

Kristine Stanley

Staff Software Engineer – React, Node (Express/NestJS), AWS

Coaldale, CO 81222 | kristine.stanley.dev@outlook.com | +1 (786) 949-7561 | <https://www.linkedin.com/in/kristine-stanley-341688411>

PROFESSIONAL SUMMARY

Senior Mobile Engineer with 11+ years delivering cybersecurity, connected-mobility, insurance, and learning-platform products using **React Native 0.62–0.76**, **React 16–19**, **TypeScript 4–5**, **iOS**, **Android**, **GraphQL**, **REST**, **AWS**, and **Azure**; combines cross-platform architecture, native integration, offline-first design, performance optimization, secure delivery, and technical leadership to improve release speed, user engagement, application stability, and business outcomes.

SKILLS

- **Mobile Development:** React Native 0.62–0.76, React 16–19, TypeScript 4–5, JavaScript ES6+, Expo, EAS Build, React Native CLI, Hermes, Fabric, TurboModules, Codegen
- **State and Data Management:** Redux Toolkit, MobX, Zustand, TanStack Query, Context API, React Hook Form, AsyncStorage, MMKV, normalized state, optimistic updates
- **Navigation and UI:** React Navigation, deep linking, universal links, responsive layouts, NativeWind, Styled Components, React Native Paper, reusable design systems, WCAG accessibility
- **Native Development:** iOS, Android, Swift, Objective-C, Kotlin, Java, Xcode, Android Studio, CocoaPods, Gradle, native modules, platform channels, background services
- **Device Integrations:** Push notifications, biometrics, secure storage, camera, barcode scanning, geolocation, Bluetooth, file handling, background synchronization, app links
- **API Technologies:** REST, GraphQL, Apollo Client, WebSockets, Server-Sent Events, OpenAPI, OAuth 2.0, OpenID Connect, JWT, certificate pinning, API gateways
- **Mobile Architecture:** Feature-based architecture, Clean Architecture, offline-first design, modular applications, micro-frontends for mobile, dependency injection, repository pattern
- **Testing:** Jest, React Native Testing Library, Detox, Maestro, Appium, Cypress, XCTest, Espresso, contract testing, integration testing, end-to-end testing
- **Cloud and Services:** AWS Amplify, Cognito, API Gateway, Lambda, AppSync, S3, CloudFront; Azure App Service, Functions, Notification Hubs, Application Insights
- **DevOps and Delivery:** Fastlane, EAS Build, Bitrise, GitHub Actions, Azure DevOps, Jenkins, Docker, Firebase App Distribution, TestFlight, Google Play Console
- **Monitoring and Analytics:** Firebase Crashlytics, Sentry, Datadog RUM, OpenTelemetry, Firebase Analytics, performance tracing, structured logging, feature analytics
- **Senior Engineering:** Mobile architecture, code reviews, mentoring, release management, incident response, root-cause analysis, Agile delivery, product collaboration

EXPERIENCE

Veracode Systems Inc — Senior Software Engineer

Remote/ Full time

April 2021 – May 2026

Somerville, MA

- Led architecture and delivery for enterprise mobile security workflows using **React Native 0.62**, later modern React Native releases, **TypeScript**, **Redux Toolkit**, and **GraphQL**, enabling engineering leaders to review vulnerabilities, approve policies, and monitor remediation activity from managed devices.
- Replaced tightly coupled screens and duplicated Redux logic with feature-based modules, typed navigation, reusable hooks, and **TanStack Query**, reducing recurring mobile defects by **35%** across iOS and Android releases.
- Resolved slow startup and frozen vulnerability dashboards by enabling **Hermes**, reducing synchronous initialization, virtualizing large result lists, and optimizing cached queries, improving median application launch time by **41%**.

- Modernized the application through incremental React Native upgrades, replacing deprecated libraries, converting class components to functional components, and preparing critical modules for the **New Architecture** without interrupting customer releases.
- Implemented secure authentication with **OAuth 2.0**, OpenID Connect, biometric reauthentication, Keychain and Keystore storage, certificate validation, and automatic session expiration for enterprise security requirements.
- Corrected data-loss and duplicate-update defects in intermittent network conditions by introducing an encrypted offline queue, deterministic conflict resolution, idempotency keys, and controlled background synchronization.
- Developed native bridges in **Swift** and **Kotlin** for biometric controls, device-integrity checks, secure file handling, notification actions, and enterprise mobile-device-management configuration.
- Established automated testing with **Jest**, React Native Testing Library, **Detox**, and contract mocks, covering authentication, vulnerability triage, offline recovery, deep links, and platform-specific permission behavior.
- Automated signed iOS and Android delivery through **Fastlane**, GitHub Actions, TestFlight, and managed Play Store tracks while adding Crashlytics and Datadog monitoring for crashes, startup delays, and failed API requests.
- Mentored mobile engineers through architecture reviews, pairing, performance profiling, accessibility assessments, and release retrospectives while coordinating decisions across security, backend, product, design, and quality teams.

Cubic Telecom USA — Software Engineer

Remote/ Full time

January 2019 – April 2021

San Diego, CA

- Developed connected-vehicle and fleet-management applications using **React Native 0.52–0.63**, **TypeScript**, Redux, React Navigation, and REST APIs for device registration, subscription management, connectivity status, and usage monitoring.
- Improved field-user productivity by **38%** after introducing barcode-based device enrollment, cached account data, bulk actions, and guided activation workflows that reduced repetitive manual entry.
- Resolved stale connectivity information caused by delayed and out-of-order carrier events through timestamp validation, monotonic state transitions, WebSocket updates, and scheduled client-side reconciliation.
- Created reusable native modules for SIM details, device identifiers, secure credentials, network status, and background tasks while preserving consistent behavior across supported iOS and Android versions.
- Implemented offline-first workflows with encrypted local storage, request queuing, retry limits, and visible synchronization status, allowing technicians to complete provisioning tasks in areas with unstable connectivity.
- Integrated versioned REST services for accounts, subscriptions, billing, and carrier operations while standardizing authentication refresh, error mapping, pagination, and request cancellation across mobile features.
- Expanded automated coverage with **Jest**, React Native Testing Library, Appium, and API mocks, reducing mobile regression defects by **29%** across activation, account, and connectivity workflows.
- Standardized mobile delivery through **Azure DevOps**, Fastlane, TestFlight, and Google Play internal tracks, adding build validation, signing controls, environment configuration, and staged release approvals.
- Collaborated with telecom specialists, product managers, designers, backend engineers, and support teams to convert complex roaming and provisioning rules into practical mobile experiences and documented operational recovery paths.

Asurion — Software Developer*Remote/ Full time***January 2017 – December 2018***Nashville, TN*

- Built cross-platform customer and technician applications using **React Native**, JavaScript, Redux, REST APIs, and native device capabilities for insurance eligibility, claim intake, diagnostics, appointments, and repair tracking.
- Redesigned a fragmented mobile claim process with guided steps, inline validation, saved progress, and recoverable submission states, increasing successful mobile claim completion by **27%**.
- Developed an offline-capable technician workflow that cached assigned appointments, diagnostic steps, customer signatures, and repair outcomes before synchronizing completed work when connectivity returned.
- Integrated camera capture, barcode scanning, geolocation, push notifications, deep links, and secure file upload to reduce manual device identification and improve field-service documentation.
- Corrected duplicate appointment and payment submissions caused by repeated taps and delayed responses through disabled transition states, request identifiers, server validation, and visible confirmation handling.
- Resolved platform-specific crashes involving Android activity restoration and iOS memory pressure by profiling lifecycle behavior, releasing image resources, and isolating native dependencies behind stable adapters.
- Automated application testing and release validation with **Jest**, Enzyme, Appium, Xcode build checks, Gradle tasks, and internal distribution channels for customer and technician application variants.
- Supported production incidents by analyzing crash reports, reproducing device-specific failures, coordinating API corrections, and documenting root causes that prevented repeated disruption to claims and repair journeys.

Rustici Software — Junior Software Developer*Hybrid/ Full time***June 2015 – December 2016***Nashville, TN*

- Maintained responsive learning-platform experiences using JavaScript, Backbone.js, jQuery, HTML5, CSS3, and Cordova-based mobile packaging for course administration, content launches, and learner progress tracking.
- Implemented mobile-friendly workflows for course search, launch configuration, completion status, and learning history while accounting for smaller screens, touch interaction, and inconsistent browser capabilities.
- Resolved unreliable course launches on mobile devices by improving session persistence, deep-link handling, network timeout recovery, and validation of nonstandard learning-management-system responses.
- Reduced memory pressure during media-heavy course sessions by releasing unused views, limiting retained event listeners, deferring nonessential assets, and improving image-loading behavior.
- Built reusable JavaScript views, form utilities, and API adapters that reduced duplicated interface logic across desktop and mobile learning-management workflows.
- Evaluated **React Native** during late 2016 through isolated prototypes for authentication, course lists, and learner status, documenting native integration, offline storage, navigation, and testing considerations.
- Collaborated with senior engineers and support specialists to reproduce unusual SCORM and xAPI behavior on mobile devices and convert customer reports into maintainable fixes and troubleshooting guidance.

EDUCATION

Tennessee State University — Bachelor's Degree in Computer Science

Sep 2011 – May 2015

CERTIFICATION

- **AWS Certified Developer – Associate**
- **Microsoft Certified: Azure Developer Associate**
- **Professional Scrum Master I — PSM I**
