

Kristine Stanley

Staff / Senior Java Angular Full-Stack Engineer

Coaldale, CO 81222 | kristine.stanley.dev@outlook.com | +1 (786) 949-7561 | <https://www.linkedin.com/in/kristine-stanley-341688411>

PROFESSIONAL SUMMARY

Staff/Senior Java Angular Engineer with 11+ years delivering secure enterprise platforms across application security, connected mobility, device protection, and SaaS using **Java 8–21, Spring Boot 1.5–3.4, AngularJS 1.5, Angular 5–19, TypeScript, PostgreSQL, Kafka, AWS, and Kubernetes**, providing full-stack architecture, legacy modernization, high-volume API development, cloud delivery, production reliability, and technical leadership that improves performance, scalability, and business outcomes.

SKILLS

- **Backend:** Java 8–21, Spring Boot 1.5–3.4, Spring Framework, Spring MVC, Spring WebFlux, Spring Security, Spring Data JPA, Hibernate, Maven, Gradle
- **Frontend:** AngularJS, Angular 5–19, TypeScript 4–5, JavaScript, RxJS, NgRx, Angular Material, PrimeNG, Tailwind CSS, Bootstrap, HTML5, CSS3, SCSS
- **Angular Development:** Standalone components, signals, reactive forms, lazy loading, route guards, interceptors, dependency injection, change detection, reusable UI libraries, accessibility
- **APIs and Integration:** REST, GraphQL, gRPC, WebSockets, OpenAPI, Swagger, JSON, Protocol Buffers, API versioning, webhooks, OAuth 2.0, OpenID Connect, JWT
- **Architecture:** Microservices, modular monoliths, event-driven architecture, domain-driven design, clean architecture, hexagonal architecture, CQRS, service-oriented architecture
- **Messaging:** Apache Kafka, Kafka Streams, RabbitMQ, AWS SQS, AWS SNS, consumer groups, schema evolution, dead-letter queues, idempotent processing
- **Cloud Platforms:** AWS EKS, ECS, EC2, Lambda, API Gateway, S3, RDS, DynamoDB, ElastiCache, IAM, CloudWatch, Azure App Service, Azure Kubernetes Service
- **Databases:** PostgreSQL, MySQL, SQL Server, Oracle, Cassandra, DynamoDB, MongoDB, Redis, Elasticsearch, database indexing, query optimization
- **DevOps:** Docker, Kubernetes, Helm, Terraform, Argo CD, GitHub Actions, GitLab CI/CD, Jenkins, Linux, Nginx, SonarQube
- **Backend Testing:** JUnit 5, Mockito, Spring Boot Test, Testcontainers, Pact, WireMock, REST Assured, JMeter, Gatling
- **Frontend Testing:** Jasmine, Karma, Jest, Cypress, Playwright, Protractor, Selenium, Angular Testing Library, component and end-to-end testing
- **Monitoring:** OpenTelemetry, Prometheus, Grafana, Datadog, New Relic, ELK Stack, CloudWatch, distributed tracing, structured logging, SLI/SLO management
- **Security:** Spring Security, OAuth 2.0, OIDC, JWT, RBAC, TLS, OWASP, SAST, DAST, secrets management, dependency scanning, audit logging
- **Senior Engineering:** Architecture reviews, ADRs, technical roadmaps, code reviews, mentoring, Agile delivery, incident response, performance tuning, stakeholder collaboration

EXPERIENCE

Veracode Systems Inc — Senior Software Engineer

Remote/ Full time

April 2021 – May 2026

Somerville, MA

- Architected enterprise application-security capabilities using **Java 11–21, Spring Boot 2.2–3.4, Angular 9–19, TypeScript, and PostgreSQL** across multi-tenant scan, policy, remediation, and compliance workflows.
- Modernized a tightly coupled Java platform into **domain-aligned microservices** and independently deployable Angular applications while preserving backward-compatible APIs for established enterprise customers.

- Reduced median API response time by **42%** through Hibernate query tuning, selective indexing, Redis caching, asynchronous processing, and removal of repeated authorization lookups.
- Resolved a production thread-exhaustion incident caused by blocking downstream calls and unbounded retries by introducing **WebClient, timeouts, circuit breakers, bulkheads, and retry budgets**.
- Designed event-driven workflows with **Apache Kafka and AWS SQS** for scan orchestration, findings enrichment, notifications, and audit processing with idempotent consumers and dead-letter recovery.
- Built accessible Angular and TypeScript interfaces for vulnerability triage, policy administration, advanced filtering, bulk actions, and real-time scan status using reusable design-system components.
- Upgraded legacy Spring applications and Angular modules through staged dependency migrations, deprecated API removal, automated regression coverage, and controlled **canary releases**.
- Strengthened platform security with **Spring Security, OAuth 2.0, OpenID Connect, RBAC**, secrets rotation, input validation, dependency scanning, and auditable authorization decisions.
- Deployed containerized services to **AWS EKS** using Docker, Kubernetes, Helm, Terraform, and GitHub Actions while adding autoscaling, readiness probes, observability, and rollback safeguards.
- Led architecture reviews, production incident retrospectives, code-quality standards, and mentoring for distributed engineers while aligning security, product, QA, and SRE stakeholders.

Cubic Telecom USA — Software Engineer

Remote/ Full time

January 2019 – April 2021

San Diego, CA

- Developed connected-vehicle and IoT services using **Java 8–11, Spring Boot 1.5–2.2, Angular 5–9, TypeScript, Kafka, and PostgreSQL** for device activation and subscription management.
- Designed scalable REST APIs and Angular operations portals that unified requests from automotive manufacturers, mobile-network operators, billing systems, and internal support teams.
- Increased provisioning throughput by **35%** through Kafka partition rebalancing, consumer concurrency tuning, batch database writes, Redis caching, and removal of synchronous partner calls.
- Eliminated duplicate SIM activations caused by retry storms and delayed carrier acknowledgments by implementing **idempotency keys, deduplication windows, and explicit state transitions**.
- Built Kafka producers and consumers with schema compatibility, ordered processing, dead-letter handling, replay controls, and operational metrics for globally distributed integration workflows.
- Improved Angular application maintainability through lazy-loaded feature modules, typed reactive forms, shared UI libraries, route guards, centralized error handling, and predictable NgRx state.
- Optimized **PostgreSQL, Cassandra, and Redis** access by reducing lock contention, correcting inefficient indexes, consolidating repeated queries, and defining predictable cache-expiration rules.
- Containerized Java and Angular workloads with Docker and deployed them through Kubernetes-based AWS pipelines with health checks, resource limits, rolling upgrades, and environment isolation.
- Collaborated with product managers, SRE teams, telecom specialists, and QA engineers to estimate features, review designs, troubleshoot production incidents, and coordinate global releases.

Asurion — Software Developer

Remote/ Full time

January 2017 – December 2018

Nashville, TN

- Developed device-protection applications using **Java 8, Spring Boot, AngularJS, Angular 4, and PostgreSQL** for claims, eligibility, fulfillment, repair, and customer-support workflows.
- Implemented versioned REST APIs and responsive Angular experiences that integrated customer portals with insurance, inventory, payment, shipping, and third-party fulfillment platforms.
- Reduced average claims-processing time by **28%** through parallel validation, Redis caching, optimized SQL access, and asynchronous execution of noncritical notification activities.
- Resolved an intermittent double-fulfillment defect caused by concurrent retries and non-atomic status updates by adding **database locking, idempotent commands, and traceable workflow states**.
- Modernized AngularJS screens and callback-heavy Spring services into component-based Angular modules, clearer service boundaries, typed forms, and centralized exception handling.

- Built message-driven processing with **RabbitMQ and Kafka** for claims events, inventory updates, repair routing, and customer notifications with retry limits and poison-message isolation.
- Expanded automated quality coverage with **JUnit, Mockito, Spring Boot Test, Jasmine, Karma, Protractor, and Selenium** while adding Jenkins quality gates for regression prevention.
- Partnered with analysts, customer-support teams, and senior engineers to refine requirements, investigate production failures, review code, and deliver dependable releases.

Rustici Software — Junior Software Developer

Hybrid/ Full time

June 2015 – December 2016

Nashville, TN

- Developed e-learning platform capabilities using **Java 7–8, Spring 4, Hibernate, AngularJS 1.2–1.4, PostgreSQL, and MySQL** for course import, launch, tracking, and reporting workflows.
- Created REST endpoints and background processors for **SCORM and xAPI** data while maintaining compatibility with varied learning-management systems and customer content packages.
- Modernized server-rendered pages by introducing focused AngularJS modules for searchable reports, course administration, learner activity, and reusable form validation.
- Investigated production import failures involving malformed XML, inconsistent character encodings, oversized archives, missing metadata, and timezone conversion errors.
- Improved PostgreSQL and MySQL performance by adding targeted indexes, simplifying Hibernate queries, introducing pagination, and caching frequently requested course metadata.
- Added **JUnit, Mockito, Jasmine, integration, and browser-based test coverage** together with repeatable Jenkins builds and deployment scripts that increased confidence in shared releases.
- Worked closely with senior developers and customer-support specialists to reproduce customer issues, document root causes, review fixes, and deliver maintainable enhancements.

EDUCATION

Tennessee State University — Bachelor's Degree in Computer Science

Sep 2011 – May 2015

CERTIFICATION

- **Oracle Certified Professional: Java SE 11 Developer**
- **AWS Certified Developer – Associate**
- **Certified Kubernetes Application Developer — CKAD**
