

MARK HANEY

STAFF SOFTWARE ENGINEER | REACT + NODE.JS FULL-STACK ENGINEER | TECHNICAL LEAD

Dardanelle, AR

<https://www.linkedin.com/in/markhaney-33b675ba>

+1 (430) 279-2231 | markhaney.dev@outlook.com

PROFESSIONAL SUMMARY

Staff Software Engineer specializing in full-stack SaaS, property technology, civic technology, nonprofit CRM, and managed IT service platforms, with strong hands-on experience delivering **React 15–18, Node.js 6–20, Express 4, TypeScript 3–5, MongoDB 3–7, PostgreSQL 9–16**, AWS, Docker, CI/CD, and microservice-based systems across modern production environments. Skilled in building secure APIs, reusable UI platforms, scalable data workflows, cloud deployments, automated testing, performance optimization, legacy migration, and team-level engineering standards that improve release speed, reduce production defects, and support long-term product growth safely.

TECH SKILLS

- ❖ **Frontend:** React 15–18, TypeScript 3–5, JavaScript ES6+, Redux, React Query, Next.js 10–14, HTML5, CSS3, Tailwind CSS, Material UI, Jest, React Testing Library, Cypress
- ❖ **Backend:** Node.js 6–20, Express 4, NestJS 8–10, REST API, GraphQL, WebSocket, JWT, OAuth2, RBAC, API Gateway, Microservices
- ❖ **Database:** MongoDB, PostgreSQL, MySQL, Redis, DynamoDB, Mongoose, Prisma, TypeORM, Query Optimization
- ❖ **Cloud / DevOps:** AWS, Docker, Kubernetes, GitHub Actions, Jenkins, CircleCI, Terraform, NGINX, CloudWatch, S3, Lambda, ECS, CI/CD
- ❖ **Engineering:** System Design, Agile Methodologies, Unit Testing, Integration Testing, Code Review, Mentoring, Performance Tuning, Production Support

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Led the design and delivery of **React 18, Node.js 18/20, TypeScript**, and **MongoDB** based SaaS modules for customer-facing analytics, workflow automation, and internal operations.
- ❖ Architected reusable **React component libraries** with strict TypeScript contracts, reducing duplicated frontend logic and improving delivery consistency across multiple product teams.
- ❖ Built scalable **Node.js microservices** with Express 4 and event-driven patterns, improving API response reliability and reducing timeout-related production issues.
- ❖ Migrated legacy React 16 class components into **React 18 functional components**, hooks, suspense-ready patterns, and cleaner state boundaries without disrupting active customer workflows.
- ❖ Resolved a recurring production bug where stale cached API responses caused incorrect dashboard counts, fixing it through cache-key normalization, Redis TTL tuning, and regression coverage.
- ❖ Implemented new workflow features with **role-based permissions**, audit history, bulk actions, and async job processing to support enterprise users managing high-volume operational records.
- ❖ Improved MongoDB aggregation pipelines, compound indexes, and pagination strategies, reducing heavy report execution time by **31%** during peak customer usage.

- ❖ Created CI/CD pipelines with GitHub Actions, Docker image scanning, environment promotion gates, and automated rollback checks for safer production deployments.
- ❖ Partnered with product managers, QA engineers, and DevOps teams to convert vague business requirements into secure, testable, and maintainable engineering solutions.
- ❖ Mentored mid-level engineers on **system design**, API versioning, React performance profiling, and production debugging through code reviews and architecture sessions.
- ❖ Introduced structured logging, request correlation IDs, and alert rules that helped engineers identify API failures faster and reduce repeated incident investigation time.
- ❖ Balanced hands-on development with technical leadership by reviewing architecture decisions, removing blockers, and keeping implementation flexible for changing roadmap priorities.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Built property management features using **React 16/17**, **Node.js 10/12/14/16**, **TypeScript 3/4**, PostgreSQL, Redis, and AWS services for high-traffic SaaS workflows.
- ❖ Developed tenant, payment, document, and reporting interfaces with reusable **React components**, reducing repeated UI implementation effort by across related feature teams.
- ❖ Implemented secure **Node.js REST APIs** with validation, authentication, background jobs, and database transaction handling for business-critical property operations.
- ❖ Migrated older JavaScript modules into **TypeScript 4**, improving compile-time safety and reducing frontend runtime errors after phased rollout.
- ❖ Fixed a production issue where payment status updates were delayed because queue workers retried failed jobs without proper idempotency protection.
- ❖ Designed an idempotent processing flow using Redis locks, database constraints, and retry-safe handlers to prevent duplicate payment events and incorrect user notifications.
- ❖ Improved PostgreSQL query plans, indexes, and API pagination, reducing slow dashboard load time by **29%** for large property portfolios.
- ❖ Implemented Cypress and Jest coverage for high-risk user flows, including payment submission, lease document upload, and permission-sensitive admin actions.
- ❖ Collaborated with design, QA, security, and infrastructure teams to deliver features from discovery through release while maintaining stable sprint delivery.
- ❖ Supported production incidents by analyzing logs, reproducing edge cases, deploying hotfixes, and writing post-incident notes for long-term prevention.

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Delivered nonprofit CRM and fundraising platform features using **React 15/16**, **Node.js 6/8**, Express 4, JavaScript ES6, SQL Server, and REST services.
- ❖ Built donor management UI screens with **React**, reusable form validation, and accessible component patterns to improve data entry accuracy for nonprofit users.
- ❖ Developed **Node.js API endpoints** for campaign records, donation workflows, and reporting exports while maintaining compatibility with existing enterprise services.

- ❖ Helped migrate selected legacy jQuery views into React 16 components, reducing UI maintenance effort by for frequently updated CRM screens.
- ❖ Fixed a permission bug where users could see restricted campaign metadata due to inconsistent authorization checks between frontend routes and backend APIs.
- ❖ Standardized backend authorization middleware, added API-level permission tests, and documented access rules to prevent future role-based security gaps.
- ❖ Improved report export processing by optimizing database queries and async job handling, reducing large export failures by during peak usage.
- ❖ Worked with QA to expand unit and integration tests around donation workflows, campaign updates, and organization-level access boundaries.
- ❖ Participated in Agile planning, peer code reviews, release support, and cross-team debugging to keep product changes reliable and maintainable.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Developed civic technology platform features using **Node.js**, Express, JavaScript, jQuery, Bootstrap, and PostgreSQL.
- ❖ Built public-facing forms, admin workflows, and notification features that supported government teams managing citizen communication and digital service requests.
- ❖ Implemented **Node.js API services** for request routing, status updates, email notifications, and reporting workflows used by internal and external users.
- ❖ Migrated older Express 3 routing patterns to **Express**, improving middleware structure and making authentication, validation, and error handling easier to maintain.
- ❖ Solved a recurring issue where citizen request forms failed silently after attachment upload errors, adding explicit validation, retry messaging, and server-side logging.
- ❖ Optimized PostgreSQL queries and backend response payloads, reducing average admin dashboard loading time for large municipal accounts.
- ❖ Worked flexibly across frontend fixes, backend API development, SQL troubleshooting, QA support, and release validation based on sprint priorities.

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Supported internal managed IT service tools using **Node.js**, Express, JavaScript, jQuery, Bootstrap, and MySQL.
- ❖ Built small dashboard features, ticket workflow updates, and backend utility scripts that helped operations teams track customer service activity more clearly.
- ❖ Fixed UI and backend bugs involving incorrect ticket status changes, improving service desk workflow accuracy by after validation rules were added.
- ❖ Assisted with migration from older callback-heavy Node.js code toward cleaner Express 3 route structure, shared middleware, and reusable helper functions.
- ❖ Worked closely with senior developers to learn production debugging, Git workflows, unit testing basics, database queries, and reliable release practices.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
