

MARK HANEY

SENIOR PYTHON + VUE.JS FULL-STACK ENGINEER

Dardanelle, AR

<https://www.linkedin.com/in/markhaney-33b675ba>

+1 (430) 279-2231 | markhaney.dev@outlook.com

PROFESSIONAL SUMMARY

Staff Software Engineer with 10+ years of experience in SaaS, PropTech, nonprofit CRM, GovTech, and managed IT industries, specializing in **Python 3.8–3.12**, **Django 3.2–5.0**, **FastAPI 0.95–0.115**, **Vue.js 2.6–3.5**, and **TypeScript 4.7–5.5**. Strong background designing secure APIs, multi-tenant dashboards, workflow automation, cloud deployments, CI/CD pipelines, and event-driven services. Known for modernizing legacy systems, reducing production defects, improving performance by measurable percentages, mentoring teams, and delivering maintainable full-stack platforms across AWS, Docker, Kubernetes, PostgreSQL, Redis, MongoDB, and Agile environments.

TECH SKILLS

- ❖ **Backend:** Python 3.8–3.12, Django 3.2–5.0, FastAPI 0.95–0.115, Flask 2.x–3.x, Celery, REST API, GraphQL, Microservices
- ❖ **Frontend:** Vue.js 2.6–3.5, Nuxt 2–3, TypeScript, JavaScript ES6+, Pinia, Vuex, Composition API, Vite, Webpack
- ❖ **Database:** PostgreSQL, MongoDB, MySQL, Redis, SQLAlchemy, Django ORM
- ❖ **Cloud & DevOps:** AWS, Docker, Kubernetes, GitHub Actions, GitLab CI, Terraform, Nginx, Linux, CI/CD, Blue-Green Deployment
- ❖ **Testing & Quality:** Pytest, Jest, Cypress, Playwright, Unit Testing, Integration Testing, Contract Testing, SonarQube
- ❖ **Architecture:** Microservices, Event-Driven Architecture, Multi-Tenant SaaS, Domain-Driven Design, API Gateway, Observability

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Led development of a **Python 3.10–3.12** and **Vue.js 3.3–3.5** SaaS analytics platform used by customer success teams to manage relationship intelligence, workflow automation, and account health visibility.
- ❖ Designed high-performance **FastAPI 0.100+** services with PostgreSQL, Redis caching, and background workers, improving dashboard response time by **28%** during peak usage.
- ❖ Migrated legacy Vue 2 modules into **Vue 3 Composition API**, Pinia, and Vite, reducing frontend bundle size while keeping feature parity across customer-facing pages.
- ❖ Resolved a recurring production issue where duplicate webhook events created inconsistent account records by adding idempotency keys, retry guards, and database-level uniqueness validation.
- ❖ Implemented role-based access control across API and UI layers, using JWT claims, permission middleware, and route guards to improve security for enterprise tenant workflows.
- ❖ Built reusable **Vue 3** components for filters, tables, export flows, and audit panels, helping product teams deliver new reporting features around **18%** faster.

- ❖ Improved Celery task reliability by separating long-running jobs from quick notification jobs, reducing delayed background processing incidents.
- ❖ Created automated Pytest, Cypress, and contract test coverage for critical account workflows, reducing regression bugs in release candidates.
- ❖ Refactored several Python services from large controller files into cleaner domain modules, improving maintainability and making onboarding easier for new engineers.
- ❖ Implemented observability with structured logging, distributed trace IDs, and Grafana dashboards, reducing average production debugging time.
- ❖ Worked closely with product managers and designers to turn vague customer requirements into secure API contracts, reliable workflows, and polished Vue interfaces.
- ❖ Mentored engineers on **Python**, **Vue.js**, testing strategy, pull request quality, and production ownership while supporting Agile delivery across multiple teams.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Built property management workflow features using **Python 3.8–3.10**, Django, PostgreSQL, and **Vue.js 2.6**, supporting leasing, payments, document review, and tenant communication modules.
- ❖ Improved large report generation by replacing synchronous Python logic with Celery workers and optimized SQL queries, reducing timeout errors by **34%**.
- ❖ Migrated several legacy jQuery admin screens into **Vue 2.6** components with Vuex, improving maintainability and reducing frontend defects.
- ❖ Fixed a payment reconciliation bug caused by race conditions between webhook callbacks and scheduled batch imports by adding transaction locks and retry-safe state transitions.
- ❖ Designed REST APIs for document approval flows, file metadata, and tenant notes, keeping API contracts stable for web and internal operations tools.
- ❖ Reduced PostgreSQL query cost on high-volume portfolio pages by adding composite indexes, pagination improvements, and selective prefetching in Django ORM.
- ❖ Implemented feature flags for staged rollout of leasing workflow changes, allowing support teams to validate production behavior before full customer release.
- ❖ Added Pytest and Jest coverage around payment, document, and notification flows, reducing critical regression issues across major releases.
- ❖ Partnered with DevOps to improve Docker-based local development and CI validation, helping engineers reproduce bugs faster before production deployment.
- ❖ Reviewed architecture proposals, mentored mid-level engineers, and maintained coding standards around **Python**, **Vue.js**, API design, and cloud-ready deployment.

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Developed fundraising and nonprofit CRM features using **Python 3.6–3.8**, Django, REST APIs, PostgreSQL, and **Vue.js 2.5–2.6** for donor engagement workflows.
- ❖ Implemented reusable Vue components for donor search, contribution history, campaign filters, and export modals, reducing duplicated frontend code by **23%**.

- ❖ Solved an issue where donor import jobs silently skipped malformed rows by adding validation reports, clearer error handling, and resumable import batches.
- ❖ Optimized API endpoints used by campaign dashboards through query profiling and serializer cleanup, improving average response time by **27%**.
- ❖ Migrated older server-rendered templates into Vue-powered sections without disrupting existing Django routes or internal user permissions.
- ❖ Added audit logging for sensitive donor updates, helping compliance teams track record changes and investigate incorrect data modifications faster.
- ❖ Created integration tests for donation import, campaign segmentation, and user permission flows, reducing QA rework.
- ❖ Worked with support teams to diagnose production issues, reproduce customer-reported bugs, and release safe patches through controlled deployment windows.
- ❖ Contributed to Agile ceremonies, code reviews, and technical design discussions focused on reliability, maintainability, and nonprofit business workflows.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Built GovTech workflow modules using **Python 3.4–3.6**, Flask, Django, PostgreSQL, and early Vue-based internal widgets for public-sector content and communication tools.
- ❖ Improved document publishing performance by optimizing Python service logic and database access patterns, reducing processing time by **25%** for large records.
- ❖ Fixed a recurring issue where scheduled public notices failed after partial upload errors by adding retry handling, checksum validation, and clearer failure states.
- ❖ Created REST endpoints for content approval, notification history, and public-facing metadata, supporting internal admin panels and citizen communication workflows.
- ❖ Helped migrate older procedural Python scripts into structured Flask services, improving testability and reducing operational support issues.
- ❖ Built lightweight frontend interfaces with JavaScript, Bootstrap, and selective **Vue 1.x** components where they improved admin productivity without overengineering.
- ❖ Added unit tests and smoke tests for publishing workflows, helping the team catch broken approval paths before release.
- ❖ Collaborated with QA, product owners, and government client stakeholders to deliver stable features under strict accessibility and reliability expectations.

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Supported managed IT service tools using **Python 2.7–3.3**, JavaScript, jQuery, MySQL, and internal automation scripts for ticketing, reporting, and asset workflows.
- ❖ Automated repetitive support reporting tasks with Python scripts, reducing manual spreadsheet preparation for operations and account teams.
- ❖ Fixed data sync issues between internal inventory tables and customer reports by adding validation checks, safer SQL updates, and clearer exception logging.

- ❖ Built small dashboard enhancements with HTML, CSS, JavaScript, and jQuery while learning production debugging, version control, and Agile delivery practices.
- ❖ Assisted senior engineers with bug reproduction, test case writing, and deployment verification, building a strong foundation in reliable software engineering.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
