

Kristine Stanley

Staff / Senior Ruby on Rails Engineer

Coaldale, CO 81222 | kristine.stanley.dev@outlook.com | +1 (786) 949-7561 | <https://www.linkedin.com/in/kristine-stanley-341688411>

PROFESSIONAL SUMMARY

Staff/Senior Ruby on Rails Engineer with 11+ years delivering secure SaaS, application security, connected mobility, device protection, and e-learning platforms using **Ruby 2.0–3.4, Rails 4–8, PostgreSQL, Redis, Sidekiq, Kafka, AWS, and Kubernetes**, providing architecture leadership, legacy modernization, API design, performance tuning, production reliability, and measurable business value across high-volume enterprise systems.

SKILLS

- **Languages:** Ruby, SQL, JavaScript, TypeScript, Python, Bash, HTML5, CSS3
- **Ruby and Rails:** Ruby 2.0–3.4, Rails 4–8, Active Record, Active Job, Action Cable, Hotwire, Turbo, Stimulus, Rake, Bundler, Rack, Puma
- **Backend Development:** REST APIs, GraphQL, JSON:API, webhooks, background processing, API versioning, service objects, form objects, serializers, policy objects
- **Frontend Technologies:** React, TypeScript, JavaScript, Hotwire, Turbo Frames, Stimulus, Bootstrap, Tailwind CSS, responsive web applications
- **Architecture:** Modular monoliths, microservices, service-oriented architecture, event-driven systems, domain-driven design, clean architecture, multi-tenant SaaS
- **Databases and Caching:** PostgreSQL, MySQL, SQL Server, DynamoDB, Redis, Elasticsearch, database indexing, query optimization, partitioning, read replicas
- **Background Processing:** Sidekiq, Active Job, Resque, delayed_job, RabbitMQ, Apache Kafka, AWS SQS, dead-letter queues, scheduled jobs
- **Cloud Platforms:** AWS EC2, ECS, EKS, RDS, S3, Lambda, CloudFront, ElastiCache, SQS, SNS, CloudWatch, Azure App Service
- **DevOps:** Docker, Kubernetes, Helm, Terraform, GitHub Actions, GitLab CI/CD, Jenkins, CircleCI, Linux, Nginx, Heroku
- **Testing:** RSpec, Minitest, Capybara, FactoryBot, WebMock, VCR, SimpleCov, Pact, Cypress, Selenium, contract testing, performance testing
- **Monitoring:** Datadog, New Relic, Sentry, OpenTelemetry, Prometheus, Grafana, ELK Stack, CloudWatch, structured logging
- **Security:** OAuth 2.0, OpenID Connect, JWT, Devise, Pundit, CanCanCan, RBAC, OWASP, Brakeman, Bundler Audit, secrets management
- **Engineering Leadership:** Architecture reviews, technical roadmaps, ADRs, code reviews, mentoring, Agile delivery, incident response, stakeholder collaboration

EXPERIENCE

Veracode Systems Inc — Senior Software Engineer

Remote/ Full time

April 2021 – May 2026

Somerville, MA

- Architected and delivered enterprise application-security services using **Ruby 2.7–3.4 and Rails 6–8**, supporting multi-tenant scan orchestration, policy management, findings analysis, and secure customer integrations.
- Modernized legacy Rails modules by extracting domain services, background workers, and versioned APIs, reducing coupling while preserving compatibility with established enterprise workflows.
- Improved average API response time by **43%** through Active Record query optimization, selective eager loading, Redis caching, database indexing, and removal of repeated authorization checks.
- Resolved recurring production memory exhaustion caused by oversized Sidekiq batches, retained objects, and unbounded job retries by introducing batch limits, retry policies, and heap profiling.

- Designed asynchronous processing with **Sidekiq, Redis, Kafka, and AWS SQS** to coordinate security scans, result enrichment, notifications, and integration callbacks without blocking web requests.
- Upgraded older Rails applications through staged framework and dependency migrations, replacing deprecated APIs, strengthening test coverage, and validating behavior through controlled production rollouts.
- Built secure **REST and GraphQL APIs** with OAuth 2.0, OpenID Connect, RBAC, request validation, rate limiting, and audit logging for enterprise security and compliance requirements.
- Optimized PostgreSQL workloads by redesigning indexes, eliminating N+1 queries, introducing bulk operations, and separating long-running reporting queries from transactional traffic.
- Deployed containerized Rails services through **Docker, Kubernetes, Helm, Terraform, and GitHub Actions**, using health checks, autoscaling, canary releases, and automated rollback controls.
- Led architecture reviews, production incident investigations, technical planning, and developer mentoring while partnering with product, security, QA, and SRE teams across distributed programs.

Cubic Telecom USA — Software Engineer

Remote/ Full time

January 2019 – April 2021

San Diego, CA

- Developed connected-vehicle and IoT platform services using **Ruby 2.4–2.7 and Rails 5.1–6.0**, supporting device activation, subscription management, carrier integration, and telemetry workflows.
- Designed scalable Rails APIs and service objects that normalized requests from automotive manufacturers, mobile network operators, billing systems, and internal operations platforms.
- Increased provisioning throughput by **36%** through Sidekiq concurrency tuning, database batching, Redis-based reference caching, and removal of synchronous carrier calls from request paths.
- Eliminated duplicate subscription activations caused by retry storms and delayed partner responses by implementing idempotency keys, state-machine safeguards, and replay-safe commands.
- Built event-driven workflows using **Kafka, RabbitMQ, and Sidekiq**, including retry strategies, dead-letter handling, message deduplication, and operational dashboards.
- Improved PostgreSQL and Redis performance by adding targeted indexes, reducing lock contention, consolidating repeated queries, and establishing predictable cache-expiration policies.
- Created secure REST APIs, webhooks, and carrier adapters with OAuth 2.0, request signing, rate limiting, schema validation, and detailed partner-facing error responses.
- Containerized Rails services with Docker and deployed them through Kubernetes-based pipelines, adding readiness probes, resource limits, environment isolation, and rolling upgrades.
- Collaborated with product managers, SREs, telecom specialists, and QA engineers to estimate features, investigate incidents, review code, and coordinate releases across global programs.

Asurion — Software Developer

Remote/ Full time

January 2017 – December 2018

Nashville, TN

- Developed device-protection and customer-service applications using **Ruby 2.3–2.5 and Rails 4.2–5.1**, supporting claims, eligibility, fulfillment, repair, and notification workflows.
- Implemented versioned REST APIs and integration adapters for customer portals, insurance systems, inventory platforms, payment services, and third-party fulfillment providers.
- Reduced average claims-processing time by **29%** through parallel validation, Redis caching, optimized database access, and asynchronous execution of noncritical notification tasks.
- Resolved an intermittent double-fulfillment production defect caused by concurrent retries and non-atomic status changes by adding row locking, idempotency controls, and explicit workflow states.
- Built background-processing pipelines with **Sidekiq, Active Job, RabbitMQ, and Redis**, including scheduled processing, retry limits, failure alerts, and poison-message isolation.
- Modernized older Rails controllers and callback-heavy models by introducing service objects, form objects, policies, and smaller domain-focused components with clearer responsibilities.
- Expanded automated coverage with RSpec, FactoryBot, Capybara, WebMock, and integration tests while adding CI quality gates for security scanning and regression prevention.

- Partnered with business analysts, customer-support teams, and senior engineers to refine requirements, troubleshoot production issues, review code, and deliver dependable releases.

Rustici Software — Junior Software Developer

Hybrid/ Full time

June 2015 – December 2016

Nashville, TN

- Developed e-learning and training-platform features using **Ruby 2.0–2.3 and Rails 4.0–4.2**, supporting content import, course launches, activity tracking, and customer reporting.
- Created Rails controllers, models, background jobs, and REST endpoints for SCORM and xAPI workflows while maintaining compatibility with varied learning-management systems.
- Modernized legacy application components by extracting reusable services, simplifying callback-heavy models, and replacing tightly coupled code with testable domain logic.
- Investigated course-import failures caused by malformed manifests, invalid encodings, oversized archives, and inconsistent timestamps, then implemented defensive validation and actionable errors.
- Improved PostgreSQL and MySQL performance by adding indexes, reducing repeated queries, introducing pagination, and caching frequently accessed course metadata with Redis.
- Added RSpec coverage, FactoryBot fixtures, Capybara feature tests, and automated CI checks that increased confidence when releasing fixes across shared application modules.
- Worked closely with senior engineers and customer-support specialists to reproduce production problems, review code, document solutions, and deliver maintainable customer-facing improvements.

EDUCATION

Tennessee State University — Bachelor's Degree in Computer Science

Sep 2011 – May 2015

CERTIFICATION

- **AWS Certified Developer – Associate**
- **Certified Kubernetes Application Developer — CKAD**
- **HashiCorp Certified: Terraform Associate**
