

CRISTOFF STAN

Senior iOS Engineer – Swift, Objective-C, Mobile Architecture

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior iOS Engineer with 10+ years delivering consumer, B2B SaaS, e-commerce, and field-service applications using **Swift 5.3–6.0, Objective-C, iOS 14–18, UIKit, SwiftUI, Combine, Core Data, and Firebase**; combines mobile architecture, legacy modernization, offline-first design, secure API integration, performance tuning, CI/CD, and technical leadership to build reliable apps that improve engagement, operational speed, release quality, and long-term maintainability.

TECHNICAL SKILLS

- **iOS Development:** Swift 5.x–6.0, Objective-C, iOS SDK, UIKit, SwiftUI, Foundation, Xcode, Interface Builder, Auto Layout, Size Classes, accessibility, localization, adaptive layouts, widgets, App Clips and Live Activities.
- **Mobile Architecture:** MVVM, MVVM-C, VIPER, Clean Architecture, Coordinator pattern, modular applications, Swift Package Manager modules, dependency injection, protocol-oriented programming, repository pattern and unidirectional data flow.
- **Reactive and Concurrent Programming:** Swift Concurrency, async/await, actors, structured concurrency, Combine, RxSwift, Grand Central Dispatch, OperationQueue, cancellation, task prioritization, thread safety and race-condition analysis.
- **Networking and Integrations:** URLSession, Alamofire, REST APIs, GraphQL, WebSockets, Codable, OAuth 2.0, OpenID Connect, JWT, deep links, universal links, payment SDKs, analytics SDKs and third-party identity providers.
- **Data and Offline Support:** Core Data, SQLite, Realm, CloudKit, UserDefaults, Keychain, file storage, background synchronization, offline-first workflows, conflict resolution, database migrations, caching and resumable uploads.
- **Testing and Quality:** XCTest, XCUITest, Quick, Nimble, SnapshotTesting, ViewInspector, OHHTTPStubs, dependency mocking, unit testing, UI testing, integration testing, contract testing, performance testing and test-driven development.
- **Build and Release Engineering:** Swift Package Manager, CocoaPods, Carthage, Fastlane, GitHub Actions, GitLab CI, Jenkins, Bitrise, Firebase App Distribution, TestFlight, App Store Connect, code signing and staged releases.
- **Monitoring and Analytics:** Firebase Crashlytics, Firebase Analytics, Sentry, Datadog, New Relic, MetricKit, os_log, Instruments, memory graph debugging, application launch metrics, crash analysis and feature flags.
- **Security and Privacy:** Keychain Services, Secure Enclave, biometric authentication, certificate pinning, encrypted storage, privacy manifests, App Transport Security, PII protection, secure token storage and OWASP mobile practices.
- **Senior Engineering Practices:** Architecture reviews, technical leadership, mentoring, code reviews, legacy modernization, performance profiling, production incident response, release planning, estimation and stakeholder communication.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected multi-module iOS applications using **Swift 5.3–6.0, Objective-C, UIKit, SwiftUI, Combine, Core Data, and Firebase**, establishing reusable architecture, testing, observability, and release standards across several product teams.
- Modernized legacy Objective-C and UIKit modules into **Swift, SwiftUI, MVVM-C, and Swift Package Manager** components through incremental replacement that preserved analytics, navigation, accessibility, and existing customer workflows.
- Reduced crash-free-session failures and application-not-responding incidents by **39%** by correcting retain cycles, unsafe force unwraps, blocked main-thread work, and lifecycle-related asynchronous task leaks.
- Designed offline-first field workflows with **Core Data, background URLSession, local encryption, conflict-aware synchronization, and resumable media uploads**, allowing users to complete critical tasks during unstable network conditions.
- Resolved duplicated submissions and inconsistent records caused by automatic retries, expired tokens, and interrupted synchronization by introducing idempotency keys, coordinated token refresh, transactional persistence, and explicit recovery states.
- Built secure API integrations with **URLSession, GraphQL, OAuth 2.0, OIDC, JWT, Keychain Services, certificate pinning, and biometric authentication** for tenant-aware customer and administrative operations.
- Improved startup time and complex-screen responsiveness through deferred dependency initialization, lazy feature loading, image resizing, diffable data sources, background decoding, and targeted Instruments profiling.
- Led adoption of **Swift Concurrency**, replacing callback-heavy networking and mixed GCD logic with `async/await`, actors, structured cancellation, and thread-safe repositories while retaining Objective-C interoperability.
- Strengthened CI/CD with **GitHub Actions, Fastlane, SwiftLint, XCTest, XCUITest, SnapshotTesting, Firebase App Distribution, and TestFlight**, automating validation, code signing, build delivery, and staged release checks.
- Mentored iOS engineers through architecture reviews, pull-request feedback, crash investigations, performance profiling, release retrospectives, and production-readiness assessments that improved ownership and code consistency.

Syscom Digital

Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed commerce and operational applications using **Swift 4.2–5.4, Objective-C, iOS 12–14, UIKit, RxSwift, Core Data, and Firebase**, supporting checkout, fulfillment, account management, and customer-service workflows.
- Implemented payment, refund, delivery-tracking, push-notification, and customer-profile features through reusable networking clients, strongly typed domain models, secure SDK integrations, and coordinated navigation flows.
- Reduced recurring checkout and payment failures by **30%** through idempotent requests, provider-specific error mapping, synchronized token refresh, retry limits, and recovery screens for interrupted transactions.

- Investigated inventory mismatches caused by stale local caches and delayed server events, then introduced cache-expiration policies, forced-refresh paths, transactional Core Data updates, and reconciliation telemetry.
- Migrated Objective-C view controllers and networking utilities into **Swift, MVVM, Coordinators, RxSwift, and Codable**, reducing tightly coupled presentation logic without disrupting existing application users.
- Fixed scrolling and rendering bottlenecks by adopting diffable data sources, stabilizing collection identifiers, reducing nested view hierarchies, caching transformed images, and moving parsing away from the main thread.
- Created reusable authentication, networking, analytics, feature-flag, deep-link, and error-handling frameworks that standardized behavior across multiple independently maintained iOS applications.
- Expanded release automation with **Jenkins, GitLab CI, Fastlane, XCTest, XCUITest, static analysis, automated signing, and TestFlight distribution** across development, QA, and production channels.
- Collaborated with backend engineers, product owners, QA specialists, designers, and external payment providers to translate ambiguous mobile requirements into testable workflows and release-ready acceptance criteria.

Soft Build

Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built native iPhone and iPad applications using **Objective-C, Swift, UIKit, Core Data, SQLite, Realm, REST APIs, and Firebase** for booking, commerce, reporting, and business-administration products.
- Improved application startup and key-screen load performance by **36%** by deferring optional initialization, reducing oversized API responses, caching reference data, and removing unnecessary view hierarchy complexity.
- Developed features for appointment scheduling, product catalogs, customer profiles, reporting, barcode scanning, push notifications, camera capture, location services, and secure user authentication.
- Resolved lost draft data, duplicate form submissions, inconsistent sessions, and failed background uploads by adding local persistence, request identifiers, synchronization queues, and visible recovery options.
- Migrated callback-heavy Objective-C networking into Swift services using **URLSession, Codable, operation queues, and protocol-based abstractions**, improving cancellation, error handling, readability, and testability.
- Introduced Core Data migrations and background synchronization for offline access, replacing fragile local storage routines while maintaining compatibility with data created by older application versions.
- Added **XCTest, Quick, Nimble, UI automation, API stubs, and integration tests** around pricing logic, authentication, persistence migrations, and high-risk customer workflows.
- Worked with senior engineers on memory profiling, Auto Layout diagnostics, database optimization, App Store releases, crash analysis, code reviews, and production support across multiple applications.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered native iOS functionality using **Objective-C, UIKit, iOS 7–9, Core Data, SQLite, and REST integrations** for customer applications, administrative tools, and mobile data-collection workflows.
- Built view controllers, custom views, table and collection adapters, background operations, local database utilities, and API integrations for forms, content retrieval, file uploads, and account management.
- Fixed production defects involving view-controller lifecycle errors, null references, duplicate taps, failed image uploads, malformed API responses, and missing user-facing error messages.

- Improved slow screens by reducing view hierarchy depth, reusing cells correctly, resizing images before rendering, batching database writes, and moving networking and parsing away from the main thread.
- Implemented push notifications, location capture, camera integration, deep links, Keychain-based credential storage, and local caching while handling device-specific behavior and permission states.
- Supported code signing, provisioning profiles, build configurations, release notes, physical-device testing, crash-log symbolication, and phased App Store deployment preparation.
- Collaborated with designers, backend developers, and project managers to convert business requirements into practical mobile workflows, stable API contracts, and realistic implementation estimates.

Borna Technology

Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior developers with **Objective-C, UIKit, iOS 6–8, Xcode, Core Data, SQLite, JSON APIs, and Git** across internal prototypes and small customer-facing mobile applications.
- Built basic view controllers, form screens, table views, validation utilities, and reusable interface components while learning memory management, delegation, and the iOS application lifecycle.
- Supported backend integration through HTTP requests, JSON parsing, local database updates, error handling, and Keychain storage under guidance from experienced mobile engineers.
- Investigated layout defects, invalid form submissions, crashes, database errors, and inconsistent API responses by reproducing problems across simulators and physical Apple devices.
- Contributed to QA checks, release documentation, basic unit tests, code reviews, and App Store preparation, establishing a foundation in maintainable iOS engineering and production support.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

September 2011 – May 2014

CERTIFICATIONS

- **App Development with Swift Certified User**
- **AWS Certified Developer – Associate**
- **Certified Kubernetes Application Developer — CKAD**
- **Professional Scrum Developer I — PSD I**
- **Certified ScrumMaster — CSM**

PROJECTS

Offline-First Field Operations Application

- Designed a modular iOS application using **Swift, SwiftUI, UIKit, Swift Concurrency, Core Data, background URLSession, and Firebase** for inspections, evidence collection, task assignment, and operational reporting.
- Implemented encrypted offline storage, resumable media uploads, conflict-aware synchronization, geolocation capture, barcode scanning, background retries, and role-based workflows for teams working in limited-connectivity environments.

- Added Crashlytics monitoring, automated UI tests, performance baselines, remote feature flags, and staged TestFlight releases to improve production stability and workflow completion visibility.

Objective-C to Swift Modernization Program

- Led the incremental migration of a legacy **Objective-C, UIKit, callback-based, and tightly coupled iOS application** into a modular Swift codebase using SwiftUI, MVVM-C, async/await, Combine, and Swift Package Manager.
- Replaced massive view controllers with feature modules, coordinators, protocol-based repositories, typed navigation, centralized error handling, testable API clients, and observable presentation state.
- Used interoperability adapters, snapshot tests, feature flags, automated regression suites, and staged production rollout to modernize the application without a high-risk complete rewrite.
