PROFESSIONAL SUMMARY

Staff Software Engineer with **Java 8–21** and **Kotlin 1.4–2.0** expertise across SaaS, property technology, nonprofit CRM, civic-tech, and managed-services platforms, delivering scalable **Spring Boot 2.x–3.x**, Android, REST, Kafka, PostgreSQL, MongoDB, AWS, Docker, and CI/CD systems. Experienced in modernizing legacy Java services, resolving production defects, improving API reliability, mentoring engineers, and building secure cloud-native features that reduce operational risk while improving release speed, performance, and maintainability. Strong background in system design, code review, unit testing, observability, and Agile delivery from architecture through production support.

TECH SKILLS

- ❖ **Languages:** Java 8–21, Kotlin 1.4–2.0, SQL, JavaScript, TypeScript
- ❖ **Backend:** Spring Boot 2.x–3.x, Spring MVC, Spring Security, Hibernate/JPA, REST APIs, GraphQL, Microservices
- ❖ **Messaging & Integration:** Apache Kafka 2.x–3.x, RabbitMQ, REST, Webhooks, Event-Driven Architecture
- ❖ **Databases:** PostgreSQL 11–16, MySQL, MongoDB 4.x–7.x, Redis, DynamoDB
- ❖ **Cloud & DevOps:** AWS, Docker, Kubernetes, GitHub Actions, Jenkins, Terraform, CI/CD, Linux
- ❖ **Testing:** JUnit 4/5, Mockito, Testcontainers, Spring Boot Test, Integration Testing, Unit Testing
- ❖ **Architecture:** Domain-Driven Design, Clean Architecture, Distributed Systems, API Design, Observability, Agile/Scrum

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Delivered enterprise SaaS platform improvements using **Java 17–21**, **Kotlin 1.7–2.0**, and **Spring Boot 3.x**, designing resilient microservices that supported secure customer workflows and reduced API latency by **23%**.
- ❖ Led migration from older **Spring Boot 2.x** services to **Spring Boot 3.x** with Jakarta namespace updates, dependency remediation, test refactoring, and phased rollout that reduced upgrade risk by **18%**.
- ❖ Implemented new workflow automation features using **Kotlin**, Kafka, PostgreSQL, and MongoDB, allowing internal operations teams to process customer events faster while improving throughput by **27%**.
- ❖ Resolved recurring production errors caused by duplicate event consumption by adding Kafka idempotency keys, retry backoff, and dead-letter topics, reducing failed message reprocessing by **31%**.
- ❖ Improved system observability by adding structured logs, OpenTelemetry tracing, service dashboards, and alert thresholds that helped engineers identify defects before customers reported issues.

- ❖ Refactored legacy Java modules into smaller domain services with clearer boundaries, improving maintainability and reducing regression defects during release testing by **22%**.
- ❖ Designed secure REST APIs with **Spring Security 6.x**, OAuth2, request validation, and role-based access controls for customer-facing platform features.
- ❖ Partnered with product managers and QA engineers to convert business requirements into technical designs, acceptance criteria, integration tests, and reliable release plans.
- ❖ Optimized PostgreSQL queries, indexes, and transaction boundaries for high-volume reporting endpoints, reducing slow query incidents by **26%** during peak usage.
- ❖ Mentored backend engineers through code reviews, architecture sessions, and debugging support, helping the team improve Java/Kotlin quality and delivery consistency.
- ❖ Built CI/CD quality gates with GitHub Actions, Docker image validation, unit tests, integration tests, and environment-specific configuration checks.
- ❖ Supported production incidents by reviewing logs, tracing API calls, reproducing defects locally, and delivering safe fixes without disrupting active customer workflows.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Built property-management SaaS features using **Java 11–17**, **Kotlin 1.4–1.6**, **Spring Boot 2.x**, PostgreSQL, Kafka, Docker, and Kubernetes for payment, leasing, and tenant-service workflows.
- ❖ Migrated legacy Java services from older Spring MVC patterns into modern **Spring Boot 2.x** services, improving deployment consistency and reducing service maintenance effort by **24%**.
- ❖ Implemented new Kotlin-based billing and notification features with Kafka events, transactional outbox logic, and retry handling that improved message reliability by **29%**.
- ❖ Fixed production defects where payment status updates were delayed under heavy load by redesigning queue processing, database locking, and retry scheduling.
- ❖ Improved PostgreSQL performance by rewriting complex joins, adding composite indexes, and separating read-heavy endpoints, reducing dashboard response time by **21%**.
- ❖ Created reusable API validation and error-handling patterns across Java services, helping frontend teams receive cleaner responses and reducing support tickets by **17%**.
- ❖ Expanded automated testing with **JUnit 5**, Mockito, Testcontainers, and Spring Boot integration tests to catch contract issues before staging deployments.
- ❖ Collaborated with DevOps engineers to improve Docker builds, Kubernetes rollout checks, environment variables, and deployment rollback behavior.
- ❖ Reviewed pull requests for architecture quality, concurrency safety, database efficiency, and long-term maintainability across multiple backend teams.
- ❖ Supported Agile delivery by breaking large product initiatives into practical backend milestones, technical tasks, migration steps, and production release notes.

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Developed nonprofit CRM and donation-management features using **Java 8**, **Spring Boot 1.5–2.x**, Hibernate, REST APIs, SQL Server, PostgreSQL, and AWS services.

- ❖ Helped migrate monolithic Java components into service-oriented modules, improving deployment flexibility and reducing release coordination issues by **19%**.
- ❖ Implemented donor search, reporting, and campaign-management enhancements with optimized API contracts that improved user workflow completion by **16%**.
- ❖ Resolved data synchronization bugs between CRM records and reporting services by adding validation rules, reconciliation jobs, and safer transaction handling.
- ❖ Improved application reliability by adding unit tests, API integration tests, and regression coverage around payment, donor, and campaign modules.
- ❖ Refactored Hibernate mappings and lazy-loading behavior to remove N+1 query issues that caused slow nonprofit reporting screens during large campaigns.
- ❖ Integrated AWS-based storage and background processing for document and import workflows, improving batch processing stability by **22%**.
- ❖ Worked closely with QA and product owners to investigate production defects, reproduce edge cases, and release fixes through controlled deployment windows.
- ❖ Participated in architecture reviews, sprint planning, and peer mentoring while improving Java coding standards and maintainability across the team.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Built civic-technology platform features using **Java 8**, Spring MVC, early **Spring Boot 1.x**, Hibernate, PostgreSQL, REST APIs, Jenkins, and AWS EC2.
- ❖ Implemented government communication and public-record workflow enhancements that improved internal processing speed by **15%** for high-volume administrative users.
- ❖ Resolved memory and timeout issues in Java batch jobs by optimizing database pagination, stream handling, and scheduled task execution patterns.
- ❖ Modernized older servlet and JSP-based modules into cleaner Spring MVC services, reducing manual maintenance effort and improving release confidence by **18%**.
- ❖ Created REST endpoints for citizen-facing services with validation, authentication checks, structured error responses, and consistent API documentation.
- ❖ Improved test coverage with **JUnit 4**, Mockito, and integration test scenarios around document submission, notification, and search workflows.
- ❖ Worked with infrastructure teams to troubleshoot deployment failures, Jenkins build errors, environment drift, and missing configuration values across environments.
- ❖ Supported Agile ceremonies, code reviews, bug triage, and release validation while building stronger backend ownership across Java service components.

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Supported managed-services applications using **Java 7–8**, Spring MVC, JSP, jQuery, MySQL, Maven, and JUnit while learning production-grade software delivery.
- ❖ Fixed customer portal bugs related to form validation, session handling, and inconsistent database records, reducing repeated support escalations by **12%**.

- ❖ Assisted senior engineers with small Java feature enhancements, SQL query updates, and backend maintenance tasks across internal service-management tools.
- ❖ Improved legacy code quality by adding basic unit tests, cleaning duplicated logic, and documenting setup steps for local development environments.
- ❖ Participated in daily Agile discussions, QA handoffs, and production issue reviews to build practical experience in debugging and reliable delivery.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
