic IAM access control and Nginx routing.
- Wrote unit tests with unittest framework, improving confidence in release cycles.
- Documented project setup instructions and deployment procedures to enable faster onboarding of future interns.
- Supported migration of Excel-based business processes to web applications, increasing automation.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **AWS Certified Developer – Associate**
 - ❖ **AWS Certified Solutions Architect – Associate**
 - ❖ **Terraform for DevOps Engineers – HashiCorp Certified**
 - ❖ **Python for Cloud Engineers – Udemy Pro Pathway**
-

PROJECTS

Cloud-Native Integration Platform Migration – Sensidev (2023)

- Migrated a legacy monolithic platform to AWS, building scalable Python-based services that leveraged Lambda, ECS, and DynamoDB.
- Designed and implemented IaC using Terraform and CDK to enable consistent and auditable infrastructure deployment.
- Integrated SQS-based queues for decoupled service communication, adding resiliency and scalability.

Event-Driven Marketing Campaign Engine – Syscom Digital (2020)

- Architected a fully event-driven system to manage user-triggered campaigns, utilizing AWS SNS, SQS, and Lambda.
- Built monitoring and alerting systems using CloudWatch and integrated them into Slack channels for incident response.

Legacy API Modernization – Soft Build (2018)

- Rewrote legacy SOAP services into REST APIs using Flask, optimizing for low-latency and backward compatibility.
- Coordinated with external vendors to ensure data contracts and authentication layers met compliance standards.
