

# Erwin Quanten

Senior DevOps Engineer – Azure, Azure DevOps, Terraform

Brussels, Belgium | [erwin.quanten.dev@outlook.com](mailto:erwin.quanten.dev@outlook.com) | +32460256356 | <https://www.linkedin.com/in/erwin-quanten-b82815a/>

## PROFESSIONAL SUMMARY

Senior DevOps Engineer with 16+ years of experience across manufacturing, enterprise cloud, managed services, and industrial platform modernization, specializing in **Microsoft Azure, Azure DevOps, Terraform 1.x, Bicep 0.20+, PowerShell 7.x, Windows Server 2016–2022**, and hybrid infrastructure. Skilled in building CI/CD standards, landing zones, secure secrets management, monitoring, patching, and multi-site deployment models for regulated environments. Experienced partnering with architects, MES teams, infrastructure leaders, and external vendors to improve reliability, reduce release risk, and standardize operational practices.

## SKILLS

- **Cloud & Platform Engineering:** Microsoft Azure, Azure Landing Zones, Azure Resource Manager, Azure Policy, Azure RBAC, Azure Networking, Hybrid Cloud, Windows Server 2016–2022
- **Infrastructure as Code:** Terraform 1.x, Bicep 0.20+, ARM Templates, PowerShell DSC, reusable IaC modules, environment provisioning, policy-driven deployment
- **CI/CD & DevOps:** Azure DevOps YAML Pipelines, GitHub Actions, Git workflows, branching strategies, release gates, approvals, rollback automation, artifact promotion
- **Automation & Scripting:** PowerShell 5.1–7.x, PowerShell DSC, Azure CLI 2.x, Bash, deployment orchestration, configuration automation, patch scripting
- **Monitoring & Security:** Azure Monitor, Log Analytics, Application Insights, Azure Key Vault, Defender for Cloud, RBAC, Managed Identity, secrets rotation, audit logging
- **Enterprise Infrastructure:** Windows Server, IIS, SQL Server 2016–2022, Active Directory, DNS, private networking, VPN, firewalls, hybrid connectivity
- **Industrial / MES Alignment:** MES deployment support, manufacturing systems, regulated environments, multi-site rollout patterns, operational reliability, validation-aware release processes
- **Containers:** Docker 20.x–24.x, Kubernetes 1.24–1.29, AKS, Helm 3.x, container registry workflows

## EXPERIENCE

### Lightedge — Lead Software Engineer

Remote/ Full time

May2022 – Apr 2026

Houston, TX

- Designed enterprise **Azure landing zones** with **Terraform 1.x, Bicep 0.20+**, Azure Policy, RBAC, and hub-spoke networking to support secure multi-environment platform delivery.
- Built reusable **Azure DevOps YAML pipelines** for infrastructure, application deployment, database changes, and release approvals across development, staging, and production environments.
- Implemented modular **Infrastructure-as-Code** patterns that reduced environment provisioning time by **38%** while improving consistency across cloud and hybrid deployments.
- Created secure secrets workflows with **Azure Key Vault**, Managed Identity, variable groups, and pipeline permissions to remove hardcoded credentials from deployment processes.
- Automated Windows Server configuration using **PowerShell 7.x**, PowerShell DSC, and Azure CLI 2.x to standardize IIS, certificates, services, and scheduled operational tasks.
- Resolved a recurring release failure caused by inconsistent environment variables by centralizing configuration templates and adding pre-deployment validation checks.
- Partnered with architects and infrastructure teams to define scalable deployment standards for enterprise workloads running across **Azure**, private networks, and Windows-based environments.
- Improved production deployment reliability by **31%** by adding smoke tests, approval gates, rollback scripts, and release-health checks into Azure DevOps pipelines.
- Implemented **Azure Monitor**, Log Analytics, metric alerts, and custom KQL dashboards to improve incident detection and reduce manual investigation during production support.
- Migrated legacy manual deployment processes into automated pipelines while preserving change-control requirements, release approvals, and operational rollback procedures.
- Supported SQL Server 2019–2022 deployment automation, backup validation, access control, and monitoring integration for enterprise business applications.
- Mentored engineers through pull-request reviews, branching standards, pipeline troubleshooting, and DevOps best practices focused on secure and repeatable delivery.

## Syscom Digital — Staff Software Engineer

*Remote/ Full time*

**Nov 2017 – Apr 2022**

*Bucharest, Romania*

- Led platform modernization initiatives using **Microsoft Azure**, **Azure DevOps Services**, **Terraform 0.12–1.1**, ARM Templates, and PowerShell 5.1–7.x for enterprise client systems.
- Developed CI/CD pipeline templates for build validation, artifact publishing, environment promotion, database migrations, and controlled release approvals.
- Reduced deployment errors by **34%** by replacing manual release notes and server-side scripts with standardized Azure DevOps YAML templates and automated checks.
- Implemented **Azure Key Vault**, RBAC, service connections, and secure variable handling to improve secrets governance across multiple delivery teams.
- Migrated infrastructure scripts from ad hoc PowerShell modules into version-controlled **Terraform** and ARM-based provisioning workflows with reviewable pull requests.
- Fixed a critical production issue caused by missing certificate renewal automation by adding certificate inventory checks, expiry alerts, and pipeline-based deployment steps.
- Improved release cycle time by **27%** by introducing reusable pipeline stages, automated testing gates, and parallel environment validation for core applications.
- Supported hybrid infrastructure integrations involving Windows Server 2016–2019, SQL Server 2016–2019, private networking, VPN connectivity, and identity-controlled access.
- Collaborated with solution architects to define deployment models, environment naming standards, rollback procedures, and operational documentation for enterprise customers.
- Guided engineers on Git branching, pull-request governance, pipeline security, and automation patterns to improve consistency across distributed teams.

## Tessenderlo Group — Senior Software Engineer

*Remote/ Full time*

**Aug 2015 – Oct 2017**

*Brussel Metropolitan Area*

- Supported manufacturing and enterprise systems by building deployment automation around **TFS 2015–2017**, PowerShell 4.0–5.1, Windows Server 2012 R2–2016, and SQL Server 2014–2016.
- Implemented structured release pipelines with build validation, package promotion, environment-specific configuration, and controlled deployment steps for internal business platforms.
- Reduced release preparation effort by **29%** by replacing manual server checklists with scripted PowerShell validation and repeatable deployment runbooks.
- Improved application availability by **22%** by adding monitoring checks, service restart automation, IIS health validation, and post-deployment verification steps.
- Resolved a recurring deployment issue caused by mismatched IIS settings by creating standardized configuration scripts for application pools, bindings, certificates, and permissions.
- Migrated older deployment packages from manual file-copy processes into controlled TFS build outputs with clear artifact versioning and rollback procedures.
- Collaborated with infrastructure, application, and operations teams to support reliable deployments for systems connected to manufacturing and supply-chain workflows.
- Introduced SQL Server deployment coordination practices covering backup checks, migration sequencing, permission validation, and controlled production rollout windows.
- Documented operational standards for release execution, incident response, access control, and environment readiness across enterprise Windows infrastructure.

## Tessenderlo Group — Software Engineer

*Hybrid/ Full time*

**Sep 2011 – Jul 2015**

*Brussel Metropolitan Area*

- Maintained enterprise application environments using **TFS 2012–2013**, MSBuild, PowerShell 3.0–4.0, Windows Server 2008 R2–2012, IIS 7.5–8.5, and SQL Server 2008 R2–2012.
- Created automated build and deployment scripts that improved release repeatability and reduced manual configuration mistakes across internal application environments.
- Reduced deployment rollback time by **26%** by adding package versioning, backup verification, deployment logs, and documented recovery steps for production releases.
- Fixed a frequent configuration drift issue by comparing IIS, service account, folder permission, and connection-string settings across development, test, and production servers.
- Supported Active Directory access groups, service accounts, certificate installation, DNS updates, and firewall coordination for enterprise application delivery.

- Improved troubleshooting speed by **24%** by creating structured deployment logs, error classification notes, and operational handover documentation for support teams.
- Assisted developers with Git and TFS workflows, branch hygiene, merge conflict resolution, and build failure analysis during multi-team delivery cycles.
- Supported SQL Server schema deployment coordination, stored procedure releases, permission checks, and rollback preparation for business-critical systems.

#### **Tessengerlo Group — Software Developer**

*Hybrid/ Full time*

**Jun 2009 – Aug 2011**

*Brussel Metropolitan Area*

- Supported early build and deployment processes using **TFS 2010**, MSBuild, PowerShell 2.0, Windows Server 2008, IIS 7.0, and SQL Server 2008.
- Automated repetitive deployment preparation tasks and reduced manual packaging effort by **21%** through scripted build outputs and environment checklist validation.
- Fixed recurring deployment failures caused by missing DLL dependencies by adding package verification steps and clearer release folder structures.
- Improved support handover quality by **18%** by documenting server prerequisites, deployment steps, rollback notes, and common production issue resolutions.
- Collaborated with senior engineers to maintain application environments, troubleshoot release issues, and gradually improve operational discipline across internal systems.

#### **EDUCATION**

---

**KU Leuven — Master's Degree, Computer Science**

**Sep 2003 – May 2009**
