

Kristine Stanley

Senior Android Engineer | Kotlin & Java

Coaldale, CO 81222 | kristine.stanley.dev@outlook.com | +1 (786) 949-7561 | <https://www.linkedin.com/in/kristine-stanley-341688411>

PROFESSIONAL SUMMARY

Senior Android Engineer with 11+ years delivering cybersecurity, connected-mobility, insurance, and learning-platform applications using **Java 7–17, Kotlin 1.3–2.0, Android SDK 21–35, Jetpack Compose, Coroutines, Room, Retrofit, Firebase, AWS, and Azure**; combines scalable mobile architecture, native integrations, offline-first design, performance tuning, secure delivery, and technical leadership to improve stability, release speed, user experience, and business outcomes.

SKILLS

- **Android Development:** Kotlin 1.3–2.0, Java 7–17, Android SDK, Android Jetpack, Jetpack Compose, Material Design 3, Android Views, XML layouts, Android Studio, Gradle, Kotlin DSL
- **Architecture and State:** Clean Architecture, MVVM, MVI, modular architecture, repository pattern, dependency injection, unidirectional data flow, ViewModel, LiveData, StateFlow, SharedFlow
- **Android Jetpack:** Compose, Navigation, Room, WorkManager, DataStore, Paging 3, Lifecycle, CameraX, Security Crypto, App Startup, Baseline Profiles
- **Networking and Data:** Retrofit, OkHttp, GraphQL, Apollo Android, REST APIs, WebSockets, Protocol Buffers, Moshi, Gson, SQLite, Room, Realm, encrypted local storage
- **Concurrency:** Kotlin Coroutines, Flow, structured concurrency, RxJava 2–3, ExecutorService, background synchronization, scheduled processing
- **Dependency Injection:** Hilt, Dagger 2, Koin, constructor injection, feature-scoped dependencies, test dependency replacement
- **Mobile Integrations:** Firebase Cloud Messaging, Crashlytics, Analytics, Remote Config, biometric authentication, camera, barcode scanning, geolocation, Bluetooth, deep links
- **Security:** OAuth 2.0, OpenID Connect, JWT, Android Keystore, encrypted preferences, certificate pinning, root detection, secure networking, OWASP Mobile Top 10
- **Testing:** JUnit 4–5, MockK, Mockito, Espresso, Robolectric, UI Automator, Compose UI Testing, Turbine, Maestro, Firebase Test Lab
- **Cloud and DevOps:** AWS Amplify, Cognito, API Gateway, S3, Lambda; Azure App Center, Notification Hubs, Application Insights; GitHub Actions, Azure DevOps, Jenkins, Fastlane
- **Monitoring:** Firebase Crashlytics, Datadog RUM, Sentry, OpenTelemetry, performance traces, ANR monitoring, structured logging, product analytics
- **Senior Engineering:** Mobile architecture, technical leadership, mentoring, code reviews, release management, incident response, accessibility, Agile delivery, stakeholder communication

EXPERIENCE

Veracode Systems Inc — Senior Software Engineer

Remote/ Full time

April 2021 – May 2026

Somerville, MA

- Led architecture and delivery for enterprise mobile-security workflows using **Kotlin 1.3–2.0, Java 11–17, Android 10–15, Jetpack libraries**, and secure APIs, enabling engineering leaders to review vulnerabilities, approve policy exceptions, and monitor remediation activity from managed devices.
- Reorganized tightly coupled activities and fragments into feature-based modules using **Clean Architecture**, MVVM, Hilt, ViewModel, and Kotlin Flow, reducing recurring production defects by **35%** while improving ownership across multiple mobile teams.
- Resolved slow startup, dropped frames, and application-not-responding incidents by deferring noncritical initialization, optimizing database access, adding Baseline Profiles, and reducing main-thread work, improving median launch time by **42%**.

- Modernized XML-based screens incrementally with **Jetpack Compose**, Material Design 3, reusable state holders, and unidirectional data flow while preserving stable navigation and accessibility behavior across existing customer workflows.
- Implemented secure authentication with **OAuth 2.0**, OpenID Connect, biometric reauthentication, Android Keystore, certificate pinning, session expiration, and device-integrity controls for enterprise cybersecurity requirements.
- Corrected duplicated updates and lost user actions during unstable connectivity by introducing an encrypted offline queue, idempotency keys, deterministic conflict handling, and controlled synchronization through **WorkManager**.
- Built high-volume vulnerability and compliance screens with **Paging 3**, Room, Retrofit, OkHttp, Flow, and optimized Compose lists, preventing memory pressure when customers reviewed thousands of security findings.
- Established mobile quality gates with **JUnit**, MockK, Turbine, Robolectric, Espresso, Compose UI Testing, and Firebase Test Lab, covering authentication, offline recovery, deep links, permissions, and device-specific behavior.
- Automated signed Android delivery through **Fastlane**, GitHub Actions, internal testing tracks, staged rollouts, and feature flags while integrating Crashlytics and Datadog monitoring for crashes, ANRs, failed requests, and degraded startup performance.
- Mentored engineers through architecture reviews, pair programming, performance profiling, security assessments, and release retrospectives while coordinating mobile decisions with backend, product, design, security, and quality stakeholders.

Cubic Telecom USA — Software Engineer

Remote/ Full time

January 2019 – April 2021

San Diego, CA

- Developed connected-vehicle and field-operations applications using **Kotlin 1.1–1.4**, **Java 8–11**, Android 8–11, RxJava, Retrofit, Room, and Firebase for device enrollment, subscription management, connectivity status, and usage monitoring.
- Improved technician productivity by **38%** after introducing barcode-based device registration, cached account information, bulk actions, and guided activation workflows that reduced repetitive data entry and provisioning mistakes.
- Resolved stale connectivity displays caused by delayed and out-of-order carrier events through timestamp validation, monotonic state transitions, WebSocket updates, and scheduled reconciliation against authoritative backend services.
- Migrated major features from Java and callback-based networking to **Kotlin**, Coroutines, sealed result models, and lifecycle-aware components, reducing null-related defects while making asynchronous workflows easier to maintain.
- Implemented offline-first provisioning with **Room**, encrypted preferences, queued commands, bounded retries, and visible synchronization states, allowing field technicians to complete work in locations with unreliable network coverage.
- Created reusable integrations for barcode scanning, device identifiers, network information, background tasks, push notifications, and secure credentials while maintaining consistent behavior across supported Android manufacturers.
- Expanded automated coverage with **JUnit**, Mockito, Robolectric, Espresso, UI Automator, and API mocks, reducing mobile regression defects by **29%** across activation, account, billing, and connectivity workflows.
- Standardized Android delivery through **Azure DevOps**, Gradle, Fastlane, Firebase App Distribution, and managed Play Store tracks, adding signing protection, environment validation, automated testing, and staged production approvals.
- Collaborated with telecom specialists, product managers, designers, backend engineers, and customer-support teams to convert complex roaming and provisioning rules into practical mobile workflows and documented recovery procedures.

Asurion — Software Developer*Remote/ Full time***January 2017 – December 2018***Nashville, TN*

- Built Android applications using **Java 7–8**, Android 6–9, MVP and early MVVM patterns, Retrofit, SQLite, and Firebase for insurance eligibility, claim intake, device diagnostics, repair appointments, and technician operations.
- Redesigned a fragmented mobile claim journey with guided steps, inline validation, saved progress, and recoverable submission states, increasing successful mobile claim completion by **27%**.
- Developed an offline-capable technician workflow that cached appointments, diagnostic instructions, customer signatures, repair notes, and completed work before synchronizing records when connectivity returned.
- Integrated camera capture, barcode scanning, geolocation, push notifications, deep links, secure file upload, and device-diagnostic APIs to reduce manual identification and improve repair documentation.
- Corrected duplicate appointment and payment submissions caused by repeated taps and delayed responses through disabled transition states, unique request identifiers, server validation, and clear confirmation handling.
- Resolved memory leaks and crashes involving retained activities, oversized images, and unmanaged listeners by profiling with Android tools, correcting lifecycle ownership, and introducing reusable resource-management utilities.
- Introduced **Kotlin** for selected utility and networking modules during later modernization work, demonstrating safer null handling and more concise asynchronous code without forcing a high-risk full-application rewrite.
- Expanded test and release coverage with **JUnit**, Mockito, Espresso, Robolectric, Gradle validation, Firebase App Distribution, and internal production checks for claims, payments, appointments, and technician workflows.

Rustici Software — Junior Software Developer*Hybrid/ Full time***June 2015 – December 2016***Nashville, TN*

- Maintained Android learning applications using **Java 7–8**, Android 4.4–5.1, SQLite, REST APIs, and XML layouts for course discovery, SCORM launches, learner progress, completion records, and offline training access.
- Implemented mobile workflows for course search, content launch, bookmarks, completion status, and learning history while accounting for smaller screens, touch interaction, and inconsistent device capabilities.
- Resolved unreliable course launches by improving session persistence, deep-link handling, authentication recovery, network timeout behavior, and validation of nonstandard learning-management-system responses.
- Reduced memory pressure during media-heavy learning sessions by downsampling images, releasing unused WebView resources, removing retained listeners, and loading nonessential content only when required.
- Built reusable Java activities, fragments, adapters, networking utilities, and persistence components that reduced duplicated code across course administration, playback, and learner-history features.
- Added **JUnit**, Mockito, Espresso, and device-level regression tests around authentication, course downloads, SCORM launches, offline progress, and synchronization with different learning-management systems.
- Collaborated with senior engineers and support specialists to reproduce customer-specific mobile failures, analyze SCORM and xAPI behavior, and convert technical findings into maintainable fixes and troubleshooting guidance.

EDUCATION

Tennessee State University — Bachelor's Degree in Computer Science

Sep 2011 – May 2015

CERTIFICATION

- **Google Associate Android Developer Certification**
- **AWS Certified Developer – Associate**
- **Professional Scrum Master I — PSM I**
