

MARK HANEY

SENIOR FULL-STACK JAVA ANGULAR ENGINEER

Dardanelle, AR

<https://www.linkedin.com/in/markhaney-33b675ba>

+1 (430) 279-2231 | markhaney.dev@outlook.com

PROFESSIONAL SUMMARY

Senior **Java Angular Full-Stack Engineer** with 12+ years of experience in property technology, nonprofit SaaS, civic technology, and cloud-based enterprise platforms, specializing in **Java 8–21**, **Spring Boot 2.x–3.x**, **Angular 8–21**, REST APIs, microservices, PostgreSQL, MongoDB, AWS, Docker, Kubernetes, and CI/CD. Experienced in modernizing legacy systems, resolving production defects, improving API performance, migrating older AngularJS and Java services to newer versions, and delivering secure, scalable features that improve reliability, maintainability, and user experience across complex business workflows.

TECH SKILLS

- ❖ **Languages:** **Java 8–21**, TypeScript 3.x–5.x, JavaScript ES6+, SQL, HTML5, CSS3
- ❖ **Backend:** **Spring Boot 2.x–3.x**, Spring MVC, Spring Security, Spring Data JPA, Hibernate 5.x–6.x, REST APIs, Microservices, Maven, Gradle
- ❖ **Frontend:** **Angular 8–21**, Angular Material, RxJS, NgRx, Reactive Forms, TypeScript, Bootstrap, SCSS
- ❖ **Databases:** PostgreSQL, MySQL, MongoDB, Redis, SQL Server
- ❖ **Cloud & DevOps:** AWS EC2, S3, RDS, Lambda, CloudWatch, Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI
- ❖ **Testing:** JUnit 4–5, Mockito, Jest, Jasmine, Karma, Cypress, Postman, Unit Testing, Integration Testing
- ❖ **Architecture:** Microservices, Event-Driven Architecture, API Gateway, Domain-Driven Design, Clean Architecture, System Design
- ❖ **Tools:** Git, Jira, Confluence, SonarQube, Swagger/OpenAPI, IntelliJ IDEA, VS Code, Agile/Scrum

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Led full-stack development for a SaaS analytics and relationship intelligence platform using **Java 21**, **Spring Boot 3**, **Angular 15–21**, PostgreSQL, MongoDB, AWS, Docker, and Kubernetes.
- ❖ Designed scalable **Spring Boot microservices** for customer insights, account activity tracking, and workflow automation, improving backend response consistency by **27%** through query tuning and service-level caching.
- ❖ Migrated legacy Angular modules from older component patterns to **Angular 15 reactive architecture**, reducing frontend maintenance issues and improving page stability across dashboard-heavy screens.
- ❖ Implemented secure REST APIs with **Spring Security**, JWT validation, role-based authorization, and audit logging to support enterprise customers with strict access-control requirements.

- ❖ Resolved production memory issues caused by inefficient MongoDB aggregation pipelines by redesigning indexes, splitting large queries, and adding pagination for high-volume customer activity data.
- ❖ Built reusable **Angular Material** components for tables, filters, modals, and permission-based actions, helping product teams deliver new dashboard features faster and with fewer UI regressions.
- ❖ Improved CI/CD pipelines with GitHub Actions, Docker image validation, automated tests, and deployment checks, reducing release rollback risk across staging and production environments.
- ❖ Introduced structured exception handling, correlation IDs, and centralized logs through CloudWatch, making root-cause analysis faster during API timeout and authentication-related incidents.
- ❖ Optimized PostgreSQL reporting queries by adding composite indexes, improving joins, and refactoring slow repository methods that previously caused dashboard delays during peak usage.
- ❖ Collaborated with product managers and UX teams to convert business requirements into technical designs, API contracts, database changes, and release-ready Angular workflows.
- ❖ Mentored engineers on **Java 17**, Angular best practices, unit testing, code review quality, and microservice boundaries to improve team delivery standards and long-term maintainability.
- ❖ Supported production deployments, incident reviews, performance monitoring, and architecture decisions while maintaining ownership of critical customer-facing platform modules.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Developed property management and financial workflow applications using **Java 11**, **Spring Boot 2.x**, **Angular 10–13**, PostgreSQL, Redis, AWS, Docker, Jenkins, and REST APIs.
 - ❖ Built tenant communication, payment workflow, and document management features with **Angular reactive forms**, Spring services, and database-backed validation for high-volume business operations.
 - ❖ Migrated multiple frontend sections from older Angular patterns to **Angular 12**, improving component reuse and reducing UI defect reports after release stabilization.
 - ❖ Refactored monolithic service logic into smaller **Spring Boot** modules with clearer domain boundaries, reducing duplicate business rules and improving maintainability across payment workflows.
 - ❖ Fixed recurring production bugs around failed payment status synchronization by adding idempotent API handling, retry-safe processing, and improved transaction logging.
 - ❖ Improved API latency by **31%** for frequently used property search and ledger screens through SQL query optimization, Redis caching, and better repository-layer filtering.
 - ❖ Implemented role-based permissions for owners, managers, and internal support users using **Spring Security**, route guards, and frontend visibility rules in Angular.
 - ❖ Created automated test coverage with JUnit, Mockito, Jasmine, and Cypress for critical workflows, reducing regression defects during sprint releases and hotfix deployments.
 - ❖ Worked closely with QA and support teams to reproduce customer-reported issues, analyze logs, patch backend defects, and verify fixes in lower environments before production rollout.
 - ❖ Participated in design reviews, code reviews, Agile planning, and release coordination while helping junior developers improve Java, Angular, testing, and debugging practices.
-

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Built nonprofit fundraising and donor management features using **Java 8**, Spring MVC, Hibernate 5, Angular 6–8, SQL Server, REST APIs, Jenkins, and Git.
- ❖ Developed donation processing, donor search, campaign tracking, and reporting screens with **Angular**, improving staff productivity for nonprofit administrators managing large supporter records.
- ❖ Modernized legacy JSP and jQuery screens into **Angular 7** components, reducing UI-related support tickets and improving consistency across fundraising workflows.
- ❖ Created backend REST endpoints with Spring MVC and Hibernate, including validation, pagination, filtering, and secure access checks for donor and campaign data.
- ❖ Resolved database timeout issues in donor reporting by optimizing SQL joins, adding indexes, and reducing unnecessary eager loading in Hibernate mappings.
- ❖ Implemented reusable form validation, error messaging, and loading-state patterns in Angular to make complex donation workflows easier for users to complete.
- ❖ Improved release quality by expanding JUnit and integration test coverage for payment-related services, helping reduce regression defects by **17%** during quarterly releases.
- ❖ Collaborated with product owners, QA engineers, and database teams to deliver secure nonprofit SaaS features aligned with compliance and customer requirements.
- ❖ Supported production issue analysis by reviewing application logs, reproducing edge cases, and delivering targeted patches for broken reports and failed donor updates.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Developed civic engagement and government workflow applications using **Java 7–8**, Spring Framework, AngularJS, Bootstrap, MySQL, REST APIs, Jenkins, and Linux deployments.
 - ❖ Built public meeting, agenda management, and citizen communication features that helped government users manage content, documents, and notifications more efficiently.
 - ❖ Migrated selected UI modules from server-rendered pages to **AngularJS**, improving user interaction speed and reducing manual refresh issues.
 - ❖ Implemented Java REST services for document search, agenda publishing, and user administration with validation, exception handling, and role-based access logic.
 - ❖ Fixed production defects related to file uploads, malformed agenda metadata, and inconsistent user permissions by improving backend validation and frontend error handling.
 - ❖ Improved MySQL query performance for document lookup screens by adding indexes, tightening filters, and reducing repeated service calls from AngularJS controllers.
 - ❖ Wrote unit tests, deployment notes, and support documentation that helped reduce repeated troubleshooting effort by **16%** during release cycles.
 - ❖ Worked in Agile teams with developers, QA, business analysts, and support engineers to deliver stable features for government and public-sector customers.
-

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Supported internal IT service and customer operations systems using **Java 7**, Spring, JSP, JavaScript, jQuery, Bootstrap, MySQL, SVN, and basic Linux scripting.
- ❖ Built small enhancements for ticket tracking, customer records, service order screens, and internal reporting while learning enterprise coding standards and release practices.
- ❖ Fixed UI bugs, form validation issues, broken SQL filters, and backend null-pointer errors by debugging Java services, JSP pages, and database queries.
- ❖ Created simple REST-style endpoints and reusable Java utility methods that reduced duplicate logic in customer service workflows.
- ❖ Assisted senior engineers with testing, deployment preparation, documentation, and production support while strengthening skills in **Java**, SQL, Agile, and application troubleshooting.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
