

Erwin Quanten

Staff Software Engineer – Java, Spring Boot, Angular, AWS

Brussels, Belgium | erwin.quanten.dev@outlook.com | +32460256356 | <https://www.linkedin.com/in/erwin-quanten-b82815a/>

PROFESSIONAL SUMMARY

Staff Software Engineer specializing in **Java 8–21**, **Spring Boot 1.5–3.3**, and **Angular 2–18** across cloud, SaaS, telecom, and industrial enterprise platforms. Strong background in modernizing legacy monoliths into secure microservices, building responsive Angular applications, improving API reliability, and leading production migrations with measurable business impact. Experienced with **AWS**, **Docker**, **Kubernetes**, **PostgreSQL**, **Kafka**, CI/CD, observability, and performance tuning, with a practical focus on reducing incidents, accelerating releases, mentoring engineers, and delivering maintainable systems for distributed teams.

SKILLS

- **Languages:** Java 8–21, TypeScript 2.x–5.x, JavaScript ES6+, SQL, Bash
- **Backend:** Spring Boot 1.5–3.3, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, Microservices, Maven, Gradle
- **Frontend:** Angular 2–18, RxJS 5–7, NgRx 6–17, Angular Material, Reactive Forms, HTML5, CSS3, SCSS
- **Cloud & DevOps:** AWS, EC2, ECS, S3, RDS, CloudWatch, Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI, Terraform
- **Databases & Messaging:** PostgreSQL, MySQL, Oracle, MongoDB, Redis, Kafka, RabbitMQ
- **Testing & Quality:** JUnit 4–5, Mockito, Cypress, Jasmine, Karma, SonarQube, OWASP, API Contract Testing
- **Architecture:** Microservices, Event-Driven Architecture, Domain-Driven Design, RESTful API Design, CI/CD, Observability, Legacy Modernization

EXPERIENCE

Lightedge — Lead Software Engineer

Remote/ Full time

May2022 – Apr 2026

Houston, TX

- Led enterprise cloud platform development using **Java 17–21**, **Spring Boot 3.x**, and **Angular 15–18**, delivering secure customer portals for cloud infrastructure, billing, access control, and managed service operations.
- Designed and implemented **Spring Boot microservices** with REST APIs, Spring Security, OAuth2, and PostgreSQL, improving backend response consistency by **23%** during high-volume customer activity.
- Modernized Angular modules from older component structures into standalone components, lazy-loaded routes, and typed reactive forms, reducing frontend bundle size by **18%** and improving page load behavior.
- Resolved a recurring production issue where stale JWT refresh tokens caused random session failures, fixing the root cause through token rotation, Redis-backed invalidation, and stronger audit logging.
- Migrated several services from **Java 11** and Spring Boot 2.x into **Java 17** and Spring Boot 3.x, handling Jakarta namespace changes, dependency conflicts, and regression testing across shared libraries.
- Built a role-based customer administration feature in **Angular 16** with route guards, permission directives, and reusable UI components, making access management easier for support and operations teams.
- Improved CI/CD pipelines with GitHub Actions, Docker image scanning, Maven caching, and staged deployments, reducing release preparation time by **26%** while keeping rollback steps clear.
- Implemented observability improvements with CloudWatch dashboards, structured JSON logs, trace IDs, and alert thresholds, helping the team detect failed API calls before they became customer tickets.
- Fixed an intermittent billing export error caused by timezone conversion differences between Java services and PostgreSQL queries, standardizing UTC handling across API, database, and Angular display layers.
- Guided engineers through code reviews focused on **Spring Security**, Angular state management, exception handling, and test coverage, raising maintainability without slowing down delivery.
- Introduced Kafka-based asynchronous processing for long-running provisioning tasks, reducing customer-facing timeout issues and making cloud resource activation workflows more resilient.
- Worked flexibly across backend, frontend, DevOps, and incident support, moving between architecture discussions, Angular implementation, API debugging, and production troubleshooting when priorities changed.

Syscom Digital — Staff Software Engineer

Remote/ Full time

Nov 2017 – Apr 2022

Bucharest, Romania

- Built telecom and digital service platforms using **Java 8–11**, **Spring Boot 2.x**, and **Angular 7–13**, supporting subscription workflows, customer onboarding, billing integrations, and internal operations dashboards.
- Designed Java REST APIs with Spring Data JPA, Hibernate, and Oracle/PostgreSQL, improving transaction processing reliability by **21%** through stronger validation and cleaner error handling.
- Migrated legacy AngularJS screens into **Angular 8–11**, replacing controller-heavy pages with modular components, reactive forms, and RxJS streams while keeping business workflows stable.
- Resolved a major production defect where duplicate customer activation requests created inconsistent provisioning records, fixing it with idempotency keys, database constraints, and retry-safe service logic.
- Improved API performance by **17%** after identifying slow Hibernate queries, adding proper indexes, simplifying joins, and replacing unnecessary eager loading with targeted fetch strategies.
- Implemented a self-service order tracking feature with Angular Material, REST polling, and role-based visibility, helping customer support teams reduce manual lookup work during peak request periods.
- Upgraded core services from **Java 8** toward **Java 11**, updating Maven builds, CI images, TLS settings, and dependencies that had started creating security and compatibility issues.
- Built reusable Angular libraries for tables, filters, form validation, and modal workflows, making feature teams faster and reducing duplicated frontend logic across multiple portals.
- Improved Jenkins pipelines with automated JUnit, Mockito, SonarQube checks, and environment-specific deployment stages, reducing failed deployments by **14%** across test and staging environments.
- Collaborated with product owners, QA engineers, and infrastructure teams to translate telecom workflow issues into stable Java services and practical Angular user interfaces.

Tessenderlo Group — Senior Software Engineer

Remote/ Full time

Aug 2015 – Oct 2017

Brussel Metropolitan Area

- Delivered enterprise supply chain and operations applications using **Java 8**, **Spring Boot 1.5–2.x**, and **Angular 2–5**, supporting procurement, inventory visibility, and internal approval processes.
- Migrated selected Java EE modules into Spring Boot services, reducing deployment complexity by **19%** and helping teams move away from heavy application server configuration.
- Implemented Angular approval screens with reactive forms, reusable validation rules, and service-driven data loading, giving business users clearer feedback during procurement and inventory updates.
- Fixed a critical issue where inventory adjustments were saved twice during slow network conditions, solving it with backend transaction checks and disabled-submit behavior in Angular forms.
- Refactored old JDBC-heavy reporting code into Spring Data repositories and service layers, improving maintainability while preserving existing SQL logic required by business reporting teams.
- Improved batch processing reliability by **16%** through better exception handling, retry logic, and clearer operational logging for failed warehouse synchronization jobs.
- Supported migration from older JSP-based internal pages into early **Angular 2–4** applications, carefully separating frontend routing from Java backend responsibilities.
- Introduced JUnit and Mockito coverage around pricing and stock calculation services, catching edge cases before release and making later refactoring safer for the engineering team.
- Worked across Java backend, Angular frontend, database scripts, and production support, adapting quickly when business-critical supply chain incidents needed immediate technical ownership.

Tessenderlo Group — Software Engineer

Hybrid/ Full time

Sep 2011 – Jul 2015

Brussel Metropolitan Area

- Developed internal enterprise systems using **Java 6–8**, Spring MVC, Hibernate, JSP, and early REST services, supporting finance, logistics, and operational reporting workflows.
- Built and maintained Java web modules for purchase orders, approval routing, and supplier data management, improving manual processing efficiency by **15%** for internal business teams.
- Implemented REST endpoints to replace several SOAP-heavy integration flows, reducing integration errors by **12%** and making partner system communication easier to monitor.
- Fixed a recurring Hibernate lazy-loading issue that caused runtime errors in reporting pages by restructuring service boundaries and loading required relationships explicitly.
- Improved legacy UI behavior with JSP, jQuery, Bootstrap, and server-side validation, keeping the interface practical for the period before Angular became the standard frontend choice.

- Supported early modernization work by preparing Java services for future Angular migration, separating presentation logic from business rules and cleaning controller responsibilities.
- Improved SQL query performance for reporting screens by adding indexes, rewriting joins, and reducing unnecessary database round trips during large monthly data exports.
- Coordinated with QA and business users to reproduce production defects, write clear fix notes, and release stable patches without creating regressions in connected workflows.

Tessenderlo Group — Software Developer

Hybrid/ Full time

Jun 2009 – Aug 2011

Brussel Metropolitan Area

- Built and maintained Java enterprise application features using **Java 6**, Spring Framework, Hibernate, JSP, Servlets, and Oracle SQL for internal finance and operations teams.
- Resolved common production bugs related to null handling, invalid form submissions, and inconsistent database records by improving validation and adding safer service-layer checks.
- Created reporting and export features with Java, SQL, and Apache POI, reducing manual spreadsheet preparation effort by **13%** for recurring operational reports.
- Supported gradual codebase cleanup by extracting duplicated business logic from JSP pages into Java service classes, making later maintenance easier for senior engineers.
- Worked closely with senior developers to learn enterprise release processes, version control discipline, database migration scripts, and practical debugging across Java web applications.

EDUCATION

KU Leuven — Master's Degree, Computer Science

Sep 2003 – May 2009
