

Kristine Stanley

Staff / Senior iOS Engineer

Coaldale, CO 81222 | kristine.stanley.dev@outlook.com | +1 (786) 949-7561 | <https://www.linkedin.com/in/kristine-stanley-341688411>

PROFESSIONAL SUMMARY

Staff/Senior iOS Engineer with 11+ years delivering secure mobile products across application security, connected mobility, device protection, and enterprise SaaS using **Swift 2.2–6.x, Objective-C, iOS 9–18, UIKit, SwiftUI, Combine, Core Data, REST, AWS, and CI/CD**, providing mobile architecture, legacy modernization, performance tuning, App Store delivery, production reliability, and technical leadership that improves user experience, release quality, and business outcomes.

SKILLS

- **Languages:** Swift 2.2–6.x, Objective-C, SQL, Python, JavaScript, TypeScript, Bash
- **Apple Platforms:** iOS, iPadOS, watchOS fundamentals, UIKit, SwiftUI, Foundation, Combine, Core Data, Core Animation, Core Location, Core Bluetooth, MapKit, AVFoundation
- **Swift Engineering:** Swift Concurrency, async/await, actors, structured concurrency, protocols, generics, extensions, property wrappers, dependency injection, Swift Package Manager
- **iOS Architecture:** MVVM, MVVM-C, Clean Architecture, VIPER, coordinators, modular architecture, protocol-oriented design, reactive programming, dependency inversion
- **Networking and APIs:** URLSession, REST, GraphQL, WebSockets, JSON, Codable, OAuth 2.0, OpenID Connect, JWT, webhooks, pagination, offline synchronization
- **State and Persistence:** Core Data, SQLite, Realm, UserDefaults, Keychain Services, CloudKit, offline-first workflows, caching, data migration, conflict resolution
- **Frontend and UX:** SwiftUI, UIKit, Auto Layout, accessibility, Dynamic Type, localization, reusable design systems, responsive iPhone and iPad interfaces
- **Reactive Technologies:** Combine, RxSwift, RxCocoa, NotificationCenter, publishers and subscribers, event-driven user interfaces
- **Testing:** XCTest, XCUITest, Quick, Nimble, SnapshotTesting, integration testing, UI automation, mocked services, contract testing, accessibility testing
- **Performance:** Instruments, Time Profiler, Allocations, Leaks, Energy Log, MetricKit, memory optimization, launch-time analysis, rendering optimization
- **Mobile Security:** Keychain, CryptoKit, certificate pinning, biometric authentication, secure storage, jailbreak detection, OWASP MASVS, privacy-safe logging
- **DevOps and Delivery:** Xcode, Swift Package Manager, CocoaPods, Fastlane, Xcode Cloud, GitHub Actions, Jenkins, TestFlight, App Store Connect, Firebase App Distribution
- **Cloud and Backend Integration:** AWS API Gateway, Lambda, S3, Cognito, SNS, CloudWatch, Firebase Authentication, Crashlytics, Remote Config
- **Monitoring:** Firebase Crashlytics, Sentry, Datadog, New Relic, MetricKit, structured logging, crash symbolication, release-health monitoring
- **Senior Engineering:** Mobile architecture reviews, ADRs, technical roadmaps, code reviews, mentoring, Agile delivery, incident response, release planning, stakeholder collaboration

EXPERIENCE

Veracode Systems Inc — Senior Software Engineer

Remote/ Full time

April 2021 – May 2026

Somerville, MA

- Architected secure iOS capabilities using **Swift 5.3–6.x, Objective-C, UIKit, SwiftUI, and Combine** for enterprise vulnerability triage, policy review, and remediation workflows.
- Modernized legacy Objective-C modules into modular Swift packages with clear ownership boundaries, dependency injection, and backward-compatible interfaces for established enterprise users.

- Improved cold-start time and high-volume findings rendering by **39%** through launch profiling, lazy initialization, background decoding, image caching, and incremental list updates.
- Resolved an intermittent production crash caused by concurrent Core Data writes and invalid object references by introducing isolated contexts, actor-based coordination, and regression tests.
- Built secure REST and GraphQL integrations for scan status, findings, policy metadata, and remediation guidance with token refresh, offline caching, pagination, and resilient retry handling.
- Delivered reusable SwiftUI and UIKit components for advanced filtering, bulk actions, accessible data visualization, deep links, and real-time status updates across multiple application modules.
- Upgraded older navigation, networking, and persistence layers through staged iOS migrations while replacing deprecated APIs and preserving support for managed enterprise device environments.
- Strengthened mobile security with **OAuth 2.0, OpenID Connect, Keychain Services, certificate pinning, jailbreak checks, data encryption, and privacy-safe diagnostic logging.**
- Automated signed builds, unit tests, UI tests, beta distribution, and App Store workflows with **Xcode Cloud, Fastlane, GitHub Actions, XCTest, XCUITest, and TestFlight.**
- Led mobile architecture reviews, incident retrospectives, release planning, code-quality standards, and mentoring while coordinating delivery with product, security, QA, API, and SRE teams.

Cubic Telecom USA — Software Engineer

Remote/ Full time

January 2019 – April 2021

San Diego, CA

- Developed connected-vehicle applications using **Swift 4.1–5.3, Objective-C, iOS 11–14, UIKit, RxSwift, and Core Bluetooth** for activation, subscription, diagnostics, and mobility services.
- Designed mobile workflows that connected drivers with vehicle, SIM, carrier, billing, and support services through secure APIs, Bluetooth communication, and push notifications.
- Increased successful remote activation completion by **34%** through clearer onboarding, resumable provisioning, local state recovery, proactive validation, and improved carrier-error messaging.
- Eliminated duplicate activation requests caused by network retries and delayed carrier responses by implementing idempotency keys, request correlation, and explicit client-side state transitions.
- Built background synchronization for subscription changes, vehicle status, roaming information, and diagnostic events using URLSession, background tasks, local persistence, and retry queues.
- Improved app maintainability by adopting MVVM-C, protocol-driven services, reusable design-system components, typed networking, feature flags, and modular CocoaPods and Swift Package dependencies.
- Optimized scrolling, map rendering, and telemetry dashboards by reducing main-thread work, batching UI updates, reusing views, and profiling memory and CPU behavior with Instruments.
- Created automated delivery pipelines with Fastlane, Jenkins, XCTest, XCUITest, TestFlight, and staged App Store releases while adding crash monitoring and release-health dashboards.
- Collaborated with automotive partners, telecom specialists, backend engineers, designers, and QA teams to define requirements, troubleshoot field issues, and coordinate global mobile releases.

Asurion — Software Developer

Remote/ Full time

January 2017 – December 2018

Nashville, TN

- Built customer and technician applications using **Python 3.4–3.7, Django REST Framework, Vue 1.x** with later Vue 2 adoption, Redis, and SQL Server for eligibility, claims, payments, repair scheduling, and status tracking.
- Redesigned a fragmented claim journey as a guided Vue workflow backed by recoverable Python orchestration APIs, increasing successful online claim completion by **27%** through clearer validation and failure recovery.
- Created a backend-for-frontend layer that combined customer, policy, inventory, payment, and appointment information, shielding browser applications from incompatible downstream contracts and partial service outages.

- Corrected duplicate repair bookings caused by repeated submissions and delayed responses through idempotency tokens, database uniqueness constraints, transactional validation, and visible request-state handling.
- Migrated selected jQuery and server-rendered pages to reusable **Vue components** while introducing shared form controls, centralized state, route-level organization, and consistent client-side validation behavior.
- Implemented **Redis** caching for frequently requested eligibility and repair-location data, applying explicit invalidation and short expiration periods to improve responsiveness without returning outdated policy decisions.
- Developed **Celery** reconciliation jobs for incomplete claims and delayed payment callbacks, recovering transactions after provider timeouts while preserving audit records for customer-service and finance investigations.
- Expanded automated coverage with **Pytest**, unittest, Mocha, Chai, browser tests, service mocks, and API integration suites for claims, payments, appointments, eligibility decisions, and recoverable production failures.

Rustici Software — Junior Software Developer

Hybrid/ Full time

June 2015 – December 2016

Nashville, TN

- Developed iPhone and iPad learning experiences using **Objective-C, UIKit, Foundation, Core Data, and REST services** for course discovery, offline study, activity tracking, and reporting.
- Created mobile integrations for SCORM and xAPI workflows that downloaded learning packages, launched supported content, synchronized learner progress, and handled interrupted sessions.
- Modernized selected manual-memory-management components toward ARC while separating networking, persistence, and presentation concerns for safer maintenance and easier testing.
- Investigated production failures involving malformed course metadata, unsupported media, interrupted downloads, inconsistent encodings, and timezone conversion across customer environments.
- Improved offline course loading and progress synchronization by streaming large assets, caching metadata, compressing payloads, batching writes, and retrying failed xAPI statements.
- Added XCTest coverage, fixture-based parser tests, repeatable builds, crash-symbolication procedures, and CI checks that increased confidence across shared mobile releases.
- Worked closely with senior engineers and customer-support specialists to reproduce device-specific issues, document root causes, review fixes, and deliver maintainable mobile enhancements.

EDUCATION

Tennessee State University — Bachelor's Degree in Computer Science

Sep 2011 – May 2015

CERTIFICATION

- **GIAC Mobile Device Security Analyst — GMOB**
- **AWS Certified Developer – Associate**
- **Certified ScrumMaster — CSM**
