

Erwin Quanten

Staff Software Engineer – .NET, React, Azure/AWS

Brussels, Belgium | erwin.quanten.dev@outlook.com | +32460256356 | <https://www.linkedin.com/in/erwin-quanten-b82815a/>

PROFESSIONAL SUMMARY

Staff Software Engineer with 16+ years of experience across **cloud hosting**, **enterprise SaaS**, **digital services**, and **manufacturing** industries, specializing in **C# 10-12**, **.NET 6-8**, **ASP.NET Core 6-8**, **React 17-18**, **TypeScript 4-5**, and Azure/AWS cloud platforms. Strong record designing secure APIs, modernizing legacy .NET systems, building scalable React applications, improving CI/CD delivery, and solving production issues around performance, authentication, database bottlenecks, and deployment reliability. Known for flexible end-to-end ownership across backend, frontend, DevOps, observability, and stakeholder-driven product delivery.

SKILLS

- **Backend:** C# 10-12, .NET 6-8, ASP.NET Core 6-8, .NET Core 2.1-3.1, .NET Framework 4.0-4.8, Web API, MVC, WCF, REST APIs, Microservices
- **Frontend:** React 17-18, React 15-16, TypeScript 4-5, JavaScript ES6+, Redux, React Query, HTML5, CSS3, Bootstrap, Material UI
- **Database:** SQL Server 2016-2022, PostgreSQL 13-16, Entity Framework Core 6-8, LINQ, Stored Procedures, Query Optimization
- **Cloud & DevOps:** Azure, AWS, Docker, Kubernetes, GitHub Actions, Azure DevOps, CI/CD, Terraform, Nginx, IIS
- **Architecture:** Clean Architecture, Domain-Driven Design, Microservices, Event-Driven Systems, API Versioning, Authentication, Authorization
- **Observability & Quality:** OpenTelemetry, Serilog, Application Insights, Unit Testing, Integration Testing, xUnit, Jest, Playwright, SonarQube

EXPERIENCE

Lightedge — Lead Software Engineer

Remote/ Full time

May2022 – Apr 2026

Houston, TX

- Led full-stack delivery for a **cloud hosting platform** using **C# 10-12**, **.NET 6-8**, **ASP.NET Core 6-8**, **React 18**, and **TypeScript 4-5** across customer portals, billing workflows, and infrastructure operations.
- Designed high-throughput **REST APIs** and background workers with **EF Core 6-8**, **SQL Server 2019-2022**, and **RabbitMQ 3.9-3.13**, reducing average request latency by **28%** through query tuning and async processing.
- Built reusable **React 18** component libraries with role-based screens, form validation, and API-driven state management to accelerate recurring portal feature delivery.
- Migrated legacy services from **.NET Core 3.1** to **.NET 6-8** by upgrading package dependencies, replacing deprecated middleware, and validating authentication flows with regression tests.
- Resolved a production memory leak caused by long-lived dependency scopes in hosted services by profiling allocations, fixing service lifetimes, and adding **OpenTelemetry** dashboards.
- Implemented new **multi-tenant access management** features with claims-based authorization, JWT validation, and audit logging for sensitive account, billing, and infrastructure actions.
- Improved CI/CD reliability with **GitHub Actions**, **Azure DevOps YAML**, Docker image scanning, environment approvals, and rollback steps, reducing failed deployments by **31%**.
- Partnered with product, support, and infrastructure teams to translate customer-impacting incidents into prioritized engineering fixes, keeping delivery flexible across frontend, backend, and DevOps needs.
- Optimized database-heavy dashboards by adding filtered indexes, projection-based queries, and cache invalidation rules, reducing report load time by **35%** for large customer accounts.
- Introduced structured logging with correlation IDs, distributed tracing, and alert thresholds so production errors could be isolated faster across API, worker, and frontend boundaries.
- Reviewed architecture decisions for service decomposition, API contracts, and React state boundaries while mentoring engineers on **clean architecture**, testing, and secure coding practices.
- Delivered customer-facing portal enhancements with realistic release planning, feature flags, and staged rollouts, allowing teams to ship new functionality without interrupting active users.

Syscom Digital — Staff Software Engineer

Remote/ Full time

Nov 2017 – Apr 2022

Bucharest, Romania

- Owned full-stack engineering for **digital transformation platforms** using **C# 7-10, .NET Core 2.1-3.1, .NET 5-6, React 16-17**, and **TypeScript 3-4**.
- Built modular **ASP.NET Core** APIs with dependency injection, validation middleware, Swagger documentation, and integration tests for finance, CRM, and workflow automation products.
- Migrated monolithic **.NET Framework 4.7** modules into **.NET Core 3.1** services, reducing deployment package size by **24%** and making releases easier to validate.
- Developed **React 16-17** dashboards with Redux, reusable table components, permission-aware routes, and typed API clients, improving internal user task completion by **18%**.
- Fixed recurring 500 errors caused by inconsistent null handling in service mapping layers by adding guard clauses, DTO validation, and contract tests around failing endpoints.
- Improved release quality with **Azure DevOps**, Dockerized builds, branch policies, and automated smoke tests, reducing post-release rollback incidents by **27%**.
- Implemented new approval workflows, notification services, and audit trails by combining **ASP.NET Core, SQL Server 2016-2019**, and message-based background processing.
- Reduced frontend bundle size through code splitting, lazy-loaded routes, dependency cleanup, and replacing duplicated UI helpers with shared components.
- Supported flexible delivery across architecture, feature development, production triage, and stakeholder demos, helping teams keep momentum during changing business priorities.
- Mentored engineers on API versioning, React component composition, unit testing, and pull-request quality so the codebase remained maintainable as product scope expanded.

Tessenderlo Group — Senior Software Engineer

Remote/ Full time

Aug 2015 – Oct 2017

Brussel Metropolitan Area

- Delivered enterprise applications for a **manufacturing and chemicals environment** using **C# 5-7, .NET Framework 4.5-4.7, ASP.NET MVC 5, Web API 2**, and **SQL Server 2014-2016**.
- Modernized older MVC screens into early SPA-style interfaces with **React 15-16**, jQuery interoperability, and Web API contracts where browser-based workflows required faster interactions.
- Reworked inventory and logistics APIs with cleaner service boundaries and stored procedure optimization, reducing slow transaction screens by **26%** for operations teams.
- Resolved authentication timeout issues in internal portals by improving forms authentication handling, session configuration, and server-side logging around expired user contexts.
- Built new shipment tracking and approval features with **ASP.NET MVC 5, Web API 2**, and SQL-backed audit logs to improve operational visibility across departments.
- Migrated legacy reporting modules from tightly coupled Web Forms pages to MVC-based views, lowering recurring UI defects by **19%** after release stabilization.
- Improved deployment repeatability with scripted configuration checks, database migration scripts, and environment-specific settings, reducing manual release mistakes by **23%**.
- Collaborated with plant operations, business analysts, and infrastructure teams to balance technical constraints with practical manufacturing workflow requirements.
- Reviewed code for maintainability, SQL performance, error handling, and security practices while guiding junior engineers through realistic enterprise delivery standards.

Tessenderlo Group — Software Engineer

Hybrid/ Full time

Sep 2011 – Jul 2015

Brussel Metropolitan Area

- Developed internal business applications for **manufacturing operations** using **C# 4-5, .NET Framework 4.0-4.5, ASP.NET MVC 3-5, Web API 2**, and **SQL Server 2008-2014**.
- Implemented order, inventory, and procurement modules with layered architecture, server-side validation, and reusable service classes to reduce duplicate business logic.
- Created REST-style API endpoints that later supported modern frontend integrations, improving separation between presentation logic and backend workflow processing.
- Fixed production defects around stale session data, incorrect SQL joins, and inconsistent validation rules by reproducing user flows and adding targeted regression tests.
- Migrated selected Web Forms workflows into **ASP.NET MVC** patterns, improving maintainability and reducing change effort by **20%** for recurring internal requests.

- Improved SQL query performance through index review, execution-plan analysis, and parameterized commands, reducing heavy report execution time by **29%**.
- Supported QA and release teams with deployment notes, rollback steps, and data validation scripts so changes moved safely through test and production environments.
- Worked flexibly across backend services, database fixes, UI adjustments, and user support, helping business users receive practical improvements without long delays.

Tessenderlo Group — Software Developer

Hybrid/ Full time

Jun 2009 – Aug 2011

Brussel Metropolitan Area

- Built and maintained internal enterprise tools using **C# 3-4, .NET Framework 3.5-4.0, ASP.NET Web Forms, WCF, ADO.NET, and SQL Server 2008**.
- Resolved recurring application errors caused by missing input validation and fragile database calls by adding server-side checks, safer parameters, and clearer error messages.
- Improved report generation and data export workflows by optimizing SQL queries and caching reference data, reducing manual operations effort by **18%**.
- Supported migration preparation from classic Web Forms patterns toward more structured service layers, making future MVC and API modernization easier for the team.
- Collaborated with senior engineers, business users, and support staff to deliver fixes, small features, and documentation across finance, logistics, and operations systems.

EDUCATION

KU Leuven — Master's Degree, Computer Science

Sep 2003 – May 2009
