

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522
<https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Full-Stack Developer with over 10 years of experience delivering scalable .NET and React-based applications across finance, health, and enterprise SaaS. Expertise in building RESTful APIs, architecting robust backends with .NET C# and Entity Framework Core, and crafting performant UIs in ReactJS and React Native. Adept at cloud migration with Azure, SQL optimization, and full CI/CD implementation. Strong communicator and team collaborator with a track record of modernizing legacy systems and mentoring teams through high-impact projects.

Technical Skills

- ❖ **Languages:** C#, JavaScript, TypeScript, T-SQL, Python, HTML/CSS
- ❖ **Frameworks:** .NET 6/7, ASP.NET Core, Entity Framework Core, ReactJS, React Native, Redux, Bootstrap
- ❖ **Cloud:** Azure (Functions, App Services, Azure SQL), AWS (EC2, Lambda, S3), GCP (Cloud SQL, Firebase)
- ❖ **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB, Redis
- ❖ **DevOps:** GitHub Actions, Docker, Kubernetes, CI/CD pipelines, Git
- ❖ **Testing:** xUnit, NUnit, Jest, Moq
- ❖ **Other:** RESTful API Design, Microservices, Agile/Scrum, SOLID Principles, Clean Architecture

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- Delivered enterprise-grade applications using .NET C#, ASP.NET Core, and EF Core, supporting multi-tier architecture and complex financial rules engine.
- Developed cross-platform front-end features in ReactJS and React Native, enhancing usability and accessibility for fintech dashboard components.
- Built and maintained RESTful APIs integrating with external systems via OAuth2 and webhook callbacks, improving client onboarding automation.
- Integrated Redis caching and SQL Server optimization for high-frequency trading reports, reducing query latency from 2.3s to 200ms.
- Initiated CI/CD pipeline migration from Jenkins to GitHub Actions with YAML-based workflows, shortening release cycles by 50%.
- Collaborated with product owners and QA using Jira for user stories, acceptance criteria, and regression suite planning in a SCRUM environment.
- Instrumented Azure Monitor and Application Insights for real-time API diagnostics, alerts, and end-to-end transaction tracing.

- Partnered with DBAs to normalize legacy schemas and introduced temporal tables for historical auditing and point-in-time restore capabilities.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- Delivered enterprise-grade applications using .NET C#, ASP.NET Core, and EF Core, supporting multi-tier architecture and complex financial rules engine.
- Developed cross-platform front-end features in ReactJS and React Native, enhancing usability and accessibility for fintech dashboard components.
- Built and maintained RESTful APIs integrating with external systems via OAuth2 and webhook callbacks, improving client onboarding automation.
- Integrated Redis caching and SQL Server optimization for high-frequency trading reports, reducing query latency from 2.3s to 200ms.
- Initiated CI/CD pipeline migration from Jenkins to GitHub Actions with YAML-based workflows, shortening release cycles by 50%.
- Collaborated with product owners and QA using Jira for user stories, acceptance criteria, and regression suite planning in a SCRUM environment.
- Instrumented Azure Monitor and Application Insights for real-time API diagnostics, alerts, and end-to-end transaction tracing.
- Partnered with DBAs to normalize legacy schemas and introduced temporal tables for historical auditing and point-in-time restore capabilities.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- Contributed to .NET-based CMS framework with plug-in architecture using C# and ASP.NET MVC, supporting large-scale government websites.
- Built feature-rich UIs using ReactJS with TypeScript, Material-UI, and Redux-Saga for async flow management across role-based modules.
- Created stored procedures and custom SQL Server indexes, improving data access patterns for CMS search and reporting engine.
- Integrated identity-based access control using ASP.NET Identity and OAuth, securing 200K+ user accounts with 2FA and refresh tokens.
- Built automated integration test suite with Selenium and Postman for validating API contracts and regression scenarios.
- Established Git branching model and pull request review process that reduced release defects by 30% across 18 months.
- Participated in Agile planning, backlog grooming, and sprint retrospectives while championing TDD and pair programming.
- Coordinated release schedules with external vendors and implemented feature toggles for controlled rollout in production.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- Built internal tools in .NET MVC for Microsoft Office telemetry team, focusing on data analysis pipelines and visualization dashboards.
- Designed custom log parsers using C# and LINQ to generate insights from crash reports and performance counters across Windows builds.
- Created SQL Server stored procs to automate anomaly detection reports sent to PM teams, reducing manual log triaging efforts.
- Developed RESTful endpoints and integrated with Azure Table Storage for time-series telemetry archiving.
- Worked cross-functionally with designers and testers to validate UX hypotheses via A/B testing experiments on live traffic.
- Participated in weekly design reviews and contributed code to production repository used by internal dev teams globally.
- Leveraged PowerShell scripts for automating nightly builds and unit test coverage reports.
- Presented internship results to senior engineers and received offer for full-time position post-graduation.

Projects

✓ **Cloud Cost Analyzer** – *Azure + React + .NET Core*

Built a cost-optimization dashboard that pulls Azure billing data via REST API and aggregates usage by service and department. Enabled 20% reduction in redundant compute spend.

✓ **EF Core Migration Assistant** – *C# .NET CLI Tool*

CLI utility to scan legacy Entity Framework projects and auto-generate EF Core-compatible models, configurations, and migration scripts. Used by 3 internal teams.

✓ **React Native Incident Tracker** – *React Native + Firebase*

Mobile-first incident tracking app built for field operations team with offline-first sync logic and push notifications integrated with Firebase Cloud Messaging.

Certifications

- **Microsoft Certified: Azure Developer Associate (AZ-204)**
- **AWS Certified Developer – Associate**
- **Google Cloud Associate Cloud Engineer**
- **EF Core Performance Tuning (Pluralsight)**
- **Certified SQL Developer (MSSQLTips)**

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
