

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522

<https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Detail-driven and performance-focused Senior Software Engineer with 9+ years of hands-on experience delivering scalable backend and fullstack applications. Adept in Java Enterprise and Ruby development with a strong focus on code quality, database design, and cloud deployment. Proven ability to navigate large codebases, optimize SQL/NoSQL operations, and enhance systems under high-demand conditions. Seeking a role that values precision, ownership, and end-to-end delivery excellence.

Technical Skills

- ❖ **Languages:** Java (8–17), Ruby, JavaScript (ES6+), TypeScript, Python, PHP
- ❖ **Frameworks:** Spring Boot, JEE, Ruby on Rails, Node.js, Express, React, Next.js
- ❖ **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis
- ❖ **DevOps & Cloud:** Docker, Kubernetes, AWS (Lambda, EC2, RDS, S3, ECS), GCP (App Engine, Firestore, Cloud SQL)
- ❖ **Tools:** Git, GitHub Actions, GitLab CI/CD, Jira, Jenkins, SonarQube, Postman, VS Code
- ❖ **Other:** REST APIs, GraphQL, WebSockets, NoSQL design, Linux CLI (grep, ssh, sed), TDD, Agile, SCRUM

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- Led architecture and backend development using Java 17 and Spring Boot for distributed enterprise systems involving authentication, caching, and event-driven design.
- Designed robust PostgreSQL data schemas and optimized over 20+ complex queries to reduce latency and eliminate deadlocks under concurrent loads.
- Integrated Ruby microservices with Java core applications to ensure legacy compatibility while enabling gradual migration and high resilience.
- Maintained Linux servers with CLI tools for process monitoring, log inspection, and SSH-based deployment automation across multiple environments.
- Refactored monolithic modules into microservices, reducing deployment errors by 40% while achieving full CI/CD coverage with GitHub Actions.
- Developed backend health diagnostics and logging middleware to standardize observability using OpenTelemetry and ELK stack.
- Actively mentored junior engineers through code reviews and architecture deep-dives, enhancing onboarding time and reducing regressions.
- Collaborated with product and QA teams to ensure high test coverage, delivering biweekly sprint features with over 98% on-time completion.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- Delivered scalable Java EE applications with RESTful APIs and PostgreSQL integrations, supporting real-time dashboards for financial analytics platforms.
- Worked across a large shared codebase with multiple services, tracing interdependencies and ensuring safe, modular deployments in CI pipelines.
- Designed and documented GraphQL gateways aggregating data from SQL and NoSQL sources, improving frontend response time by 30%.
- Created automated test suites with JUnit and Selenium, increasing test reliability and cutting manual testing effort by 50%.
- Integrated AWS S3 for secure storage, configured IAM roles, and built a fault-tolerant asset serving pipeline using CloudFront and Lambda@Edge.
- Participated in system monitoring with Prometheus and Grafana, identifying performance bottlenecks in containerized Java apps.
- Deployed applications using Docker Compose and Helm charts in Kubernetes clusters across staging and production.
- Contributed to knowledge sharing sessions and internal training on Linux CLI usage, Git best practices, and GCP serverless app hosting.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- Delivered fullstack solutions using Java 11 backend and React.js frontend with a focus on healthcare and logistics platforms.
- Implemented caching strategies using Redis to minimize redundant SQL queries and handle over 100k concurrent sessions during peak operations.
- Migrated large datasets from MySQL to PostgreSQL, transforming schema structure and crafting migration scripts with rollback mechanisms.
- Created shell scripts for server-side automation including backup rotation, log archiving, and service health checks on Ubuntu servers.
- Integrated Git workflows with GitLab CI to enforce code quality gates and streamline testing across feature branches.
- Collaborated with DevOps on deploying REST APIs and serverless functions to AWS Lambda with secure endpoints via API Gateway.
- Enabled third-party integrations via OAuth and Webhooks, ensuring reliable communication with CRMs and payment gateways.
- Conducted thorough code reviews, ensuring alignment with SOLID principles, DRY coding standards, and modular architecture.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- Developed Ruby on Rails APIs serving frontend admin portals with PostgreSQL and Redis for stateful user tracking and analytics.
- Maintained Java backends for B2B workflow systems, enabling document processing with real-time validation and queue-based task dispatch.
- Designed internal CLI tools for team operations in Linux, including log parsers and deployment helpers using `bash`, `grep`, and `ssh`.
- Supported large code refactors across multiple teams, building tools to trace call chains and surface circular dependencies.
- Participated in full lifecycle of agile iterations, including requirement grooming, estimation, and retrospectives.
- Implemented and maintained Git branching strategies, pull request templates, and merge conventions for team consistency.
- Built automated SQL audit reports with triggers to capture business-critical events for stakeholder traceability.
- Managed cross-environment deployments, ensuring rollback plans and post-deployment monitoring using shell scripts.

Projects

- ✓ **CrossCloud DataSync Platform**
Built a polyglot syncing engine (Java + Ruby) for a fintech client, bridging legacy APIs and modern cloud-based endpoints with PostgreSQL and MongoDB under 2-second sync SLA.
- ✓ **Enterprise Scheduler API**
Developed a Java microservice with complex cron-based logic for orchestrating jobs across departments. Used Redis queues, Spring Quartz, and PostgreSQL event logging.
- ✓ **Secure Medical Report Portal**
Created a HIPAA-compliant web app with Ruby on Rails backend and encrypted file storage on AWS S3. Used PostgreSQL and PDFkit for dynamic patient document generation.

Certifications

- ✓ AWS Certified Solutions Architect – Associate
- ✓ Google Cloud Certified – Associate Cloud Engineer
- ✓ Oracle Certified Professional, Java SE 11 Developer
- ✓ PostgreSQL for Developers (Coursera)
- ✓ Git and Linux Command Line Mastery (Udemy)

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
