SUMMARY

Senior Frontend Engineer with 10+ years of experience building enterprise SaaS, fintech, healthcare, eCommerce, and operational backoffice platforms using **React 16.x–18.x**, **TypeScript 3.x–5.x**, **React Query 3.x–5.x**, **Redux Toolkit 1.x–2.x**, **Zustand 4.x**, **OpenAPI-generated clients**, **OIDC/JWT authentication**, **RBAC**, **WebSockets**, **MUI 4.x–5.x**, **Ant Design 3.x–5.x**, **SCSS/CSS Modules**, **Jest**, **React Testing Library**, **Docker**, and AI-assisted tools such as **GitHub Copilot**, **ChatGPT**, and **Cursor** to deliver secure, modular, high-performance interfaces with measurable improvements in maintainability, rendering behavior, and release quality.

SKILLS

- **Frontend:** **React 16.x–18.x**, **TypeScript 3.x–5.x**, JavaScript ES6+, React Hooks, Functional Components, SPA Architecture, Micro Frontend Concepts
- **State Management:** **React Query 3.x–5.x**, **Redux Toolkit 1.x–2.x**, Redux 4.x, Zustand 4.x, Context API, Async Data Flow
- **API Integration:** **OpenAPI-generated clients**, REST APIs, Axios, Fetch API, Swagger, Typed API Contracts, Error Normalization
- **Authentication & Security:** **OIDC**, **JWT**, Refresh Tokens, **RBAC**, Permission-Based UI, Route Guards, Secure Session Handling
- **UI & Styling:** **MUI 4.x–5.x**, **Ant Design 3.x–5.x**, **SCSS**, **CSS Modules**, styled-components, Responsive Design, Accessibility
- **Real-Time & i18n:** **WebSockets**, Live Updates, Reconnect Logic, i18next, Multi-Tenant UI, Locale-Aware Interfaces
- **Testing & Quality:** **Jest 24.x–29.x**, **React Testing Library 12.x–14.x**, Playwright 1.x, ESLint, Prettier, Unit Testing, Integration Testing
- **Build & DevOps:** Docker, Webpack 4.x–5.x, Vite 4.x–5.x, npm, Yarn, CI/CD, Docker-Based Frontend Builds
- **AI-Assisted Development:** **GitHub Copilot**, **ChatGPT**, **Cursor**, AI-assisted refactoring, test generation, architectural comparison

EXPERIENCE

Senior Software Engineer

Viaro Networks Inc.

June 2021 - October 2025

- Owned frontend architecture for enterprise **backoffice and partner operations platforms** using **React 17.x–18.x**, **TypeScript 4.x–5.x**, **React Query 3.x–5.x**, **Redux Toolkit 1.x–2.x**, and **Zustand 4.x** in a modular domain-driven codebase.
- Built reusable **MUI 5.x** and **Ant Design 5.x** component patterns for tables, filters, forms, drawers, and audit workflows, reducing duplicated UI logic by **32%** across admin modules.
- Integrated **OpenAPI-generated TypeScript clients** with React Query caching, optimistic updates, request cancellation, and typed error boundaries to make REST API usage safer and more predictable.
- Implemented **OIDC/JWT authentication** with refresh-token handling, silent session renewal, route guards, and tenant-aware authorization checks for secure internal and partner-facing access.
- Developed granular **role-based access control** screens that mapped backend permissions into React navigation, action buttons, and field-level UI rules without leaking unauthorized workflows.
- Delivered **WebSocket-driven live updates** for operational dashboards by adding reconnect logic, stale-event protection, and cache invalidation rules that improved real-time accuracy by **27%**.
- Resolved a production bug where expired JWT sessions triggered infinite API retries by centralizing token refresh state, queuing pending requests, and adding fallback logout handling.
- Optimized rendering behavior in complex data grids by applying memoized selectors, virtualized rows, lazy-loaded modules, and bundle splitting, improving initial dashboard load by **24%**.
- Migrated legacy class-based React screens into **functional components and hooks** while preserving business behavior, test coverage, and release stability during staged rollout cycles.
- Created scalable **SCSS/CSS Modules** conventions with shared design tokens, layout utilities, and accessibility rules so multiple teams could ship consistent enterprise UI features.
- Expanded test coverage with **Jest 27.x–29.x**, **React Testing Library 12.x–14.x**, and **Playwright 1.x**, focusing on authentication flows, RBAC edge cases, and async state transitions.

- Used **GitHub Copilot**, **ChatGPT**, and **Cursor** to accelerate refactoring, generate test scenarios, compare architectural options, and improve review quality without bypassing engineering judgment.

Software Engineer

ArnAmy, Inc.

August 2017 - May 2021

- Built multi-tenant SaaS admin applications with **React 16.x–17.x**, **TypeScript 3.x–4.x**, **Redux 4.x**, **Redux Toolkit 1.x**, **React Query 2.x–3.x**, and structured REST integrations.
- Designed modular frontend domains for customer management, billing workflows, reporting views, and internal operations, improving feature delivery consistency by **29%**.
- Implemented secure **JWT authentication** with guarded routes, permission-aware layouts, and API interceptor logic that reduced unauthorized UI access defects by **21%**.
- Created a typed API layer from Swagger/OpenAPI contracts and normalized backend errors into consistent form messages, toast alerts, and retryable user actions.
- Fixed a recurring race condition where fast filter changes returned stale table data by adding request cancellation, query keys, debounce logic, and cache synchronization.
- Migrated older Redux reducer patterns into **Redux Toolkit 1.x** slices with typed actions and selectors, reducing boilerplate while keeping business rules easy to trace.
- Implemented WebSocket notification panels for status changes, background job completion, and operational alerts with reconnect handling and duplicate-event filtering.
- Improved frontend performance by replacing heavy synchronous form validation with schema-driven async validation and memoized field groups, reducing form lag by **26%**.
- Built reusable **Material-UI 4.x** and **Ant Design 3.x–4.x** components for permissions, tables, modals, and complex forms used across several product modules.
- Added automated unit and integration coverage with **Jest 24.x–26.x**, **Enzyme**, and **React Testing Library**, targeting permission logic and API failure scenarios.
- Collaborated with backend, QA, and product teams to clarify API contracts, feature flags, tenant behavior, and release risks before implementation reached production.

Software Developer

Webiz Digital

December 2015 - July 2017

- Developed client-facing web applications and admin portals with **React 15.x**, **TypeScript 2.x**, **Redux 3.x**, **Webpack 2.x**, **Sass**, **Bootstrap 3.x**, and REST-based integrations.
 - Built reusable form, navigation, table, and modal components for eCommerce and service workflows, reducing repeated frontend implementation work by **23%**.
 - Implemented early React state-management patterns with Redux stores, action creators, selectors, and middleware to keep growing UI behavior predictable.
 - Resolved a checkout calculation bug caused by inconsistent client-side rounding by aligning validation rules with backend totals and adding regression tests.
 - Migrated jQuery-heavy interface sections into **React 15.x** components in staged releases, improving maintainability without forcing a risky full rewrite.
 - Improved page performance by optimizing Webpack bundles, compressing assets, removing unused dependencies, and deferring noncritical scripts for **18%** faster loads.
 - Built responsive layouts with **Sass**, reusable mixins, and Bootstrap grid conventions to support desktop, tablet, and mobile views across client projects.
 - Integrated REST endpoints for product search, user profiles, order history, and admin reporting with clear loading states, error states, and retry behavior.
 - Worked closely with designers and backend developers to translate business requirements into maintainable UI screens with realistic delivery estimates.
 - Added practical test coverage around reducers, utility functions, and major user flows using **Jest** and browser-based QA checklists during release cycles.
-

Junior Software Engineer

High Touch Technologies

August 2014 - November 2015

- Developed internal business web interfaces with **AngularJS 1.3–1.5**, **JavaScript**, **jQuery 1.x–2.x**, **Bootstrap 3.x**, **LESS/Sass**, and REST API integrations.
- Built dashboard widgets, searchable tables, customer forms, and reporting screens for operational users, reducing manual spreadsheet work by **17%**.
- Fixed layout and browser compatibility issues by standardizing CSS structure, reusable Bootstrap components, and cross-browser testing practices.
- Implemented client-side validation, reusable directives, and service-layer API calls that made AngularJS screens easier to maintain and extend.
- Resolved a data-refresh issue where users saw outdated records after edits by reloading scoped models and improving promise handling after successful saves.
- Improved page usability by adding loading states, inline validation messages, and clearer error feedback, reducing repeated support questions by **14%**.
- Supported migration of older static pages into structured **AngularJS 1.x** views while keeping existing backend routes and release processes stable.
- Used **Gulp**, **Grunt**, npm scripts, and browser debugging tools to streamline asset builds, minification, and frontend troubleshooting during releases.
- Collaborated with senior engineers to learn production code review discipline, REST integration patterns, accessibility basics, and maintainable UI structure.

EDUCATION

Bachelor's degree in Computer Science

University of Amsterdam

2010 - 2014
